Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas

Vol. 21 No. 17 | Lancaster Farming, Saturday, March 13, 1976 | $3.00 Per Year

Agricultural future is bright

By DIETER KRIEG

SCHAEFFERSTOWN — "There's a new awareness of agriculture sweeping across the country ... I am extremely optimistic about the future of agriculture," James Beattie, Dean of the College of Agriculture at Penn State, told approximately 200 people at a dinner here on Thursday night. The occasion was the 50th annual meeting of the Lebanon County Cooperative Extension Service.

"In the past ten years," the Dean began, "the amount of man power needed for food production has decreased by 25 per cent, and the farmers' productivity has gone up by 16 per cent within that time. The costs of food takes less than 17 per cent of the average consumer's disposable income." Acknowledging that the American housewife has had to pay more for most items in the super market, Beattie explained that it was due to the world-wide demand on American food

Hog cholera update

Disease confined outside state

By MELISSA PIPER

LANCASTER — After a two-week battle with hog cholera, USDA task forces in New England and New Jersey have been encouraged by no new confirmations of the disease in those areas. In a phone interview with Werner Hietsch, USDA information specialist late this week, the official noted that restrictions on movement of hogs had eased and that swine going directly to market had been allowed to move in New Jersey except in the Glouchester County area.

In Massachusettes movement of slaughter hogs had also begun by Wednesday in all areas of the state except four counties which were under federal quarantine.

No newly confirmed cases of hog cholera had sparked the movement of slaughter hogs although under strict

Nitrogen stabilizer developed

Editor's Note: A nitrogen fertilizer additive which a Purdue university plant specialist describes as a product which "will open a whole new ball game in agriculture," was recently introduced by Dow Chemical Company. The result of more than a dozen years of research at Dow, as well as several agricultural colleges, the product — N-Serve — was unveiled to 50 agricultural editors and broadcasters at a press conference in Hollywood, Fla. Lancaster Farming was represented and a summary of Dow's report follows:

HOLLYWOOD, Fla. — "N-Serve," which boosted crop yields for more than 100 growers in a trial program during 1975, will become plentifully available for the first time this year — in about July — soon enough for its Fall application which has already proved to be uniquely valuable in the Corn Belt.

Shortly after mid-year, Dow Chemical U.S.A. will place "on stream" a new plant to produce N-Serve, a nitrapyrin fertilizer additive. N-Serve reduces naturally-occurring losses of nitrogen from the soil. Consequently, when applied

Dairy management reviewed

By DIETER KRIEG

LANCASTER — Lancaster County's annual Dairy Day, held here at the Farm and Home Center recently, drew a steady crowd of visitors throughout a day which was marked by cool temperatures and nearly constant drizzling. Five major management topics were presented by specialists from Penn State, and enough agri-businesses showed up with exhibits to completely surround the auditorium. Several larger pieces of equipment, such as manure spreaders and pumps were on display outside. A summary of highlights from the 6-hour program follows:

COOPERATIVES

The need for farmer cooperation was pointed out by the presentation of a movie entitled "Chaos or Cooperation," which showed news reels from past decades and illustrated the involvenemt of modern-day farmer cooperatives. Hectic marketing situations which occasionally resulted in brawls and milk dumped onto streets, could possibly have given viewers the impression that things have

Fire destroys two barns

By MELISSA PIPER

LANCASTER - Two barn fires within a three mile stretch of the Elizabethtown - Manheim Road resulted in $70,000 worth of damage and losses this week.

On Saturday evening, firemen from Elizabethtwon and Rheems responded to a barn fire at the Clayton Risser farm, Elizabethtown R3. The Risser family had called in the alarm but as firemen reached the scene at 11 p.m. the barn was already engulfed in flames.

Although the cause of the fire is still under investigation by county fire officials, it is believed that stored hay in the barn fueled the flames.

Robert Zeager, Elizabethtown deputy chief also noted that the "slate roof on the barn held the heat in," adding to problems in fighting the blaze. Several firemen receved minor injuries from falling debris and one volunteer, Barry Reem of Mount Joy, fell and suffered a sprained ankle

Vintage Sales Stables are sold

VINTAGE — Controlling interest in the Vintage Sales Stables changed hands here this week when Mr. and Mr. and Mrs. L. Robert Frame of Uwchland (Eagle), Chester County, purchased shares formerly belonging to Harold Hess and John Huber.

A stockholders' and board of directors' meeting this past Wednesday evening declared that Frame would take over as the new manager of the market, while his wife, Elaine, would become the new secretary-treasurer. Marlin Irwin was selected as the new vice president.

Frame is no newcomer to the business. He told LANCASTER FARMING this week that he and his wife had at one time owned and operated the former Exton Livestock Market. Upon acquiring it, they changed the name to "Whitford Sales Co." The livestock auction went out of business in 1965 due to expansion of nearby metropolitan Philadelphia.

The Frames, however, remained in business by operating a sales company by the same name (Whitford Sales Co.) which specializes in farm sales and auctions. They are continuing that business while assuming controlling interest at the Vintage market.

"I want to continue this livestock auction and im-

Local Grain

Friday, March 12

These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn and soybean meal which are per ton.

The average local grain prices quoted Friday, Mar. 12 are as follows:

	Bid+	Offered+
Earl Corn	63.00	72.00
Shelled Corn	2.67	2.91
Barley	1.89	2.12
Oats		
Local	1.55	1.79
Western	1.84	2.02
Wheat	3.35	3.58
Millers	3.34	3.57
Soybeans	4.55	—
Soybean Meal		173.50

+Bid is the price the dealer will buy from the farmer delivered to the mill. Offered is the price the dealer will sell for at his mill.

New From Pennfield

Cut beef cattle feed costs 10.6%

Earn $960* more profit per hundred head

It's true, Pennfield Feed's new 40% concentrate #726 or silage balancer #746 will assure you equal weight gain with 10.6% less feed. That's the same as feeding every 11th beef cattle in your herd free. It's the same as feeding 39 extra head free when you have 100 acres planted in silage corn. In short, its another Pennfield profit maker for you, the beef cattle farmer.

Here's the story. New 726 or 746 contain a new, FDA approved non-hormonal additive called monensin sodium (monensin). It is a natural prōduct, like yeast or yogurt. And it works in the cattle's stomach to improve his natural rumen digestion and absorption of nutrients and other growth and energy products. Your cattle experience the same rate of growth with 10.6% less feed. And these new Pennfield products are 5% more efficient than similar competitive products, just now being introduced.

Monensin has been thoroughly tested in university and government studies and found both safe and effective.

So, if you want to grow every eleventh beef cattle in your herd free and increase your profit by $960 per hundred head by cutting your feed costs 10% or more, call your Pennfield man right now. Ask him about new #726 and 746.

He wants you to make more money.

Spring is here!

Only one more month before taxes due Thomas F Dewey died March 16, 1971 Spring begins March 20 at 6 50 AM Full moon March 15 Animal hibernation over Average length of days for the week, 12 hours, 3 minutes St Patrick s Day March 17 Swallows return to Capistrano, Calif this week First American opera at Met March 18, 1910 *My country is the world and my religion is to do good (T Paine)*

Old Farmer's Riddle: What has eighty eight keys but can open no door? (Answer below)

Ask the Old Farmer: In a very old family diary I read that one of my ancestors was working as a 'picker" It sounded as though he didn't care for the job, but it wasn t described I m sure it doesn't mean picking crops because the entry was made in the winter F K, Portland, Maine

In our section the man who cleaned millstones of the ground grain that became packed in their crevices was called a picker'

Home Hints: Never spin dry qui s hang them up to dry **Riddle answer** A piano

OLD FARMER'S WEATHER FORECASTS

New England: Cold, with scattered snow at first, then warming and light rain, rain ending, colder with snow in north

Greater New York-New Jersey: Week begins with snow, turning to scattered showers, then much warmer by midweek, light rain, clearing and mild latter part

Middle Atlantic Coastal: Clearing and warmer by midweek, end of week rainy, windy and mild

Canker Sores

Canker sores, which occur on the mucous membranes inside the mouth, affect 20 per cent of the population at any given time. It is estimated Agents that irritate the lining of the mouth can lower tissue resistance and cause canker sores Experts have concluded that the irksome growths are strongly inheritable Probability rates, in fact, can exceed 90 per cent when both parents have recurrent episodes A canker sore may develop in less than six hours—or over a 24-hour period

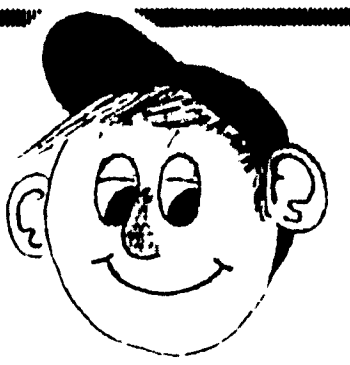
Nixnutz's Corral

By BARNEY NIXNUTZ



"All the news that's unimportant, but still interesting."

Guess again

A former farm editor from up around Mount Nittany recollects the following episode between him and another reporter. The story begins believe it or not, with the collapse of a barn floor. Several animals were trapped underneath the debris and a few were even killed. Since it happened late in the evening, the farm editor did not learn about it until he read it in the morning paper. There, right on page 1, was a picture of the tragedy. But those "cows" in the picture were a bit small, he thought. So he mentioned it to those responsible for the minor mistake, explaining that the animals in the picture were actually heifers. Understandably, he was asked to explain the difference between heifers and cows. A third employee of the paper couldn't wait to hear the answer and decided to come up with her own, which was: "A heifer is a male cow, isn't it?"

Smart rooster

Final results are not known at this writing, but I have reports that the number one rooster in the state may be about to make the most realistic decision within recent memory. For the past several months or more he had seriously been entertaining thoughts about becoming the number one rooster in the whole entire U.S. of A. After a poor showing in New Hampshire, and an even poorer one in Florida earlier this week, I have reason to believe that he may decide to give up his dream of having a big golden egg layed in front of him.

Colassal choice

Mine ears have heard the suggestion of the coming of the dairymen to the Coca-Cola Building in Lancaster for a meeting. I haven't found out yet if they decided to go marching on or if they're going to meet in surroundings belonging to one of their major competitors. If you decide to go there, boys, how about leaving all the cute little air-filled vinyl cows supended from the ceilings. And be sure to stick a "Milk Drinkers Make Better Lovers" sign on the nearest "Coke" machine. (Written with apologies to Coca-Cola and a confession that I enjoy their drink from time to time.)

Where else?

Have you heard about the young Amishman who wants to build a new chicken house for 12,000 layers? Present zoning restrictions in that township state that such a facility cannot be built without special permission from the zoning hearing board. So the Amishman appeared at a hearing for that purpose to face questioning.

Naturally, the members of the board were concerned about odors, waste disposal, and the removal of dead birds.

"How do you intend to dispose of dead chickens?" a member of the hearing board said. "I'll bury them," the farmer answered. Later a second board member asked: "... and where do you expect to bury the dead chickens?"

"In the ground, I guess," the Amishman answered to everyone's delight.

Raw blunder

A Lebanon County dairyman who sells his milk at his store in either raw or processed form, had an interesting experience with an approved inspector one day. According to his daughter, who manages the store, the inspector casually inspected equipment and products and finally grabbed a hold of a gallon of raw milk which can be legally sold if the farmer has the appropriate license. Waving the full container in front of the proprietor, he asked: "Has this milk been homogenized?"

THE 'IN' CROWD

Lesson for March 14, 1976

Background Scripture: Matthew 21:6 through 22:14.

Devotional Reading: Isaiah 55:6-13.

Several years ago, Dr. Karl Menninger wrote a book with the intriguing title, WHATEVER BECAME OF SIN? Contrary to some of his professional colleagues, this eminent psychiatrist sees the loss of the concept of sin as very harmful to both individuals and society as a whole. According to Dr. Menninger, a concept of sin is of vita' importance for a man's emotional health.

Repent and believe!

It must be acknowledged that the Christian concept of sin and the concomitant idea of repentance are not very popular today. It's not so much that people speak against these themes, but that they simply ignore them.

Many Christians seem to fall into either one or two categories in regard to this matter: either they take sin too seriously or not seriously enough. Striking a proper balance between these two extremes is often a difficult task.

The problem, of course, is not with the Christian gospel, but rather with what we make of it. On the one hand, many of us tend to focus upon others when we think of sin. The "sinner" is the other fellow, the person whose values and life style are quite different, the person who is "outside my church." For many of us the "sinner" is the non-church-goer, the frequenter of the corner bar, the user of profane language, etc. - in short: the "other guy."

Thus, we may believe in sin and repentance ... for someone else! There seems to be little need for it inside our cozy little church where we all lead respectable lives and adhere to the right doctrines. To put it somewhat crassly: When it comes to the Kingdom of God, we are the "in" crowd! Right?

Which of the two?

Wrong?

Of course, that's what was assumed by those who heard Jesus. They thought of themselves as the "in" crowd and the term "sinners" was reserved for the other guy - the people who were not very devoted to the strict observance of the law and customs of the religious elite, the tax colectors, thieves, harlots, non-Hebrews, etc. But they were very, very wrong, said Jesus: "Truly I say to you, the tax collectors and the harlots go into the kingdom of God before you" (Matt. 21:31). Unless there was some radical repentance, the "in" crowd would be OUT!

The problem was that the scribes and the pharisees focused too much on the sins of others and too little on their own sins. They were like the son in the parable that Jesus told: They say "yes" to God, but don't really do what he wants. For them, religion is simply, "talking a good game."

The real "in" crowd in the Kingdom of God are those who know that the challenge to repentance through Christ is meant for them!

To Accept Responsibility

The recent issue of whether or not Bonnie Sue Frey of Refton will be permitted to feed another 4-H Club steer at their home is an illustration of regulations and ordinances being made with very little agricultural input. To prohibit this type of youth project in a small, rural borough such as Refton appears to be bringing "down-town" living out into the rural areas. As of this date, I am not acquainted with the makers of this ordinance but surely feel that the agricultural community in that part of the county had very little to do with setting up the restrictions. We continue to urge farmers to take part in these community governing bodies and strive for regulations suitable for the area.

To Be Prepared

As expected for the past several weeks, winter weather returned to this part of the country; however, the days are longer and the sun is higher in the sky with more heat, and soon the planting season will be here. A recent visit with Mrs. Dorothy Fry, Stevens R1, of this county revealed that some folks in the northern part of Lancaster County had planted peas and onions during the warm spell the last few days in February. Most of us have had very little experience with planting so early, but no doubt these "cold weather" will survive and make a crop. However, since we are in the middle of the month of March, and since many folks try to start their gardens on St. Patrick's Day (March 17), I'd suggest that gardeners get materials and equipment on hand and ready to go. Don't wait until the weather is warm and the ground ready, only to realize that something like fertilizer, or a seed variety, is missing. Plan ahead at all times.

To Control Run-Off Water

As the population density of a community increases, the importance of controlling surplus water becomes more important; I'm referring to both water from land as well as water from barnyards and homesteads. This time of the year when we may have extra rain along with melting snow, every farmer should make special effort to be sure that water is not getting into streams, highways, or on the property of others from his livestock or poultry operation. Our local Soil Conservation District representative, Henry H. Hackman of Manheim, is working closely with the Pennsylvania Department of Environmental Resources, in checking reports of water pollution. Knowing Henry, I'm sure his evaluation of reported violations will be very practical. All producers should make a special effort to manage their operations to prevent all types of water pollution.

To Use New Feed Additive

The new feed additive named RUMENSIN is strongly recommended for all cattle feeders. This material is available through feed dealers and is to be mixed with the protein supplement. Research work shows a 10 percent savings in feed requirement. It has been cleared for use by the Food and Drug Administration. Local feeders are urged to utilize this material.

Farm Calendar

Monday, Mar. 15

Cumberland County Forage-Dairy workshops today at either of two places: Monroe Township Building, Mechanicsburg; and Shippensburg Jr. High School. Respective meeting times are 1 to 3 p.m. and 7:30 to 9:30 p.m.

New Jersey Fruit Growers meeting, 9:30 a.m. at the Watchung View Inn, north of Somerville.

Tuesday, Mar. 16

Ephrata Young Farmers meeting, 7:45 p.m. at the high school.

Garden Spot Young Farmers meet, subject: large round bales.

Chester County - farm financial management meeting, 7:45 p.m. at the Owen J. Roberts H.S. voag room

Soybean management meeting for Schuylkill County growers, 7:30 p.m. at the Mansion House Restaurant, Pine Grove.

Southeastern Penna. Poultry Banquet, 6:30 p.m. at Arner's Restaurant, Quakertown.

Wednesday, Mar. 17

Adams County Poultry Banquet, Methodist Church, Gettysburg, 6:00 p.m.

Horse nutrition and management topics to be discussed at the Montgomery County 4-H Center near Landsale, 7:30 p.m.

Thursday, Mar. 18

Ephrata Young Farmers meeting, 7:45 p.m., at the high school

Garden Spot Young Farmers' Recreation Night.

Broiler and Turkey management seminars at the Lancaster Farm and Home Center, 7:30 p.m.

Cumberland County DHIA workshop at the Extension Office meeting room 1-3 p.m.

Annual meeting of the Lancaster County Soil Conservation Service, 6:30 p.m., Good'n Plenty Restaurant, Smoketown.

AGRI-KING
KEY TO PROFIT

WHY SILO—KING WORKS

ARNALDO BURGOS
Assistant Nutritionist and Field Consultant

Silo-King is a roughage preservative that contains a combination of refined enzymes, preservatives, antioxidants and other agents.

The antioxidants stabilize the simple sugars, vitamins and other nutrients. They prevent oxygen trapped in the silage from burning these nutrients which in turn causes the silage to heat and juice. The more severe the heating and-or juicing, the greater the loss of digestible protein, energy and other nutrients.

While the antioxidants are doing their work, the enzymes start breaking down simple (sugars and starches) and complex carbohydrates (fiber) creating a very rich environment for lactic acid producing bacteria to reproduce. This speeds up the silage fermentation process and results in bringing the acidity (PH) of the silage down to a desireable PH or 4 or below quite rapidly.

Because of the rapid action of the enzymes it is possible to create this rich environment for the bacteria. As a matter of fact, that is what enzymes do: accelerate the transformation of carbohydrates to lactic acid. Higher levels of lactic acid also represents a higher concentration of energy in the silage.

Only anaerobic bacteria (live without air) can produce lactic acid fast enough to reduce the PH of the silage in the shortest possible time.

Aerobic bacteria (lives only in the presence of air) utilize oxygen to burn carbohydrates and protein, transforming them into carbon dioxide, ammonia and water. This results in the production of high levels of butyric acid which causes silage to be rancid, have a loud unpleasant smell and be unpalatable. The water released contributes to silo juicing.

Why not add only anaerobic bacteria to the silage instead of enzymes? That would be like buying cows and having no feed for them. They would simply die. Why? Because you are filling the silo with material that has been exposed to air and more air is trapped in the silo at filling time regardless of the type of storage. Therefore, the predominant bug in the silo at first is aerobic bacteria.

Even if you add tons of lactic acid producing bacteria, they cannot work efficiently in the presence of air, so that become inactive until most of the oxygen is used up. By this time most of the damage has already been done with resulting loss of energy, digestible protein and other nutrients. Palatability is also reduced which can severely effect animal performance due to a lower feed intake.

Silo-King antioxidants and preservatives make it very difficult for the undesireable aeorbic bug to find anything to eat, and you know what happens when you don't eat. At the same time enzymes are making food available for the good bug enabling him to reproduce rapidly, speed up the entire fermentation process resulting in the highest quality silage possible.

Only Silo-King contains this secret formula of refined enzymes (not crude enzyme by-products) preservatives and antioxidants.

You wouldn't think of planting corn without using a weed killer. Neither should you think of making silage without using Silo-King.

SPECIAL WINTER PRICE FOR SILO—KING ENDS MARCH 31.

CONTACT YOUR NEAREST AGRI—KING REPRESENTATIVE AND TAKE ADVANTAGE OF THIS OPPORTUNITY.

Disease

(Continued from Page 1)

regulation. Hogs delegated to slaughter facilities had to be inspected by a veterinarian and be free from cholera along with their counterparts in the herd. The hogs are required to be moved in a sealed truck only and under permit of the federal government. Hogs from the quarantined states must go directly to slaughter without going through secondary facilities such as auctions or markets.

As of the middle of the week, Pennsylvania eased its two-week old embargo on slaughter swine from New Jersey. Hogs directly destined to markets were allowed in the state except from the Glouchester area of New Jersey and the four counties (Norfolk, Bristol, Barnstable and Plymouth) quarantined in Mass. The hogs were allowed across the border only under federal permit and inspections.

With no new cases of the virulent disease confirmed during the week, encouragement was noted by several officials. "We still have a long way to go," stated Hletsch but "we are encouraged that no new developments have come up."

Dr. Homer Forney of the Pa. Bureau of Animal Industries also expressed relief, "we hope this has been confined and that marketing can resume quickly."

The first case of hog cholera was confirmed in Glouchester County in New Jersey on Feb. 26. A total of five herds in that area had confirmed cases with two herds suspected as having been exposed to the disease. In the first few days of March, cases were also confirmed in Massachusetts and in Rhode Island. As many of the slaughter hogs from New Jersey filter through slaughter operations and markets in the Pennsylvania, a state embargo was slapped on even before the cases were diagnosed in New England.

The USDA is now in the process of paying indemnities to the producers of seven herds in New Jersey which were destroyed to prevent the disease from spreading. With 9000 hogs destroyed, indemnity payments have reached into the one million dollar mark already.

Research into the probable cause of the disease continued through this week but no conclusions have yet been drawn.

"There are many ways the disease could have been introduced," Hletsch explained, "research will be continuing for some time - it's still a rough road ahead."

Although the total embargo was eased this week in Pennsylvania, Forney noted that it would still keep entact the restrictions against those affected areas in New England and New Jersey. "We have modified the embargo but are awaiting more word from the infected areas before lifting it totally," the official stated

Encouragement was on the lips of every official this week but although no new cases have developed, research into the possible germination point of the disease is still continuing and will so for many weeks to come.

Hurlburt receives new Sperry post

Joseph C Hurlburt, senior research engineer in Sperry New Holland's Engineering Research Department, has been promoted to product manager for industrial products He succeeds C. Clark Allenbrand, who has been assigned to the sales organization in Arlington, Texas

In his new position, Hurlburt will oversee development of Sperry New Holland's industrial product line which now includes utility loaders, trenchers and centrifugal dryers.

Hurlburt joined the company in 1961 as an engineer trainee. He was promoted to design engineer in 1963 and also was a senior design engineer and a project engineer before being promoted to senior research engineer in early 1975.

A native of Canaan, Connecticut, Hurlburt was graduated from Pennsylvania State University and has a degree in agricultural engineering. He and his wife Susan, reside in Leola and have three children.

Chore-Time
Completely Automatic
Feeding System
Featuring The CHORE-MATIC®

The Chore-Time feeder outsells every other floor feeder on the market for one good reason. It helps broilermen produce more dollars worth of bird from every dollars' worth of feed

How? By keeping birds supplies with fresh feed at all times. Because birds are not confronted with stale, picked-over feed, their appetites are stimulated. They convert feed more efficiently, gain weight faster and more profitably.

Fact is, Chore-Time is loaded with refinements and exclusive benefits you don't find in other feeders. The pulling feed feature and self-aligning pans are just two that save on feed as well as on operating and maintenance costs.

Agricultural future is bright

(Continued from Page 1)

products. She is, in effect, competing for U.S. farm products along with consumers in most other parts of the globe.

Turning his talk to the subject of Penn State's role in food production as it relates to "A New Commitment to Agriculture," the topic of his speech, Beattie noted that the student enrollment in the College of Agriculture has increased from 1287 in 1970 to 3463 in 1975. Enrollments in the associate degree programs have increased by 40 per cent in the past five years; and graduate degree candidates have increased by 16 per cent.

"Sixty-five per cent of the students studying agriculture at the University are from urban areas, and 25 per cent are women," Beattie pointed out. "This gives me the best indication for optimism for the years ahead," he added.

But the number of students studying agriculture and the increased awareness sweeping the nation aren't the only reasons for the Dean's optimism. He also cited booming farm exports as reasons for his bright outlook. Last year agricultural exports were worth nearly $23 billion — by far the largest chunk of all our foreign trade. Farm exports, Beattie said, were responsible for this country's favorable trade balance in spite of high oil prices, etc. Figures show that one out of every four acres of U.S. farm land is used to produce food for abroad and that demand is likely to increase dramatically in years to come. According to 1975 statistics, one dollar in every five earned by U.S. farmers comes from foreign countries.

During the past ten years, the farmer's share of the dollar spent for food has varied from a low of 37 cents and a high of 46 cents. On the other side of the picture, a farmer's investment has increased from an average of $36,000 in 1965 to $150,000 last year.

Pennsylvania agriculture is on the upswing, according to Beatties report. Last year farmers in the Keystone State generated nearly $1.4 billion dollars worth of income, which makes it the state's number one industry. The trend is very likely to continue. In fact, Pennsylvania agriculture is actually growing in the number of farms and total acreage, the Penn Stater informed the group. Within the next couple of years, the number of farms in the state is expected to increase by 2,000 and the total added land brought into production is forecasted at 300,000 acres.

Penn State and the Extension Service play important rolls in the continued development and expansion of agriculture, Beattie said. Both work together for the delivery of education and services based on research. While the farmer is still the main beneficiary of agricultural research at the University, work at University Park and elsewhere has taken on a much broader field. The total enviroment is now being considered. In cooperation with the Extension Service, the University is disseminating information which is designed to make the best use of a community's resources, the Dean explained.

Beattie singled out some impressive Lebanon County agricultural statistics to nail down his reasons for an optimistic outlook.

"There are 1130 farms in the County," the head of Penn State's College of Agriculture began. "Last year you produced $33 million owrth of food - with the dairy industry accounting for $13.6 million of that and the beef operations taking credit for $8.7 million. In addition, Lebanon County agriculture provided 1,800 ag-related jobs which in turn generated $12 million worth of income," he concluded.

The 2½-hour program, held here at the Fire Hall, continued with remarks made by Aletta Schadler, home economist and County Extension Director in the absence of Newton Bair who is currently on sabbatical leave in the Bahamas. In reviewing the work and acceptance of the Extension Office, Mrs. Schadler states: "We are very fortunate to have the whole-hearted support of the county commissioners."

A report of the 1975 Extension Programs was made available to everyone who attended, with additional remarks coming from Marion Deppen, assistant director of the Capitol Region; Cheryl Reitz, home economist; Denis Hoke, county agent; and Patricia Krall, 4-H supervisor. The Extension Office's secretary, Marilyn Szerba, was given a special plaque in recognition of 10 years of service to the organization.

New Holland promotes three

NEW HOLLAND — Three Sperry New Holland executives have been given new responsibilities in the area of manufacturing.

J. Nelson Harris, Sperry New Holland vice president for manufacturing, North America, has been named to the new position of vice president for manufacturing worldwide. His responsibilities will include all manufacturing operations in the firm's European, North American and Latin America - Far East divisions.

Theodore C. Jackson, presently general manager of Sperry New Holland's Lexington, Nebraska plant, has been promoted to replace Harris as vice president for manufacturing of the North American Division, according to H. G. McCarty, vice president and general manager, North American Division.

Succeeding Jackson as general manager of the Lexington plant will be William T. Kennedy III, presently manufacturing administration director at the company's New Holland headquarters. The changes are effective March 1, 1976.

Theodore Jackson

Nelson Harris

A native of Juniata County, Pennsylvania, Harris and his wife Dolores reside in Akron, Pennsylvania, and have four children.

A native of Huntingdon, Pennsylvania, Jackson received a degree in industrial engineering from Pennsylvania State University. He and his wife Ruth Anne have two children.

A native of Belleville, Kennedy graduated from Pennsylvania State University with a degree in engineering mechanics. He and his wife Sharon have two children.

William Kennedy

Meet the candidates programs scheduled

A series of three meetings to introduce candidates to the farming people will be held in the coming weeks by the Lancaster County Farmer's Association.

The first meeting will be held Monday, March 15 at the Community Auditorium in Park City at 7:30 p.m. Candidates from legislative districts 196 and 198 will be present.

A second meeting will be held on March 19 in the Farm and Home Center at 7:30 p.m. Candidates from Congressional District 16 and the State Senatorial nominess will be present.

On April 2 a meeting will be held at the Ephrata Junior High School at 7:30 p.m. for candidates in legislative districts 13, 28, 48, 97, 99 and 102.

Candidates will have the opportunity to speak for five minutes each and participate in a question and answer period.

HARMONY IN THE FEED LOT

Nitrogen stabilizer developed

(Continued from Page 1

with anhydrous ammonia or urea solution fertilizers at rates equivalent to one-half to one quart per acre, N-Serve tends to increase yields, or maintain yields in the face of decreased use of these fertilizers. Disease resistance is also enhanced.

For example, of 126 tests for which data had been tabulated by December 1, 1975, a total of 104, or 83 percent, showed yield increases, according to R. L. Tennant, Dow's Manager of Plant Nutrition. N-Serve failed to increase yields in only 22 of the tests, and these were instances where conditions for nitrogen losses did not occur.

The tests were run on the four crops for which the stabilizer is registered — corn, wheat, grain sorghum and cotton — at more than 50 locations across the country. In addition, many other growers not formally involved in the tests reported similar successes with both fall and spring application of N-Serve.

Ecological benefits also occur from the use of N-Serve because it minimizes the volatilization and leaching loss of nitrogen incorporated in the soil prior to planting. It achieves this by controlling many of the Nitrosomonas bacteria which normally are responsible for the conversion of ammoniacal nitrogen to nitrite nitrogen. Therefore, the nitrogen remains in the ammoniacal form attached to soil particles, instead of converting to a form of nitrogen which can be carried off by rain or irrigation waters.

In fact, soil scientists estimate that only half of the nitrogen farmers apply is utilized by their crops. The rest is lost through natural biological conversion, denitrification, leaching, and volatilization processes.

Research indicates that N-Serve can cut this loss from 50 to only 30 percent and sometimes much less, Tennant says. This explains the success of fall fertilization with nitrogen plus N-Serve in the corn belt. There, historically, nitrogen application has been held off until the soil temperature drops to 50 degrees F to minimize nitrogen leaching. By then, too often there has not been enough time left to do the job.

However, with the addition of N-Serve, nitrogen can be applied sooner, and with N-Serve he can apply nitrogen at the spring rate.

According to research at Purdue University, N-Serve — or nitrapyrin in chemistry language — is expected to give best results when applied to light soils which are subject to leaching losses, or to heavy, wet soils where denitrification is likely. This is especially true in years that are excessively wet and-or cold and where nitrogen is early-fall applied.

On the other hand, Purdue scientists point out that there will be little or no yield benefit in those soils or years with little N loss caused by leaching or denitrification. No significant response would be expected where excessive rates of nitrogen were applied to compensate for leaching or denitrification losses. No response would be expected if the nitrogen fertilizer used did not contain significant amounts of the ammonium form.

Dow notes that N-Serve would benefit dealers and custom applicators from fall application because it enables them to level their peak work loads. And manufacturers of nitrogen benefit because fall fertilization comes at a time when they would otherwise have to shut down production due to lack of storage capacity.

Protein and Lysine content of grains is also increased by the use of N-Serve, says Tennant. Current research shows that — contrary to earlier belief — seedling crop plants better utilize nitrogen in the ammoniacal form than as nitrates. Perhaps even more significant, holding N in the ammoniacal form for the longer period mitigates certain crop diseases, particularly Pythium and Diplodia stalk root rot of corn, footrot, or take-all and Leopard-Spot in wheat, and Verticillium wilt and Texas root rot of cotton.

This disease reduction results in part simply from growing a healthier plant free of nitrogen stress, Tennant explains. But in the case of Pythium and Diplodia stalk rot of corn, there is a more direct relationship: both these diseases actually feed on nitrate nitrogen. Overall, though, most corn growers have reported healthier, stronger stalks growing on acreage treated with N-Serve.

While researchers dig deeper into these relationships, Dow has ample evidence indicating N-Serve will earn its way in yield increases anytime the amount of N applied is less than that which can be utilized by the crop being fed.

"In some cases," Tennant says, "a farmer can use 20 percent less fertilizer without appreciable reduction in yield if he adds N-Serve. But, unless we come into a period of critical shortage of N, we'd rather see him add N-Serve to the same amount of nitrogen he's using now and increase his plant population or reduce row spacing to make better use of the 'extra kick' N-Serve gives him."

In any event, he adds, N-Serve is good medicine when nitrogen is a limiting factor, either because application is at a rate less than optimum, or because of nitrogen losses that have heretofore been beyond the farmer's control. Best response usually can be expected in light soils subject to leaching or in heavy water-logged soils.

However, throughout central and northern Illinois, for example, corn growing conditions were just about optimum in 1975 and the need for N-Serve might have been thought minimal. Yet the additive still increased yields substantially. Typically, Donald Hubbard, who farms 292 acres southwest of Lincoln, Illinois, fall-fertilized in 1974 about 18 acres with 160 lb.-acre of N plus N-Serve and another 16 acres with 160 lb.-acre of N alone. The plot treated with N-Serve yielded 197.11 bu.-acre adjusted to 15½ percent moisture and the plot without N-Serve produced 190.45 bu.-acre. This yield difference of 6.66 bushels netted Hubbard an extra $13.15-acre.

"If you like corn, don't skimp on the nitrogen," adds Hubbard who has been farming for 42 years. "And with N-Serve, the nitrogen will be there when you need it. I'm really sold on it for fall application."

At Land-O-Lakes' Answer Farm near Fort Dodge, Iowa, researchers added N-Serve to 100 lb.-acre of N and harvested 127.9 bu.-acre of dryland corn — nine bushels more than was produced on similar land receiving the same amount of N without N-Serve. At $2.70 a bushel, the "profit" after cost of N-Serve would have been more than $20-acre. Surprisingly enough, a field treated with 140 lb.-acre of N produced less — 113.3 bu.-acre. When N-Serve was added at this rate, the yield went up to 120.1 bu.-acre — 6.8 bu.-acre more than without N-Serve.

Says Tom Nauman, fertilizer specialist for Land-O-Lakes, a large cooperative serving some 50,000 growers in six corn belt states. "We feel real confident we can duplicate these gains next year — particularly if we have a wet spring again. This speeds nitrification and accelerates fertilizer losses. If you knew you were going to have ideal conditions, then maybe you wouldn't want to use N-Serve. But the way we look at it, it's good low-cost insurance."

Dr. Cleve A. I. Goring, head of Dow Chemical U.S.A.'s

Red Rose Beef Club elects new officers

By MELISSA PIPER

LANCASTER — The basement meeting room in the Farm and Home Center here was overflowing with 4-Hers, would-be 4-Hers and their parents during a recent re-organizational meeting of the Red Rose Baby Beef and Lamb Club.

Perhaps it was the influence of Jim Greider's spectacular win at the State Farm Show or the encouragement of young Bonnie Sue Frey's first year success, but whatever the case, many youths in the county attended the meeting as a prelude to another 4-H season.

A panel discussion was held prior to the elections and several 4-Hers who had won outstanding awards during the show season addressed suggestions to the younger people in the audience. Humerous anecdotes of dealing with the beef and sheep projects flowed across the mike, often to the amusement of the parents who had shared in the incidents.

Jim Greider told of walking his steer at 11 p.m. along Rt. 30 and having truck drivers wave in recognition. Other members told of halter breaking stubborn steers and one sheep member related having to make her animal jump over hurdles to tone his muscles.

Even the parents and leaders had the opportunity to address the audience on the past year's activities. A serious note from one leader, Bud Diehm, reminded parents and members alike of the serious nature of the community zoning laws which had threatened several youths near Refton. Diehm and several members of the local zoning committee stressed the importance of becoming involved in government planning so as to protect agriculture in the small towns.

Kevin Rohrer, Manheim R7, was elected as the president of the Red Rose Club for the bicentennial year. Linda Good, Lititz R2, was named vice-president. Other officers elected included: Susan Herr, secretary; Bernie Gish - ass't. secretary; Tim Good - treasurer and Robert Hess - ass't. treasurer; Cathy Brubaker and Marcia Rohrer - game leaders; Linda High and Anthony Eberly - song leaders and Betty Reiff and Greg Greider as news reporters. Ken Brubaker was named as teen leader for the group.

Officers for the Red Rose Baby Beef and Lamb Club were recently elected at their reorganizational meeting. Elected were (counterclockwise) Linda Good - vice president; Kevin Rohrer - president; Tim Good - treasurer; Bernie Gish - ass't. secretary; Robert Hess - ass't. treasurer and Sue Herr - secretary.

Fire destroys

(Continued from Page 1)

when he fell through the weakened barn floor.

The barn owned by Rhoda Risser way totally destroyed with the value estimated at about $20,000. A corn picker, planter and five tons of seed valued at about $3000 was also lost.

Mastersonville Fire Company assisted by Manheim and Mount Joy firemen responded to a blaze at the Jay Faus farm Manheim Rd; along the same road on Monday evening at 5 p.m.

According to Mastersonville Fire Chief Chester Hoffer, the fire is believed to have been set by a spark from a tractor in the barn.

Larry Faus was driving a tractor out of the barn to haul fertilizer when a spark from the engine supposedly caught the structure on fire.

Robert Kulp, 24, a volunteer fireman suffered a broken jaw while fighting the blaze when he was hit with a large pipe. Other firemen had tried to throw the pipe out of the structure when it bounced off a beam and caught Kulp on the side of his head. Kulp was taken to Lancaster General for treatment.

The Rapho Township structure was burned to the first floor with an estimated $40,000 loss. Contents in the barn which were also lost were estimated to value about $8000.

Although the proximity of the barn fires caused many to believe that arson might be suspected, fire officials still contend that each blaze had a specific origin related to natural causes. Investigations are still continuing.

PROGRESSIVE FARMERS WANT PROFESSIONAL CONSULTATION

1. Is pH a false indicator of calcium levels in your soils?
2. Is sulphur holding back the yield, protein content and digestibility of your crops?
3. Is excessive magnesium what makes your land so wet and late?

If your present soil tests don't answer these questions, you will profit by our technical help. SOIL TESTS ARE DIFFERENT! Our complete soil analysis will help you balance soil fertility, which means more efficient cropping and feeding - less bought feed and fertilizer - more yield and profit.

WE SELL NO PRODUCTS — ONLY RECOMMENDATIONS

There is a reason why progressive farmers with sharp pencils hire us year after year for soil analyses and recommendations. We save them dollars. **Balance** makes crops to be proud of. Winter is the time to talk it over with:

Holstein Club slates tour

The Chester County Holstein Club will tour farms in the Chestertown, Maryland area on Thursday, March 18.

The tour bus will leave the Donald Hostetter Farm at Parkesburg at 8:15 a.m. with a second pick-up scheduled for 8:45 a.m. at the Grace Baptist Church at Russellville.

Stops will be made at the Ed Fry farm, Ashton Garrett farm, Jack King's acreage and the Remington Farms.

All guests are asked to bring boots and a packed lunch. The evening meal will be at one's own expense. Bus fare is $5.00 and bus reservations should be made by March 16 by calling Harold Barg at 215-593-6577 or by phoning 215-857-9648 or 215-932-3975.

Weaver's sponsors waste meeting

Principle speakers at the waste recycling meeting held this week in Lancaster were (from left) Samuel Hay, Richard Weaver, Lester Burdette and A. G. Meiering.

The meeting was sponsored by Weaver's Star Silo. Speeches will be featured in next week's issue.

Dairy Day reviewed management

(Continued from Page 1

improved remarkably. But that wasn't the point of the film. Farmer cooperatives are being challenged in the courts; the film attempted to give some background on the hows and whys of cooperatives while stressing the advantages and importance of belonging to such an organization.

QUALITY MILK

Sid Barnard, associate professor of food science at Penn State, was the first of five to speak. His review on milk sanitation, entitled "Procedures for Producing Quality Milk," included tips and reminders known to most dairymen, but it "didn't hurt to hear them again," commented Fred Crider, who moderated the event.

"Generally, bacteria problems (high counts) are not associated with cow problems ... they result from a lack of proper sanitation and-or improper cooling," Barnard informed the dairymen. He noted that it takes two types of cleansers to have a complete sanitation program: an alkaline cleaner to remove fat and protein deposits; and an acid cleaner to eliminate mineral formations. "There is no one product for all purposes," the professor cautioned.

The three critical factors to keep in mind for units which are cleaned in place are: temperature, velocity, time, and strength.

MANURE MANAGEMENT

"There is no such thing as waste disposal," Gerald Bodman remarked while pointing to brown areas on a slide which was being projected onto the screen. "It's management of a resource," he emphasized.

Speaking about manure and how it should be handled, Bodman, an extension agricultural engineer at PSU, expressed a firm belief that manure was indeed a resource. He advised farmers to treat it as such — not only because of its values — but because laws are being passed which will set guidelines on how it can be handled. He entitled his talk "Manure Management — The Problem, The Opportunity, The Alternatives."

As far as Bodman is concerned, "if they (suburbanites) can see it (manure), they think they can smell it. It may have been intended as a hint that all phases of proposed regulations aren't in agreement with him, and that the issues can be carried too far, but that did not lessen his conviction that manure should be handled in such a way so that its values will not be lost.

The Extension Service, which aids farmers in coming up with plans for manure handling, is now offering plans which comply with standards recommended for 1983, Bodman said. He described criteria which would determine which farms would be required to apply for "discharge permits," and cautiously added that any size farm could be singled out if and when complaints are filed against it by a neighbor. Applications for "waste disposal" permits are due by March 10 of next year, he advised.

According to Bodman, there is no "environmentally approved" manure handling system on the market, although two farms in the state have approved methods. One of them is the Young Brothers operation near Peach Bottom.

SOMATIC CELLS

Sid Barnard returned to the podium after lunch to talk about "Somatic Cells and Growth Inhibitors." The main thrust of the talk centered around the fact that on any given day, five to 10 per cent of Pennsylvania's dairy herds submit herd milk samples which exceed 1.5 million on the somatic cell count. The estimated loss of production is calculated at 10 to 20 per cent.

Penn State is currently working with a machine imported from Denmark which may make it possible in the near future to test DHIA samples for somatic cells, thereby giving dairymen "early warning" if certain cows show signs of potential problems. Barnard guesses the cost of such a program might be 10 cents per sample.

Another concern at Penn State and dairies all across the country are antibiotics. "It happens too frequently that we find them in milk," the professor warned. He noted that approximately two dairy farms per day are caught. "There is absolutely no use for milk which contains antibiotics in it," he stated emphatically. "The tolerance under FDA regulations is zero."

Barnard emphasized that dairymen hold all milk for 72 hours from time of last treatment from cows which have been treated with antibiotics.

DAIRYING'S FUTURE

"Food For People and the Future of Dairying" was the title of B. R. Baumgardt's presentation. Introduced as a dairyman at heart, Baumgardt recently succeeded Dr. D. V. Josephson as head of the newly created Department of Dairy and Animal Science at Penn State. He had previously been primarily involved with the animal industry courses at the University but took over Josephson's job as well when he retired last summer and departmental changes followed shortly thereafter.

To make a long story short, Baumgardt is optimistic about the future of the dairy business, and to quote him: "I sincerely and honestly believe that animal agriculture will exist for a long time — although feeding programs, etc., may change, the dairy cow will persist." He bases his optimism on the world's need for nutrition and health and that animals have a definite place in this program. Furthermore, animals are a necessary component of the environment and economy, regardless of what opponents of animal agriculture say.

FORAGE FEEDING

Dick Adams concluded the program with his speech on "Effective Forage Feeding." He noted that the most profitable forage feeding programs require the use of corn silage and hay and that both must be made carefully and properly. Alfalfa is the top source of protein per acre, and corn silage ranks first as an energy source, Adams pointed out.

All things considered, Adams believes that it is usually more practical to keep as many cows as what the land will raise feed for. But he adds that there are exceptions to the statement, especially when labor is considered.

Speaking on forage quality, Adams compared hay, haylage, and wilted silage for dry matter losses and came up with the following respective figures: 24.2, 19.7 and 16.6 per cent. Noting the lower loss level with wilted silage, the dairy specialist cautions that the dairyman can't necessarily except to overcome his forage quality problems by going the silage route.

Heat damage in ensiled feeds is a "management problem" and there isn't a product on the market anywhere which will minimize such losses. But there are some tips which will improve the farmer's chances of having little or no heat damage. They are: 1. don't overwilt, 2. fill silo fast, 3. chop fine, and 4. go for proper moisture.

Adams finished his talk by mentioning the three most important "devices" for coming up with good quality forage, which are: The moisture tester, scales, and a good manager.

Like a good neighbor, State Farm is there.

Nitrogen

(Continued from Page 15)

plant research and development, said that the nitrogen inhibitor compound (N-Serve) will have uses around the world.

In reviewing the development history of N-Serve, Goring said that the initial research into its actions gave rise to a group of Dow pyridine agricultural chemicals that are being used to control weeds, insects, fungi and nematodes.

As a example of the energy savings possibilities offered by the use of N-Serve, Goring said that the largest energy input required in corn production is that which produces nitrogen fertilizers. "If as little as five per cent of the nitrogen applied to corn could be saved by improving utilization of applied nitrogen, almost 10 billion cubic feet of natural gas could be saved," he stated.

Zero Concord
TWIN-VACUUM PIPELINE
MILKING SYSTEM
—WITH COW MONITOR

The ZERO CONCORD is a combination of a revolutionary pipeline milking machine and the ZERO Completely-Automated Vacuum Bulk Milk Cooler It's the only system that provides stable milking vacuum at the teat end — in parlor or stanchion barn — with a low or high, short or long pipeline — and without injecting air into the milker units to move the milk Only with stable vacuum and no air injection can you hope to reduce leucocyte counts up to 65% — increase milk production as much as 20% — and prevent off-flavor milk

A patented scientific principle TWIN-VACUUM whereby one vacuum milks the cows — and a different vacuum moves the milk through a separate pipeline into the bulk tank—is what makes safe, stable vacuum possible Furthermore, ZERO's patented SPATTER-SPRAY Automatic Washer — and a new improved, more-compact, high-capacity, transparent milker unit — provide built in, "push-button", visible self cleaning and sanitizing of the entire system — without disassembling And there are many other superior features

GO Zero Concord — FROM TEAT TO TANK!

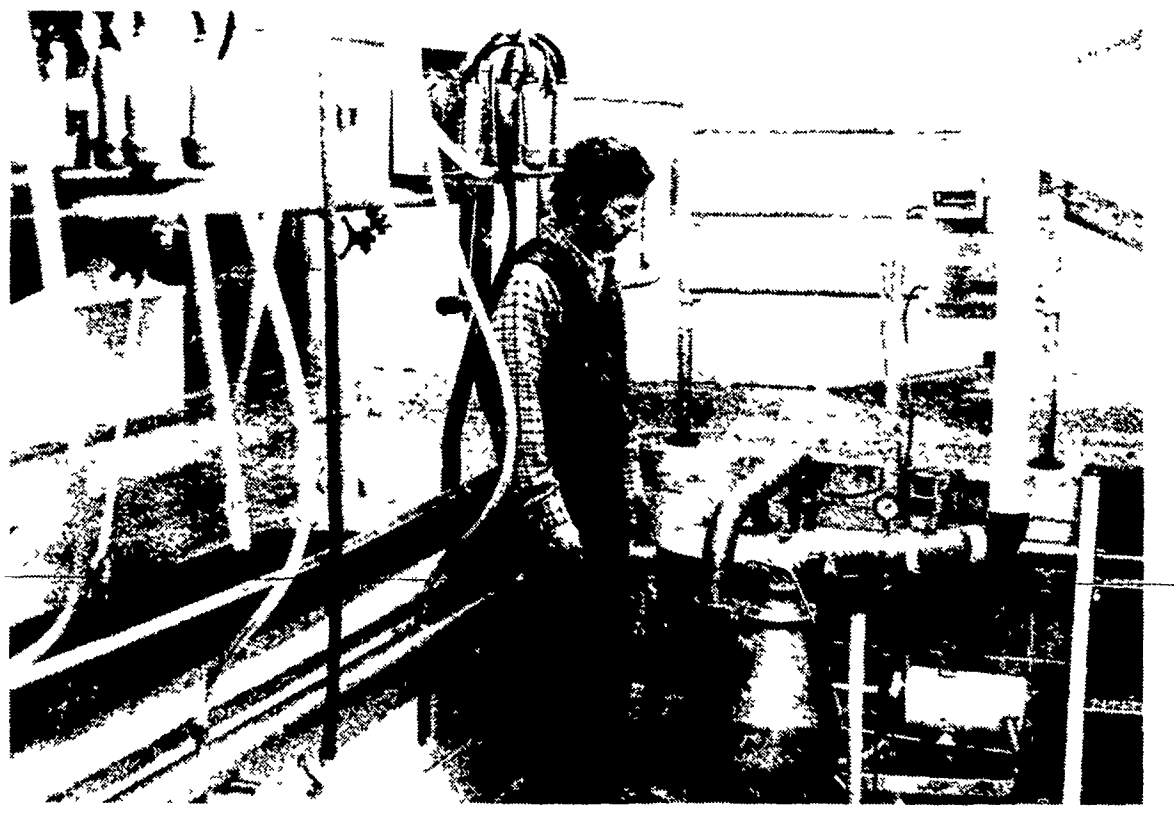
AGWAY

ANOTHER SATISFIED USER OF
STA-RITE Milking Equipment



Guy Hitz of Dol-Mar Dairies, R1 Annville, has been a Sta-Rite owner since October of 1974.
Mr. Hitz is pictured in double-four full comfort Sta-Rite milking parlor. This parlor features the three inch stainless steel low line milking and receiving system and a electrically controlled feeding system.
Mr. Hitz stated he has been satisfied with the Sta-Rite equipment and Agway service.

Contact your local Farm Systems salesman for expert help in designing a milking system to fit your operation.

Brace yourself against rootworms!

With Dyfonate® insecticide. The insecticide that's so dependable, it's guaranteed to perform. Dyfonate controls rootworms that destroy feeder and brace roots.

No matter how early you plant, economical Dyfonate works for sure. No matter how late rootworms hatch, Dyfonate gets the job done. Dyfonate 20-G—the most concentrated granular for rootworms; ideal to save time and labor with fewer refills. Also available as Dyfonate 10-G granular and liquid Dyfonate 4-E.

Dyfonate. The answer to Lancaster County corn growers' problems with symphylans, the tiny white soil pests that are continuing to expand their threat to corn. Dyfonate gives solid protection for corn roots against corn rootworms.

Remember, performance of Dyfonate is guaranteed in the continental United States, when used as the label directs, or Stauffer will replace it. Verify your purchase, leave a check strip and notify Stauffer promptly.

Rely on Dyfonate for control of corn rootworms and symphylans...at low cost! See your Stauffer supplier now. Always follow label directions carefully. Stauffer Chemical Company, Agricultural Chemical Division, Westport, Connecticut 06880.

Dyfonate® from Stauffer.

trains that are warranted a full 24 months—twice as long as many others. You sit in the *Acousta* cab proven quietest in the industry. And operate exclusive load sensitive hydraulics that sense both volume and pressure needs. Result? Maximum power for pulling big implements, no excess heat or wasted power.

Discover the beauty behind the brawn in these 2 tractors from the Rising Power Family. Come test drive both. Then decide.

The choice is yours. Our Allis Chalmers 7040 puts 135 turbocharged horses at your fingertips. Our 7060 delivers 160 hp. Either way you go, you get exclusive 20 speed shift on-the-go *Power Director* transmission or optional 12-speed *PowerShift*. With power

Manufacturer's maximum observed PTO horsepower at rated engine speed. *Power Director* is an Allis Chalmers trademark.

USED HARVESTORE 20' x 70'

LIKE NEW

This silo & unloader is only 1 year old It will cost approximately $4,000 to take down, move & set back up on your farm We want $20,000 for the silo & Goliath unloader. To buy one like it today would cost over $30,000. That leaves a savings of over $6,000, enough to buy the equipment necessary to fill the silo. We are also selling a Super 717 NH chopper with corn head & pick-up head $2850 and a Gehl chuck wagon with extra long body & double tandem running gear $2850 All like new. If you are putting up a Harvestore this year, don't pass up this opportunity.

WATER WATCHER

PUT A RITCHIE FOUNTAIN IN CHARGE OF YOUR HERD'S WATER.

Ritchie fountains keep plenty of water in front of your cows, day in, day out . . . automatically.

Big-throat, rust-free valves dish it out fast, and Ritchie's reliable heating system keeps water ice-free on the coldest winter days.

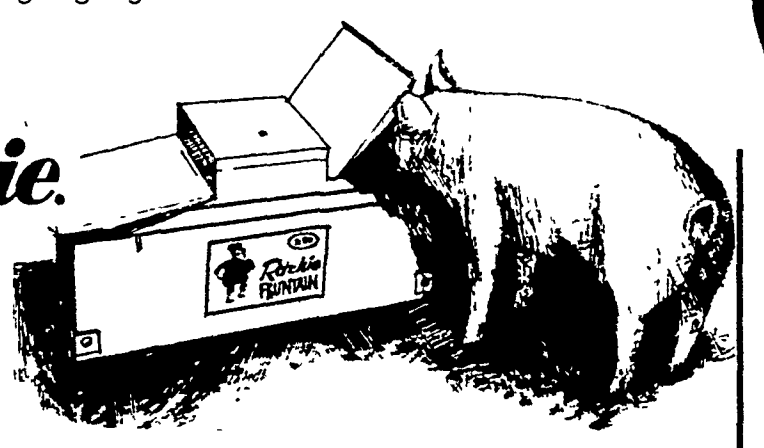
With the CD-50® epoxy finish over heavy-gauge galvanized steel, Ritchie Fountains will stand up to years of abuse from livestock and weather.

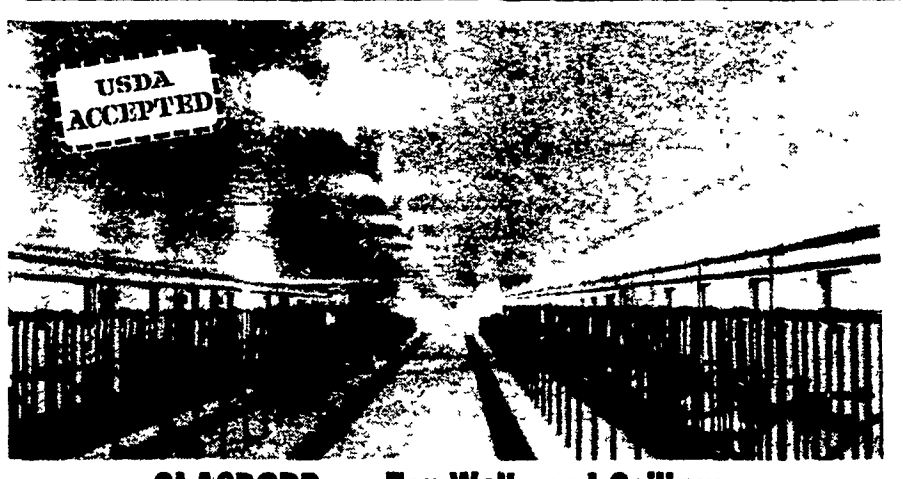
Why take chances on an old watering system? There's a Ritchie fountain that's right for your operation. See your local dealer or contact . . .

Relax...

Ritchie.

waters 'em right.

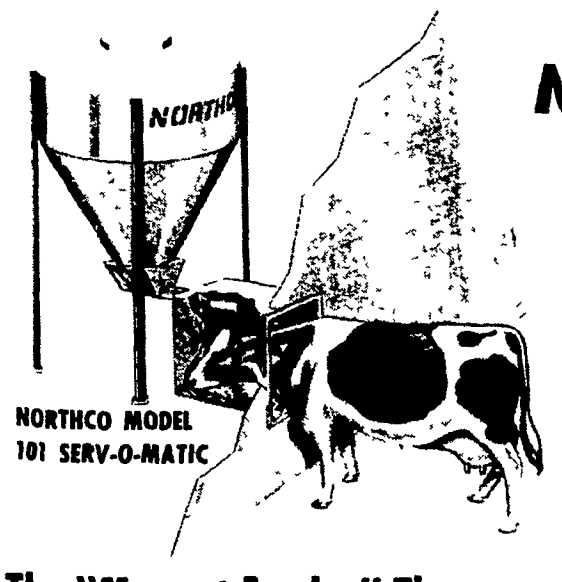




GLASBORD — For Walls and Ceilings

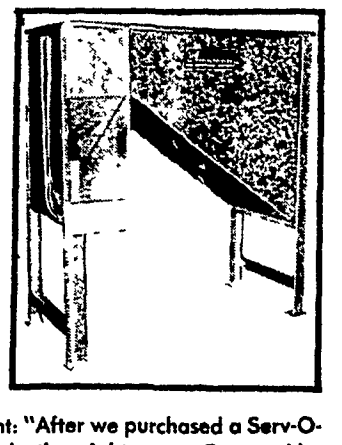
Glasbord is a semi-rigid, fiber glass reinforced plastic panel available n 4' x 8' sheets and 4' x 45' rolls. It is ideal for use in milking parlors, dairy barns or any other farm building where sanitation and ease of cleaning are important.

• Mildew-proof, rot-proof • easy to clean • unaffected by animal waste • will not harbor bacteria •



NORTHCO MODEL 101 SERV-O-MATIC

NORTHCO Serv-O-Matic Dairy Feeder



The "Magnet Feeder" That Selectively Feeds Concentrate o. High Moisture Corn

Mrs. Walter Grove, Franklin Co., had the following comment: "After we purchased a Serv-O-Matic Feeder for our farm we could tell it on our milk production right away. On cow No. 100, we removed the magent and her production dropped immediately about 15 lbs. We plan on replacing the magent as soon as possible. WE THINK THIS SERV-O-MATIC FEEDER IS GREAT."

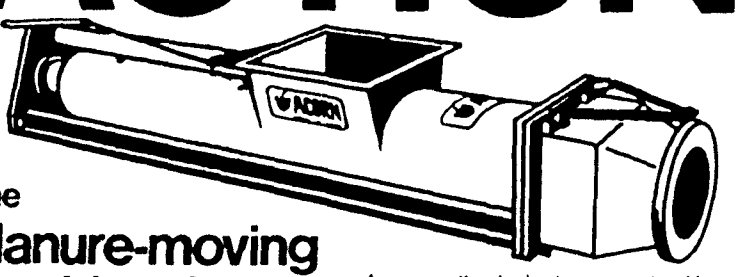
ACTION



The
Manure-moving machine that never balks at bulk.

When you make the move to simplify manure management — combining underground pumping with above ground storage — better move up to the equipment that really hammers it home

Acorn rams the chunkiest manure and bedding — wet or dry — through PVC underground pipe with a hydraulic force that pumps bulk up and into the bottom of the remote storage pile without so much as a cough

No other company comes close to the Acorn pump's sheer power and ability And no one offers a no-nonsense warranty like Acorn full one year protection against defects in materials and workmanship The same warranty holds true for Acorn's complete line of farm and materials handling equipment brute strength barn cleaners feeders silo unloaders stalls and stanchions Get in on the no-nonsense action Get an Acorn

MARTIN LAGOON PUMPS

Business Opportunities

DEALERSHIP OPPORTUNITY as big as agriculture and YOU

The American farmer has achieved a stature in the world economy which secures his prosperity better than ever

As a Case dealer supplying his production needs, you share in this unlimited opportunity Franchises are available in New York and Pennsylvania

As a Case tractor and implement dealer you are the power specialist, providing the essential power for greater productivity at a profit Power specialization lets you devote all of your time and resources — sales, parts, and service — to one area Tractors

You cover the field in 12 sizes of power from 43 to 221 H P with the Case-David Brown line

You may also qualify for the light construction equipment franchise, which includes our 580B, the number one backhoe-loader Vibromax compaction and lawn and garden franchises may also be available

Case will help guide you or your managers to sound business practices, aggressive marketing and strong advertising, and promotional support Our Case Credit Corporation will support you with both wholesale and retail financing

GOOD NEWS despite BAD NEWS

The bad news is the prophecied famine, pestilences, and sorrow, serious drought in the west already. The good news is that the situation can be eased by live, spongy soil. Earthworms, bacteria, micro-organisms, trace minerals are very precious. Aiding nature, you get a lot of free help and plant food, spongy soil and subsoil that holds moisture, and long roots to go down and get it. Working against mature you need and pay for much fertilizer, plus insecticides, fungicides, and drugs for livestock.

Three products for sale to use with small amount of your fertilizer. $2 to $8 an acre will do much and save many other dollars. One promotes life, earthworms, bacteria, micro-organisms, good decay. One supplies the minerals and trace elements. One releases nutrients that are in the ground. It is also a wetting agent to mix in sprays, replacing half the chemical, is good for the soil instead of detrimental, and much cheaper than competitive products.

Write for free literature. Distributors wanted in other Counties. Eli L. Stoltzfus, 69 Strasburg Pike, Lancaster, Pa. 17602.

LEARN TO BREED YOUR OWN COWS

Sire Power and NEBA are conducting a

"DO-IT-YOURSELF"

Direct Herd A.I.

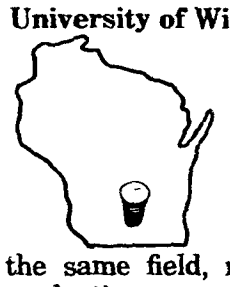
Harvestore processed haylage

Fact vs. Fiction

Alfalfa. The richest in protein of all forage crops. But when it's baled or stacked, a lot of those valuable nutrients are lost forever. Lost to shattering. To weather damage. To feed bunk waste.

But with Harvestore processed alfalfa haylage, you're able to take full advantage of the protein-rich alfalfa plant. For profitable feeding facts, read these university research reports. For enjoyable fiction, visit your public library.

University of Wisconsin



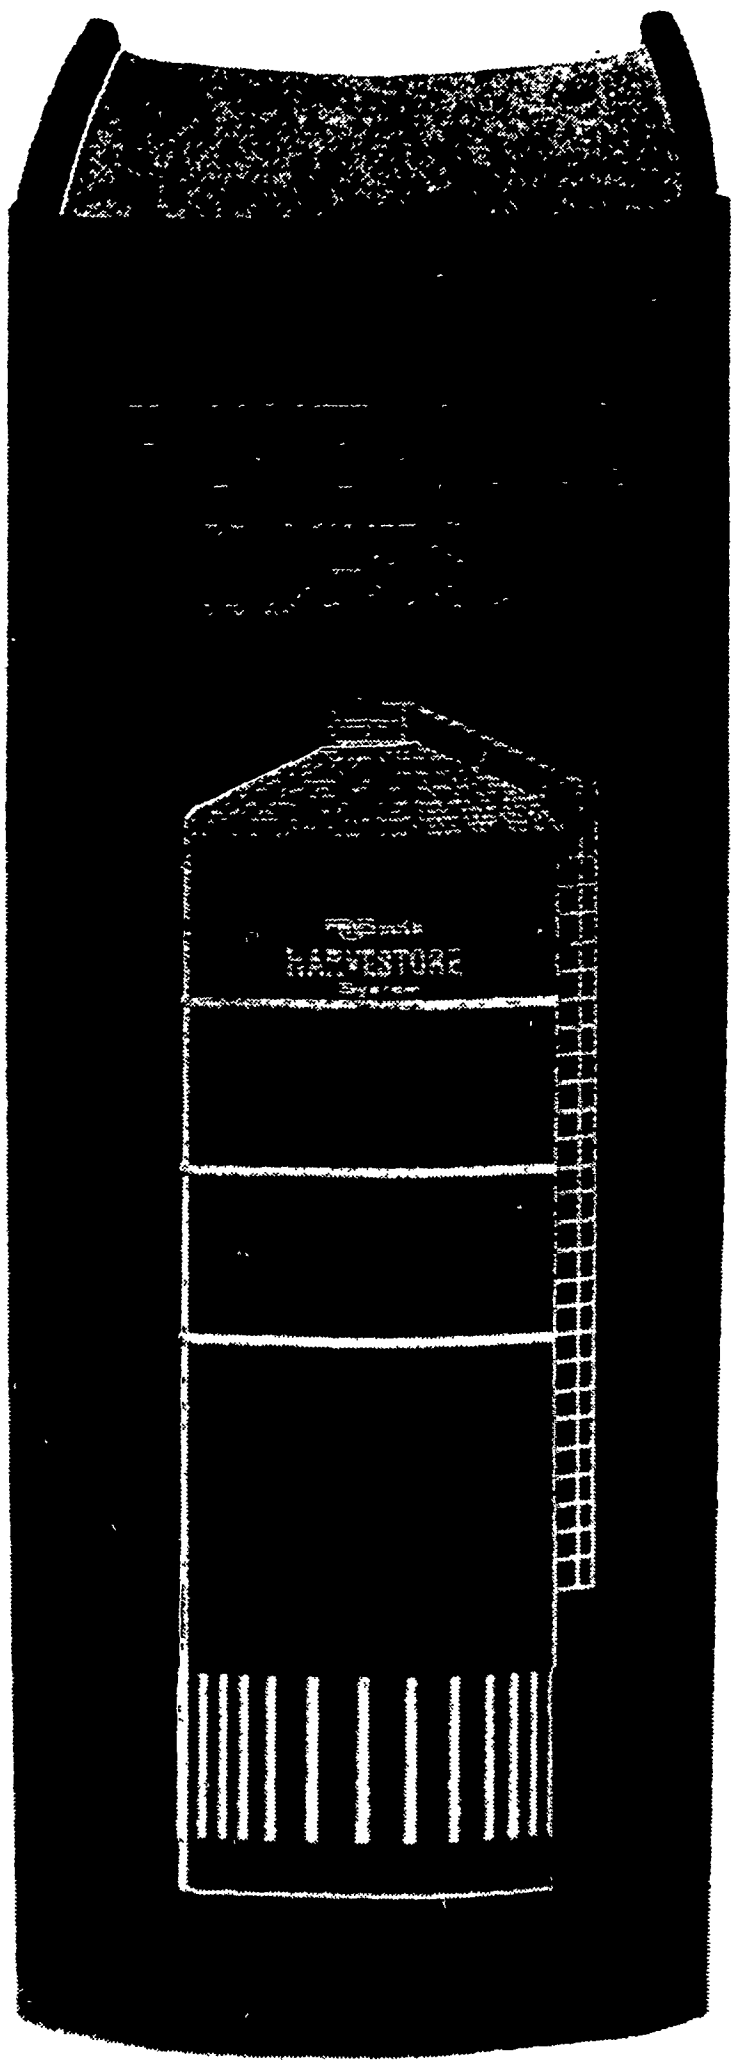
"In a three year trial comparing roughage rations of hay and grass silage stored in a Harvestore with Harvestored processed haylage from the same field, results showed milk production averaged 45.6 lbs. of fat corrected milk daily on the haylage ration compared to 42.2 lbs. of fat corrected milk daily on the grass silage ration. **This difference of 3.4 lbs. was highly significant."** (D-86)

University of Illinois

"In two tests comparing dry hay and corn silage to Harvestore processed haylage, the results showed: "Steers fed haylage, high moisture corn and supplement gained 6.4% faster than steers receiving hay as their source of roughage. The haylage-fed cattle gained significantly faster than the silage-fed cattle. Haylage produced the cheaper gains." (B-37)

Ohio Agriculture Research & Development Center

"Under research conditions at the Ohio Experiment Station, tests show that one pound of alfalfa haylage replaced one pound of ground ear corn on a dry matter basis when fed between 50% and 60% of the total ration to dairy cattle. Cows preferred a high dry matter silage (haylage) over silage made by direct chopping. They ate more forage and responded with **greater milk production."** (D-19)



South Dakota State University

"Steers fed the forage with added water and stored in an airtight silo gained 7.1% faster than those fed chopped hay and 11.1% faster than those fed baled hay. **The improvement in feed efficiency over baled and chopped hay amounted to 13.5 and 11.5%."** (B-89)

The information contained herein is general in nature and is drawn from sources deemed to be reliable. Any application to a particular farming operation requires the advice of qualified experts and is subject to limitations of good management, weather and other conditions present at the individual location.

Decorating the finished product is really a labor of love. Here Mrs. Strauss adds icing, colored - sugars or coconut or nuts. The end product is delicious.

Mrs. Strauss looks over Richert's recipe notebook and his father's book of accounts.

Homestead Notes

Historic recipes preserved by Ephrata farm wife

By SALLY BAIR
Farm Feature Writer

Handing down recipes from generation to generation is nothing new. Many treasured recipes have been saved in this way. A mother teaches her daughter, who in turn teaches her daughter, and a tradition is kept intact.

The case of Mrs. Robert D. Strauss's favorite sugar "cake" recipe is a little different however. She learned to make it from her great-uncle, Charles Rickert of Manheim, and so these cookies are particularly special.

But how did this uncle become a baker? The Rickert family resided in Lititz during the middle 1800's, but when Charles Rickert's mother died and his father remarried, he left home. To support himself he went to work for a German baker in Lititz, George Wilhelm. Apparently Rickert chose this profession mostly as a means of support, and not because he was especially interested in being a baker.

Nevertheless, he learned the trade well, and, interestingly, kept a small leather notebook with a few recipes for "cakes," which all kinds of cookies were then called.

When he married in 1894, Rickert moved to Manheim, Mrs. Strauss relates. It was then that he began his daily walk to Lititz from Manheim, "following the railroad tracks," Mrs. Strauss said. Eventually, this became rather a burden and he went to work for his brother-in-law, Elam Showers, who was a baker in Manheim around 1910-1912.

Mrs. Strauss explained that her great uncle was "like a grandfather to me," since she lived in his home with her mother. "He never wanted to be called grandfather, just Uncle Charlie." She said she learned to bake from him, "because I was always around him." At the time she helped him with his baking, "he didn't work as a baker; he was a laborer."

Mrs. Strauss recalls that as a child, "I would stand beside the kitchen cabinet and watch him roll out the cookies, and at the end he'd let me work with some of the dough."

She said, "He never measured when he was baking." So when she married, she asked him if she could measure his work and keep a recipe for herself. And that's how she acquired the delicious sugar "cake" recipe which is given later.

She recalled that Rickert enjoyed baking "cakes and things" until he was in his seventies. "We used to take bicylce rides and take walks to White Oaks - we'd follow the railroad tracks." He died in 1958 when he was 88 years old. He and his wife had had just one son who died in infancy, so the named has died out Mrs. Strauss said.

She said Rickert would bake just for himself or for the church. If the church was having a function, he would bake "cakes" in quantities and donate them.

As a little girl, Mrs. Strauss said it would frequently be her job to get "bottled raw milk" from the store for her uncle to use in his baking. She also recalled that he had a bin in his kitchen cabinet which would store about 50 lbs. of flour. There was a sifter at the bottom, so the flour was sifted as it came out.

Mrs. Strauss still uses her uncle's cutting board, rolling pin and the juice glass he used to cut out "cakes." She also uses the same china sup and spoon he used to mix sour milk and soda.

Sugar Cookies

1 lb. light brown sugar
¾ cup butter and lard
4 eggs
1 cup sour milk
1 tsp. soda
4½ cups flour (not level)
1 tsp. cream of tartar

Mrs. Strauss offered some tips on how to make successful cookies. When measuring the flour, the cup should not be leveled, and when all ingredients are mixed, the dough is very sticky. She said, "It looks like you couldn't roll it out."

For best results, she said chill before rolling, preferably overnight, and return the bowl to refrigerator between rolling out small batches of dough.

She also said, "Roll the dough very lightly, using a little flour to prevent it from sticking." Roll the dough about ¼ inch thick and cut it with a juice glass about 2-2½ inches in diameter, dipping the cutter in flour each time.

The cookies may be decorated with sugar before baking, or with icing and colored sugar, coconut or walnuts while still warm. Bake for 12 minutes in a 350 degree oven. The recipe makes about 4-5 dozen.

Mrs. Strauss said she always makes a double batch of the cookies, and stores them in a lard can. Her children, Robert, Jr., 20, Deborah, 18, Richard, 17, and Steve, 15 happily make short work of the cookies.

Fortunately, Mrs. Strauss worked out the measurements for this recipe in the language we use for cooking today. However, the recipes recorded in the notebook are in the jargon used in the late 1800's. In case you're brave enough to try some authentic older recipes, here are some copied directly from Rickert's notes:

If you're feeding a crowd, try this recipe, titles

"600 Cakes"

12 quarts of Yeast
4½ qts. of Milk
8½ lbs. of Sugar
3¾ lbs. of Butter
3¾ lbs. of Lard
17 eggs
Cinnamon

For a smaller group, this might strike your fancy.

"350 Cakes"

7 qts. of Yeast
3 qts. of Milk
4¾ lbs. of Sugar
2 lbs. of Butter
2 lbs. of Lard
10 eggs

This recipe for "Lemon Cakes" uses some unusual ingredients.

4 lbs. of Sugar
2½ lbs. of Butter
2 dozen eggs

Continued on Page 44

Country Corner

Farmers are producing more - consumers eating less

By MELISSA PIPER

Farmers and their families work 10-14 hours per day to produce food and food commodities and while in 1975, a farm unit could produce enough for themselves and 50 other people, food consumption has hit a slump!

It hardly seems possible that in today's society where every imaginable food is offered for the consumer's delight, eating has decreased yet on the records it is very clear. In fact the food consumption rate for the people in the United States during the past year has never been lower since 1968.

Some of the largest declines in per capita consumption included sugar, fats and oils along with pork and lamb. The probable cause of these commodity declines being the increased prices. At the beginning of 1975 we experienced the great "sugar panic" which sent many people toward artificial substitutes and with the decreased number of slaughter hogs the price of pork climbed upward quickly.

But while prices caused the per capita consumption to come down, it should be noted that the consumer price index for all food in 1975 only increased by 8½ percent compared to the two previous years when it rose to 14 percent.

When we ponder over these statistics it would seem that the increases in the total expenditure for food must indicate long grocery bill tapes but in reality it is the snacking and restaurant meals that has really upsurged the figures.

Eating out was responsible for over one-half the increase in the food price index during the last portion of 1975. Fast food chains, the local lunch bar and the ice cream stand are getting more of our money each year while much of the groceries in our refrigerators and cupboards go to waste.

Our mobile society has certainly changed our way of living and eating! It would seem that today more than ever we are buying more food and yet eating less - confusing though it may seem.

Maybe the farmers should take a small vacation or become a little less productive and instead of feeding 50 people he could cut back to feeding 25. Well, although it seems tempting, today's farm family just won't give it a try because their labor combined with the most modern technology and chemical help will keep their production ever increasing. And whether the food goes to our home kitchens, grocery shelves or local hamburger stand, it has still been produced by the most efficient agricultural production unit - the farm family!

Historic

(Continued from Page 42

2 oz. of Ammonia
1 qt. of Sour Milk
6 lbs. of Flour
Ess of Lemon

Another interesting recipe found twice in Rickert's neat notebook was for "Daily Stock Yeast." Punctuation was nonexistent, and this reader was not quite sure of the directions, but here it is:

6 qts. of Water
2¼ lbs. of Flour
1 oz. Hops
2 oz. Mals

"Add Hops when boiling when Boiled 5 minutes take 1 qt. of Hop Water strain on Flour and make a Stiff paste boil balance of Hops 10 minutes longer strain on paste and let stand till cold then add the malt to desolver the paste till fine then take 1 qt. of Stock or 1½ qt. of Potatoes Yeast to stock away let raise about 9 hours. Use 4 qts of Stock to start Potato Yeast."

The casual reader of Rickert's notebook encounters a little shock following the several pages of recipes. After a page of scribbling comes this recipe:

Hoof Ointment

2 lbs. Pitch of Tar
2 lbs. Tallow
3 pints Kneds foot oil
Lampblack

Obviously, the horse which delivered all those delicious baked goods were not neglected, and their hooves received care equal to the lemon cakes and daily stock yeast.

Mrs. Strauss, out of a deep family interest and a knowledge of the worth of things past, also has the booklet published in 1912 in commemoration of the 100th Hope Hose Fire Company in Manheim.

The advertisements themselves are of great interest, but Elam Showers, the baker for whom her great uncle worked has a very enlightening ad. It read as follows: "Elam Showers; Bread and Cake Baker; Parties, Weddings and Funerals, Promptly Served on Short Notice. Orders Solicited. My Team Will Stop At Your Door and Serve You. North Charlotte Street, Manheim." These words of solicitation were attractively printed on a full page ad. The idea of having a team stop at the door and serve you must be one of the better customs of the "good old days."

Mrs. Strauss, who grew up in Manheim as Janet Atkinson, says her family was originally from Maryland, while her husband's family comes from the Brickerville area. She lived in Manheim for 21 years and she and her husband have lived on their present farm on Durlach Road at Ephrata RD1 for 21 years.

They own 10 acres, and raise horses as a hobby. They also raise a steer and a pig to butcher annually, but the hill behind their home is filled with sheep. Mrs. Strauss says they never had sheep until their oldest son was in ninth grade at Ephrata and got a pen of three through the Future Farmers of America.

Now all three boys own some sheep as well as the Strausses. The boys also have some hogs as FFA projects.

One pleasant by-product of raising sheep is wool. Mrs. Strauss has the wool dyed and spun into yarn, which she uses in crotcheting. She has a lovely wool afghan and says she makes her family wool sweaters, which are really warm.

Mrs. Strauss has saved many other family heirlooms which are of sentimental and historical value. One example is the account book of the father of her great uncle, Charles W. Rickert.

The elder Rickert did some work for the Sisterhaus at the Cloister and shows that he received for one day of plowing potatoes, $2.00. Another day he received $2.25 for the same work and on another day he received $2.25 for hauling manure. This was in 1844.

In 1843 he purchased 2 watermelons for $.20 and in 1856 he "kild one calf" for $.37½. In 1859 he received $1.62½ for butchering "3 haugs."

By comparison, in 1888 he purchased the following:

Suit of Clothes for Self $30.00; Dresses for Wife 25.00; Children's Clothes 20.15; Groceries 18.25; Crockery 15.20.

Account books which were so carefully kept then are becoming rare, but offer great insight into the life and times of our forebears in the last century.

Watching Mrs. Strauss bake and decorate those cookies on a gray, rainy day in a warm fragrant farm kitchen makes one's mind wander to those times which in retrospect seem simpler and perhaps more inviting.

The celebration of our nation's bicentennial is a good time to reflect on those times, not with a desire to return to those days, but with an open mind about how they contributed to what we enjoy today.

Here are the "sugar cakes" produced from a recipe supplied by Mrs. Strauss's great uncle from around 1890.

Diagnose the case - 'cholesterol-phobia'

By MELISSA PIPER

LANCASTER — Is "cholesterol-phobia" becoming our new national disease? If we are to believe all we hear on the subject then perhaps it soon may be!

Over the last three years we as Americans, have been deluged by material (on a multi media basis) telling us on one hand that serum cholesterol, due to eating certain foods, can add to the risk of heart disease while food producers lodge adamant campaigns for fresh unadulterated meats, produce and eggs. And what are we to believe - well the question still remains open for discussion.

One agricultural commodity which has recently been "grilled" on a national level is the egg. For ever since the American Heart Association announced their "blanket theory" concerning limiting eggs in the diet for the American public, a constant battle has raged between the National Commission on Egg Nutrition (NCEN) and the American Heart Association (AHA) and last but certainly not least - the Federal Trade Commission (FTC).

Following the AHA's report for diet restriction which included eggs, NCEN prepared a number of ads stating that there "was absolutely no proof that eating eggs in anyway increases the risk of heart disease." The battle did not rest there however and went instead into the courts and finally came under a ruling by Federal Judge, Ernest G. Barnes.

In December of 1975, the judge ruled against NCEN's advertisements after hearing a slateful of experts who testified from both sides of the "nest" as it were. Although Judge Barnes indicated no medical expertise personally, his judgement barred NCEN from running their ads because in part he felt that there was evidence that pointed toward eggs and foods high in cholesterol as increasing the risk of heart disease.

Some previous research conducted by the American Heart Association had pointed toward possibly linking high cholesterol foods (eggs included) as leading to arterial lesions and thus adding to the risk of heart disease. Because of these studies (which to our knowledge never involved the whole fresh egg) the Association decided to make public their theory on restricting cholesterol in the diet. This concept was to aid those people who needed specific restrictions but since no testing at that time could effectively screen individuals, the overall public was encouraged to eat less eggs.

The battle between the AHA and NCEN on the point of eggs in the diet is far from being concluded and will be discussed at a later date, however the egg issue is still being "fried and tried"

While foods from beef to butter to mayonnaise have been given the "evil-eye," eggs have certainly received much of the blame for containing high amounts of cholesterol And while research is still looking for the answers, many leading cardiologists still claim that eating eggs will not harm the average person In fact cholesterol is necessary for nerves in the body to transmit impulses throughout the body for without enough cholesterol the nervous system could not work Any

Photo by Grant Heilman

High in protein but

what about cholesterol?

animal-oriented foods add cholesterol to the body but even if no cholesterol was injested into the system the body would still manufacture the component at a steady rate. It is also interesting to note that the less cholesterol a person eats the more his body makes.

As in any type of disorder or disease though, people who are prone to heart disease possibly through heredity should perhaps limit their fat and cholesterol intake but forcing a restriction on everyone is wrong according to some noted authorities

Rigid diets, according to Dr Michael DeBakey, are going to affect "only a relatively small segment of the millions of people who have the basic abnormality of metabolism which leads to heart disease " DeBakey, the famous heart surgeon, has noted many times in public speeches that eating eggs plays a minute and possibly nil role in the incidence of heart disease The surgeon believes that metabolic functions perhaps are more relevant to the disease

Echoing his thoughts has been Dr. Christian Barnard, the acclaimed heart transplant surgeon from South Africa. At a press conference in Chicago earlier in the fall, Barnard told a gathering of newsmen and medical officers that there was still no proof that consumption of cholesterol causes cholesterol to appear in the blood stream. "Probably the most important cause of heart disease is heredity," Barnard stated.

Both men and many of their colleagues have scoffed at the idea that eating eggs will cause a person to drop over dead from a heart attack - precisely the idea many people have or as we have entitled it "cholesterol-phobia."

On the other hand, experts from the American Heart Association still believe that cholesterol consumption can add to the risk of heart disease.

Dr. Elliot Rapaport, current president of the American Heart Association has stated, "there is no getting away from the fact that there is a great deal of evidence from many sources to back up the suggestion that dietary cholesterol and saturated fats are casually related to coronary heart disease."

Rapaport feels that a low cholesterol - low saturated fat diet is "prudent" for the American public even though the scientific proof is not firmly cemented.

Thus the controversy from both sides still persists and what final conclusion will be offered is yet to come.

Due to the concern over cholesterol in eggs, egg substitutes, void of the component, flooded the market a few years ago. Lavish advertisements from television spots to magazine glossies expounded their obvious advantage - no cholesterol. They received consumer demand but not without some scare tactics. A recent study conducted at

Diagnose

(Continued from Page 45)

the University of Illinois by Dr Kasmail Navidi and Fred Kummerow comparing the whole egg with the substitutes has brought many interesting aspects to the surface - some of which bear relating

One-hundred grams of an egg contains 12 8 grams of protein while the substitute contains 1 8 grams less And while the fat and caloric content is nearly equal the whole egg contains about three times the amount of phosphorus and also about 20 percent more calcium

Whole fresh eggs also contain more naturally occurring vitamins - especially in the "B" category

Eggs are a natural source of protein as they were designed to support life and while containing cholesterol they do not offer artificial components

The egg substitute tested contained egg white, corn oil, non-fat dry milk emulsifers, cellulose, xanthan gums, trisodium, triethyl citrate, artificial flavors, aluminum sulfate and artificial colorings to name just a few ingredients

In another study it was also revealed that the egg substitute contained about 10 times more carbohydrates than fresh eggs and were extremely high in sodium, which has been limited in almost every heart patient's diet.

A statement recently printed in "Consumer Reports" concluded their issue on egg substitutes and fresh eggs in this manner, "scientific evidence regarding cholesterol and coronary heart disease is still incomplete."

"The effect of cholesterol intake on specific individuals is extremely difficult to predict or evaluate."

The consumer report also noted that other factors such as high blood pressure, lack of exercise, heredity and obesity may also be a part of the risk pattern, and that diet alone may not be the answer.

Regardless of what side of the cholesterol fence you ride on, heart disease poses a serious problem for us all. It is regrettable that backbiting and scare tactics purely for financial accruement must cloud the issue of research. If the real causes of the disease are to be found then perhaps it is time to spend more money on legitimate research instead of costly color inducments. The facts are needed and soon if we are not to perish from acute "cholesterol-phobia."

'Theme rooms' discussed at decorating workshop

LEESPORT - What does the term "free association" have to do with decorating your home? If you were one of the more than fifty people who attended the "Do It Yourself" program at the Agricultural Center on March 4, you know that it is the key to the "theme room," the latest in home decorating Want to try it? The theme can be almost anything. Think nautical, woodsy or Irish, then free associate. Write down all the things that come to mind when you think of that theme. Beginning with color, incorporate your thoughts into your decorating scheme and presto, you've got a "theme room!"

Thursday night's program was sponosred by the Cooperative Extesnion Service Homemaker's Division and presented by the Armstrong Cork Company. Mrs. Strickler, Home Economist for the Extension Service, introduced the Armstrong Interior World Consultant, Sue Reese, who led the audience through a series of slides and questionaires aimed at breaking down the average person's inhibitions regarding do-it-yourself projects. In addition to providing tips on planning a decorating scheme, Sue's program included practical information on how to install ceilings and floor coverings and the use of simple tools in home decorating projects Mr. Crick from the Merritt Lumber and Home Center in Reading was on hand to answer specific technical and merchandizing questions presented by the audience following the program.

Society 7

Society 7 met recently at the home of Mrs Carlton Homsher, Ronks. Devotions were led by Mrs. Gladys Smeltz. Vanessa Homesher have a piano solo.

Paul Rowe discussed the care of house plants and how to display hanging baskets. Mrs. Mary Ann Landis also joined the program to discuss the hanging baskets she had made. A recipe was given for water plants once every four weeks along with regular waterings. Mix 1 teaspoon baking powder with 1 teaspoon espom salts and add to 1 teaspoon salt peter and ½ teaspoon clear ammonia.

Society 7 will entertain Society 25 on March 13 at the Leacock Presbyterian Church The covered dish luncheon will begin at 1 p m Mrs I. C Reidlinger will give a program on America

Society 6

Farm Women Society 6 met recently at the home of Mrs. Musser Heisey.

Mrs Anna Geyer presided at the business meeting where a discussion was held on the Spring Rally.

An auction was held during the meeting with Mrs Harry Shonk as the auctioneer. Speaker for the day was Fay Stoner an 4-H IFYE from Lancaster.

The April meeting will be held in the home of Mrs Emery Wolgemuth

Society 23

The Society of Farm Women 23 held the March meeting at the home of Mrs. Leroy Funk, Washington Boro R1, with devotions in charge of Mrs. Lester Newcomer.

During the business meeting it was voted to contribute $25.00 to the County organization of Farm Women, $10.00 to the Easter Fund and $45.00 to the Penn Manor 4-H club to pay for a meeting place as the schools are no longer available.

Plans were made to have the food stands at the following sales: John Thomas on Mar. 6, Ross Barley on Mar. 27, and John Eshleman on Apr. 3.

The April meeting will be held at the home of Mrs. Robert Miller of Washington Boro. Preceding the meeting a program is planned with the guests at the Shady Lawn Rest Home on Columbia Avenue.

Home on the Range

One of our readers from the Berks County area sent us a recipe in the bicentennial category. "Steak Roly-Poly" is an older family dish but seems to be a good variation from the everyday meals. Thanks to Mrs. Kerschner!

Do you have a recipe for Spiced Cantaloupe? One of our readers would like a hint in how to prepare the dish before canning season arrives.

Also this week we have some good recipes for main dish meals. Swedish Meatballs and Spaghetti Sauce with Pork sound mighty tasty!

If you have a favorite recipe why not send it along. But please be sure to include all cooking instructions and please write on one side of the paper only! For a special introduction to our bicentennial recipes yet to come, see our Homestead Notes page where an Ephrata area farm wife shares her methods of baking - the old Moravian style.

Steak Roly-Poly

Mix:
1 cup freshly mashed potatoes
1 cup flour
1 teaspoon baking powder
2 tablespoons shortening
½ teaspoon salt

If necessary, add enough water to make a paste that can be rolled out. Roll out a quarter of an inch thick. Mix a cup of chopped cold beef with minced onion, salt and pepper and moisten with gravy. Spread this on paste. Roll up paste until ends meet. Put in a greased casserole with a ½ cup boiling water and drippings. Bake until rich brown basting with gravy from time to time.

Mrs. Leroy Kerschner
Lenhartsville, PA

xxx

Vegetable Cake

1 cup Wesson oil
1½ cups sugar
3 egg yolks
3 tablespoons hot water
1 teaspoon vanilla
1 cup ground raw red beets
1 cup ground raw carrots
2 cups flour
2 teaspoons baking powder
1 teaspoon salt
1 teaspoon cinnamon
1 cup nuts
3 beaten egg whites

Beat together first five ingredients until light and fluffy. Mix in vegetables and add dry ingredients and nuts. Fold in egg whites last. Bake at 350 degrees for 30-45 minutes.

Mrs. J. L. Zimmerman
Terre Hill, PA

xxx

Doughnuts

2 packages yeast dissolved in ¾ cup lukewarm water with 1 tablespoon sugar
1 quart potatoes, mashed
½ cup sugar
2 tablespoons salt
1¾ quart water

Mix the above ingredients in the evening and let set at room temperature. Add: 3 eggs well beaten, 1½ cups sugar, 1 pint butter or lard melted and 1 cup milk scalded and cooked. Add yeast mixture to this plus about 7 cups of flour. Let rise until double in size. Roll, cut and fry in hot oil at 360 degrees. Yields about 160 doughnuts.

Grace Horst
Newmanstown, PA

xxx

Spaghetti Sauce with Pork

2 pounds pork steak, cubed
1 tablespoon lard
1 teaspoon salt
½ teaspoon Italian seasoning
¼ teaspoon pepper
½ cup chopped onion
1 can tomato sauce
two-thirds cup water

Cut pork into small pieces and brown in shortening. Pour off drippings and sprinkle with salt and seasonings. Stir in onion and tomato sauce, add water. Cover and cook slowly for 35-40 minutes until meat is done.

Jenna Davidson
Westport, PA

xxx

Swedish Meatballs

1 can cream of celery soup mixed with ½ can water
1 pound ground beef
two-thirds cup fine dry bread crumbs
1 egg
2 tablespoons minced onion
1 tablespoon chopped parsley
1 teaspoon salt

Mix ¼ cup soup mixture with other ingredients and shape into balls about 1 inch in diameter. Brown meatballs in shortening. Reduce heat and add remaining soup mixture and simmer about 30 minutes. For a variation use cream of mushroom soup.

Mrs. Franklin Reichard
Lititz, PA

xxx

Chocolate Dessert

32 marshmallows (large)
½ cup milk
½ package chocolate chips
1 cup heavy cream
¼ cup chopped nuts
2 cups graham cracker crumbs

Soften marshmallows in milk in the top of a double boiler. Add chocolate chips when melted. Let cool until mixture thickens. Fold in whipped cream and nuts. Spread ½ of crumbs in bottom of a dish. Pour chocolate mixture into dish and cover with crumbs.

Fannie Stoltzfus
Madisonburg, PA

xxx

Green Bean Casserole

½ pound hamburger
1 quart green beans
5-6 medium potatoes
1 can mushroom soup

Brown and season hamburger. Cook potatoes and slice in baking dish. Add hamburger and green beans. Pour undiluted mushroom soup over the top. Cover and bake 350 for one hour.

Lynda Sensenig
Nottingham, PA

Society 1

Farm Women Society 1 met recently at the home of Mrs. Graybill Hollinger with Mildred Shreiner as co-hostess.

Plans were made for the Spring Rally trip to Gettysburg and for the bus trip to Holland, Michigan on May 13-15. Reservations should be made with Mrs. Daniel Brubaker by phoning 733-7425.

The Society voted to participate in the Lititz Community Bicentennial celebration in August.

Society 14 will entertain Society 1 at the Farm and Home Center on March 20. Fay Stoner will be the speaker.

The Society voted to donate to the following charities, Cerebral Palsy, Easter Seals and the Association for Retarded Citizens.

Mrs. David Fyock demonstrated the Ukrainian art of decorating eggs.

The next meeting will be held April 3 for a covered dish luncheon at the Farm and Home Center. Mrs. Frances Dietz will demonstrate the art of Japanese Vegetable carving.

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

Bored with your diet?

If you are thinking thin and trimming inches, take the agony out of dieting. Standing by to give you a healthy assist in lowering your calorie intake while still providing great taste is the freshest fruit around - grapefruit. It's in its prime now.

According to the U.S. Department of Agriculture, there's enough grapefruit available to keep you eating this fruit fresh right into summer.

Because of grapefruit's unusual combination of tart and sweet taste, it's a fruit that can be used in any part of a menu. It performs well in sparking appetites for any meal to follow. It combines well with shrimp for a colorful and tasty cocktail with a small calorie tag.

Served with slices of avocado, it becomes a salad temptation. It goes well in gelatin salads because it combines so well with other foods. It can add zest and interest to broiled fish or poultry dishes.

A touch of honey can add a touch of class to your broiled grapefruit dessert. Another way to broil it is with a topping of bubbling brown sugar and spice - nutmeg, cinnamon, or your choice.

Some calorie-cutting ideas might include this salad for a healthy lunch:

Grapefruit and Tuna Salad

Salad greens
2 cans (6-½-7 oz. each) tuna, drained
1 cucumber sliced
2 cups grapefruit sections
4 radishes, sliced

Arrange salad greens on service plate. Place chunks of tuna in middle. Surround with cucumber slices, top with grapefruit sections and garnish with radish slices. Serve with low-calorie dressing. (Serves 4.)

Chicken and Grapefruit Mold

2 cups grapefruit sections
2 envelopes unflavored gelatin
1-¾ cup cold water
2 chicken bouillon cubes
½ teaspoon salt
1 cup diced cooked or canned chicken
½ cup diced celery
2 teaspoons minced onion
pimento strips
salad greens

Sprinkle gelatin over cold water in saucepan. Add bouillon cubes and stir over moderate heat until gelatin and bouillon cubes are dissolved. Chill until consistency of unbeaten egg whites. Fold in grapefruit sections, chicken, celery and onion. Turn into 1-½ quart mold and chill until firm. Unmold on salad greens and garnish with pimento strips.

xxx

Tips on Sewing Quilted Fabrics

This season's fashion fabrics often come quilted. They work well in vests, jackets, jumpers, hats and handbags. When working with quilted fabrics, remember to choose a pattern design that is simple, without many details or gatherings.

When cutting pattern pieces, do not place them on a fold. Their bulkiness can cause distortion. Transfer pattern markings to the fabric with tailor's tacks then connest track marks with chalk - instead of using a tracing wheel and carbon paper

Quilted garments tend to be bulky. But in some areas, bulk can be reduced. Clip darts and press open. Remove excess batting by pulling it away from the fabric cover. Treat seams by cutting batting and lining close to the seam line, then pulling them away from outer fabric. Zigzag seams to prevent raveling. Or, if the garment is unlined, bind seams with bias tape. Press open all seams.

Make facings from unquilted fabrics. If companion fabrics aren't available, pull batting and lining away from excess quilted fabric and use it as facing material. Use decorative trims, such as fold-over braid in place of facings.

Mark hems carefully. Machine stitch one-quarter of an inch from the fold within seam hem allowance Then remove quilt batting from hem allowance

Machine buttonholes are best for quilted fabrics. When inserting a zipper, remove batting from seam allowances

Society 24

Society of Farm Women 24 met recently at the home of Mrs. Ross Noffsinger, Leola. A total of 23 members answered to roll call, which was "family ancestors"

After the business meeting, conducted by Mrs. Jack Golston, president, we enjoyed a very informative program presented by Dr. J. Calvin Wenger, of Lancaster, Penna. The title of his presentation was "The Plain People of Lancaster County." Delicious refreshments were served by our hostess.

Society 5

Farm Women Society 5 met recently at the home of Mrs. Luke Bruckhart. John Yocum served as the speaker

The next meeting will be held on March 27 at the Salem United Methodist Church in Manheim at 1 30 p.m The group will be entertaining Society 23 and Mrs Lois Will will be the speaker

What's New

Homesteading Book Released

"Homesteading" a book which provides a practical guide for the new country dweller has recently come on the market. Written by Patricia Crawford, who bought a 27-acre mini-farm near Philadelphia, the book deals with her life on the land. Stuffed with chapters on raising flowers, nuts and herbs and building a greenhouse and family dwelling, the book offers suggestions along with telling personal views on the subjects.

The book is available in paperback form from Collier Books, 866 Third Ave., New York, New York 10022. Cost is $3.95.

Plastics may replace needed body parts

UNIVERSITY PARK — The Penn State chemist who developed a new c[illegible] plastics says that they have promising potential for use in replacement parts for the human body.

"Existing artificial biomedical materials," says Dr. Harry R. Allcock, professor of chemistry, "often trigger blood clotting, wear out, irritate or even poison body tissue, or fail to degrade in the body when their usefulness has expired."

Such defects can be avoided, Allcock contends, with new materials he has designed and made over the past decade: the first inorganic plastics since the silicones.

What's more, he says, the new materials are safe. "As far as we know, none is carcinogenic or poses any other threat to living systems."

Allcock's work is reviewed in "What's Happening in Chemistry," a January, 1976 publication of the American Chemical Society.

The new plastics, Allcock says, could be used for artificial heart valves, blood-vessel sections, artificial kidney components, sutures, etc.

Allcock's discovery imparts a versatility to plastics which, he says, is achievable in no other polymer system.

"Self-destructing sutures could be made, for instance," according to Allcock. "They could be programmed to dissolve harmlessly into body fluids after they have done their duty as sutures."

Animal implantation tests of various prosthetic devices made with the new plastics are under way at several medical schools, Allcock says.

TRIVIA

Horsepower

Horsepower is the power needed to lift 33,000 pounds a distance of one foot in one minute—about one and one-half times the power an average horse can exert

Ida's Notebook

Ida Risser

On a sunny day last week, I set out with my Aunt to find the home-farm of John Sprecher who lived one hundred years ago in the Bareville area. We didn't find it; but it was interesting to see what other people were doing on the spring-like day.

The first inquiry was at a business place where the man assured me that he had lived in the area for 40 years but had never heard of a Sprecher farm. He sent me to an Amish farm where the ladies were washing barn windows and the man was hauling manure after a large tractor loaded his horse-drawn spreader. Then on to a neighboring farm where an old couple with several middle-aged daughters were scalding and cleaning ducks. They knew where another Aunt had lived but not where my grandmother was raised. Two more stops and we gave up for that day. The one Amish home had 4 year old twin boys who were swinging on a tire tied to a large tree; of course, they couldn't help me. The next lady had a large quilting frame set up in her kitchen and was stitching away merrily but convinced me it wasn't her farm that I was hunting.

We did get to see the spot where five roads converage; or maybe, I should say where they go out like spokes on a wheel. It is an unusual sight.

xxx

My sister tells me she had an unhappy experience with her many potted plants as an aftermath of her trip to Florida this winter.

It seems she read that sea water was very healthful as it contains minerals and so she brought a gallon jug home from Florida and put a tablespoon on her oatmeal each morning. One day she was in a hurry and mixed her water jugs and unknowlingly put sea water on her plants. A few days later the greenery was wilting and the leaves were turning yellow and she was most unhappy as she realized what had happened.

She then flushed them with fresh water and only time will tell what the results will be.

Society 17

Farm Women Society 17 met last Thursday at the Buck Ball Park for a progressive dinner. Mrs. Ernest Shaub's home was the first stop for fruit drink and crackers. For salad the group visited the home of Mrs. John Lefever. The main course was served by Mrs. Richard Lefever with the dessert provided by Mrs. Frank Leed.

During a business meeting which followed the dinner, donations were made to Cutler Fund, Meals on Wheels and the Easter Seals Society.

Society 17 will be entertaining Society 4 on April 1 at a meeting at Shady Maple, Mrs. John Myer will be the speaker.

There are a couple of great feelings all growers share Seeing a uniform stand of seedlings pop up early in spring And harvesting a record corn harvest Planting Funk s G-Hybrids brings you those feelings at both ends of the growing season

High germination, early emergence and seedling vigor are bred-in to all Funk s G-Hybrids Plant them early in the spring, even with minimum tillage And days later see those eager seedlings pop through the soil and spring to life

This head start means young root systems and stalks have every chance to develop added strength to stand through storms and drouths Planting early also means making the most of your growing season, and beating any bad weather in the fall

This spring, why not get off to a fast start See your Funk's G dealer now for the hybrids that can't wait to shoot out of the spring soil to hit the high yield goals you aim for each fall

Thomasville 4-H meets

The Thomasville 4-H Community club met at the 4-H Center for there monthly meeting. The American and 4-H pledges were led by Roy Thompson and Ned Rentzel respectfully. Songs were led by Allen Keeney, Bonnie Wire and Nancy Eisenhart

These reports were given; County Council, Paul Myers III Achievement Night Kelly Rentzel, Promotion Week. Bonnie Wire, County Achievement Night Tina Parr

Kick-off week will be observed by the club by placing an exhibit in Dauphin Deposit Bank downtown York, members will also be making posters which will be judged on March 13, 1976 at the Family Fun Night at the 4-H Center.

Members will be collecting funds for the Hemophian Drive in the Thomasville and Lincoln Estate area. They also will be collecting blue coupons for the Kidney Foundation.

Coming events announced were· Mar. 13, Family Fun Night, Mar. 16 Roller Skating party at Dellco, Apr. 10 Winter Round-up, Mar. 6, 5 County Teen Leader Retreat at Gettysburg with these members attending Jonathan Myers, Tim Eisenhart, Bonnie Wire, Gary and Tommy Welsh and Paul Myers III.

The next meeting will be held March 23, at the 4-H Center when sign up for projects for the year will be completed

For the Lord of all will not stand in awe of any one, nor show deference to greatness, because he himself made both small and great, and he takes thought for all alike

Wisdom, 6-7

Meat consumption decreases

CHICAGO, Ill. — Do you think people have reached the saturation point in meat consumption . . . that the human stomach will hold just so much and can't really handle much more meat . . that people eat so much meat anyway there's really no need for the meat industry to promote its products?

If that's what you think, consider this: the average daily per capita consumption of all four red meats is 2 8 oz. of cooked, edible meat, according to the National Live Stock and Meat Board. That's less than one 3-oz serving. The U.S. Dept of Agriculture recommends from 3-6 oz of foods from the meat group each day for adequate nutrition.

Then what's all this business about Americans eating an average of 180.7 lbs. of meat in 1975 — which on a daily basis would be about half-pound a day? The Meat Board's Department of Nutrition Research - Education explains that those larger figures are carcass weight — the on-the-rail weight — not what actually goes into the stomach. The carcass weight figures are used to determine what meat production amounts to on a per capita basis — and are helpful in making comparisons with other foods, which are tabulated as raw rather than cooked products.

But carcass weight, when converted to consumption figures, gives the impression Americans eat a lot more meat than they really do

What is why once a year, the Meat Board breaks the figures down to actually-eaten basis.

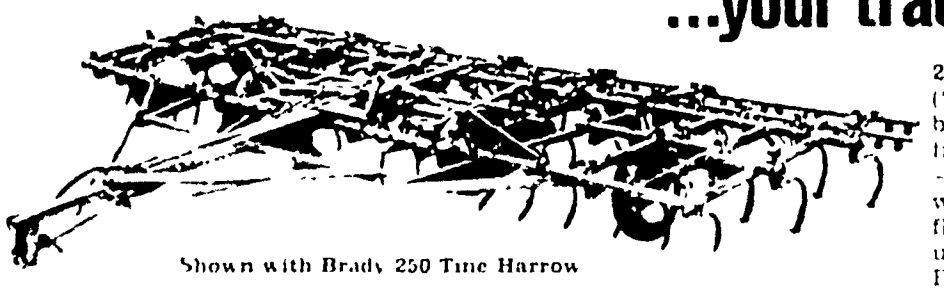
BRADY field cultivators

built for speed...strength...clearance...flexibility ...your tractor power

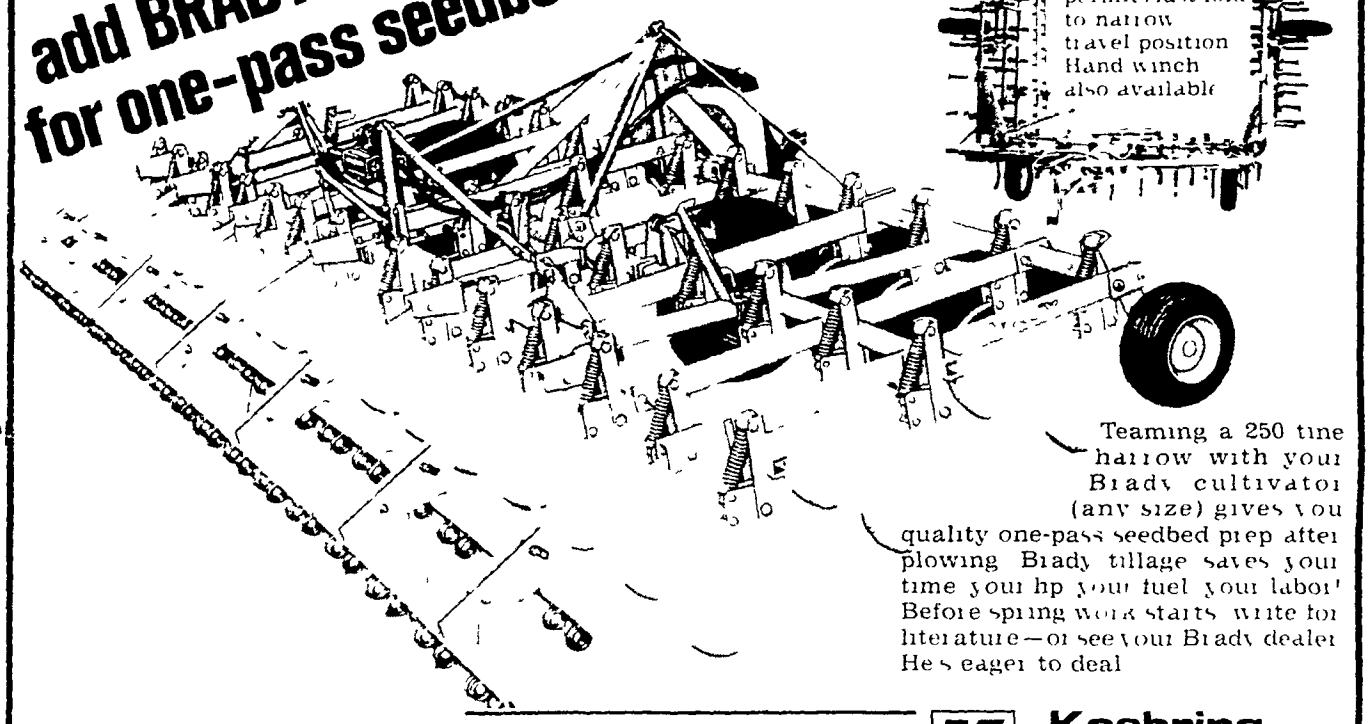


Shown with Brady 250 Tine Harrow

2540 Wide Wing field cultivator (23½ to 28½ ft widths) will match big tractor power and put your fields in good seedbed condition - fast. The big, heavy duty 2540 with flexible wings and 4-wheel flotation will work your fields uniformly better than ever. Front rank spacing is 37½ inches, rear rank 24 inches. Shank spacing is 6 inches. Built Brady rugged on a welded 2½ in. square tubular steel frame.

2500 field cultivator (11½ to 16½ ft. widths) is built like the bigger 2540, features same good trash clearances and shank equipment, same Brady exclusive rear mounted rockshaft that lifts the cultivator as it moves forward. Famous Brady strength too. Brady field cultivator shank (No. 69058) is guaranteed for life. Drawn and 3-point hitch models available.

add BRADY 250 tine harrow for one-pass seedbed prep



Hydraulic wing lift (optional) permits fast fold to narrow travel position. Hand winch also available.

Teaming a 250 tine harrow with your Brady cultivator (any size) gives you quality one-pass seedbed prep after plowing. Brady tillage saves your time, your hp, your fuel, your labor! Before spring work starts, write for literature—or see your Brady dealer. He's eager to deal.

The incredible milk making machine

Dairy cows do much more than produce wholesome milk and nutritious meat. Being female, these incredible milk making machines tidy up nature's house and make do with leftovers. They graze where plows cannot go and transform inedible food byproducts unfit for human consumption into nourishing and necessary milk.

And cows are naturalists, too. They irrigate and fertilize wherever necessary for future grazing lands and leave enough weed and grass stems for sheep and goats to enjoy. They juggle nature's imbalance and tolerate man's shortsightedness.

Every year dairy cows munch a mountain of some 13 million tons of byproducts. Because of microorganisms living in their rumen, cows have the unique ability to transform these worthless materials into nutrients that can be used to produce milk.

Something more from something less is a refreshing change in this era of decreasing expectation. Cows graze placidly while man frets about decreasing oil supplies and sometimes overlooks his four-footed natural resource.

Animal agriculture is being challenged today as a luxury our modern society can no longer afford. Some contend that grain produced on an acre of land should be fed directly to humans and not be converted into animal products. Others suggest eating less meat in this country would solve world hunger elsewhere.

That simply is not true.

Feed for dairy cows consists mainly of rough, fibrous materials unsuitable for man, or coarse feed grains man doesn't eat in large amounts. In addition, cows forage on lands that would provide little or nothing to human food requirements. In fact, taking cows out of the food producing business, would actually decrease the food available for human consumption.

The dairy cow is the most efficient farm animal in converting forage and grain into food. Future agricultural planning should concentrate on crop and animal production that will provide the greatest yield for the lowest cost. It is estimated that cows can be mainatined on a ration of 80-100 percent non-grain feeds.

Every year about 350,000 acres of farm land on the fringes of America's suburbs are taken out of crops and turned into condominiums and high-rises. The lost acreage is quality farm land with rich topsoil. And even though the U.S. has 470 million acres of cropland, man should be ever more thankful for the cow.

Yes, be thankful for that gentle creature, the cow, that walking garbage collector who does her bit to make our lives better. For only she and her ruminant club members can eat forage and contentedly chew cuds to make milk that's necessary for the nation's diet.

Pork Queen chosen by Berks producers

By JUDY MITCHELL
Berks Correspondent

KUTZTOWN - The Berks-Lehigh County Pork Producers held their annual banquet on March 5 at the Grange Hall here. In addition to giving association members and their families an opportunity to get together socially for an evening of fine food and dancing, Friday's banquet was also the occasion for the final selection of the 1976 Berks-Lehigh County Pork Producers Queen. Contestant's for the title this year were Joan Dietrich, a tenth grade student at Kutztown Area High School who is also enrolled in the Food Preparation Program at Berks County Vo-Tech School, daughter of Mr. and Mrs. Clifford Dietrich of Lenhartsville R1, and Ardeth Wetzel, an 11th grade student at Northwestern High School enrolled in the Vo-Ag Program at Lehigh Vo-Tech School, daughter of Mr. and Mrs. Franklin Wetzel of Kempton R2.

Following the final phase of the contest, the personal interview conducted Friday evening by Donald Reinert, an agricultural instructor at Kutztown Area High School, Miss Dietrich was announced to be the winner of this year's contest and Miss Wetzel the first runner-up. Each girl had submitted an application and an original pork recipe prior to the banquet. The girl's dishes in the order in which they were rated by the judges are:

Creamy Mushroomed Pork Chops

4 pork chops, ½ to 1 inch thick
seasoned flour for dusting
2 tablespoons butter
½ pound fresh mushrooms
2 tablespoons finely chopped onions
1 cup sour cream
1 cup chicken bouillon
3 dashes white pepper
2 cups cooked noodles
¼ cup shredded cheese

Preheat oven 350 degrees. Dust chops and brown. Slice mushrooms and saute them quickly in butter with onions. Stir flour into sour cream. Stir and heat just to boiling. Slowly stir in bouillon. Heat to boiling.

Joan Dietrich

Mock Chicken Scallop

1 pound lean pork
1 eight-ounce package noodles
2 cups milk
3 slightly beaten eggs
1 teaspoon salt
½ cup corn flakes
3 tablespoons butter or margarine

Cook meat slowly in hot water to cover until tender; cut into small pieces. Cook noodles in meat stock, adding more water if necessary. Combine meat, noodles, milk, eggs and salt; pour into greased two-quart casserole dish. Bake in pan of hot water in moderate oven (350 degrees) until set, about 1 hour. Cover with buttered corn flakes last 15 minutes.

Ardeth Wetzel

The girls were presented with gift certificates from the Association, Joan's in amount of $30.00 and Ardeth's $20.00, for the Diana Shop, Crest Plaza, $10.00 of which was donated by the Diana Shop. Each girl was also presented with a jewelry box from the Association and a charm bracelet courtesy of Mr. and Mrs. Edward Oswald of Slatington. Mrs. Catherine Rabenold, Kutztown R2, Mrs. Winifred Oswald, Slatington R2, and Donald Reinert, Lenhartsville R1 were judges for the contest, and Donna Lazarus of Whitehall, last year's Pork Producers Queen, crowned the new Queen.

As the 1976 Berks-Lehigh County Pork Producers Queen, Joan will represent the association at pork sales and local and county fairs in the coming year. Since Pennsylvania is one of the few states in the Country which does not have a State Pork Producers Queen, the Berks-Lehigh County Association hopes to have Joan represent the Pork Producers at the Farm Show in Harrisburg next January.

Storing Fruits

Canned fruits stored in a cool dry place will retain their best quality for as long as a year from date of purchase When stored too long or at too high a temperature canned fruits lose quality They re still safe to eat though, if the seal isn't broken Freezing doesn't make canned fruits unsafe to eat unless it breaks the seal of the container and lets in bacteria that cause spoilage

WHAT VITAMINS DO FOR US

It is necessary to know how the cells in our bodies work if you are to understand why you need vitamins.

To start with, do you know how many cells there are in your body? Billions of cells is the answer, and all of them work together to perform chemical functions that are essential to life.

But assisting each cell to do its specific tasks are numerous enzymes. It's estimated that in helping the cell to do its jobs, individual enzymes perform their tasks thousands of times a minute.

Since it's also estimated that each cell contains hundreds of different enzymes, a cell is obviously one busy place.

But scientists tell us that some enzymes can't work alone. They need coworkers, known as coenzymes. And this, friends, is where vitamins come in for many coenzymes are, in fact, vitamins — or vitamins are needed to produce them.

The primary function of vitamins is to assist enzymes in carrying out many of the chemical happenings that are essential to life

The first vitamin to be discovered (in 1913) was, of course, named vitamin A. Scientists knew before 1913 that something besides protein, fats, carbohydrates and minerals was at work in foods — something that encouraged growth But they didn't know what it was until in research with animals vitamin A was discovered And this was followed over the years by the discovery of the whole host of vitamins we know now

Vitamins are separated into two classes — fat-soluble vitamins and those known as water-soluble. Vitamins A, D, E and K are fat-soluble They always appear in the fat portion of foods In our bodies, they all are stored to some degree Thus we can build up reserves

But a word of warning, this also means we could build up toxic levels of fat-soluble vitamins in our bodies.

As for all the other vitamins — they are water-soluble and our bodies do not store them. They are constantly being excreted and thus must be replenished from our daily food. Next week, and the week after, we'll get into what the different vitamins do.

Continent

A continent is defined as a large unbroken land mass completely surrounded by water

Dairy club meets

At a meeting held recently at the home of Lori Stein, Mohrsville, the Northern Berks Co 4-H Dairy club elected officers for 1976 Elected president was Nedra Yoder of Shoemakersville, vice-president was Patricia Dreisbach of Hamburg, secretary, Connie Ohlinger, Mohrsville; treasurer, Cathy Ohlinger, Mohrsville; historian, Harold Dietrich, Hamburg; news reporter, Carol Dreisbach, Hamburg; song leaders, Larry and Lance Christman, Hamburg.

Club members participated in the nationwide Judging Contest sponsored by **Hoard's Dairyman** and made plans for a roller skating party to be held in April. The club also voted to provide calves for the Dairy Week exhibition to be held at the Berkshire Mall June 14-19

The next meeting will be held on March 25 at the Mohrsville home of Connie and Cathy Ohlinger.

Broilers 'boiling'

Placements of broiler chicks in the Commonwealth during the week ending February 21 1976 were 1 448,000 The placements were 20 percent above the corresponding week a year earlier, and 10 percent above the previous week Average placements during the past 10 weeks were 11 percent above a year earlier Settings for broiler chicks were 2 277,000, 3 percent above the previous week and 17 percent above the comparable period a year earlier The current 3 week total of eggs set is 13 percent above the same period a year ago Inshipments of broiler-type chicks during the past 10 weeks averaged 100 compared with zero a year ago Outshipments averaged 208 000 during the past 10 weeks, 12 percent below a year earlier

21 STATES Placements in the 21 States were 60,423 000 2 percent below the previous week but 5 percent above the same week a year earlier Average placements during the past 10 weeks were 9 percent above a year ago Settings were 78,614,000 1 percent above the previous week and 10 percent above a year earlier The current 3-week total of eggs set is 10 percent above the comparable period a year ago

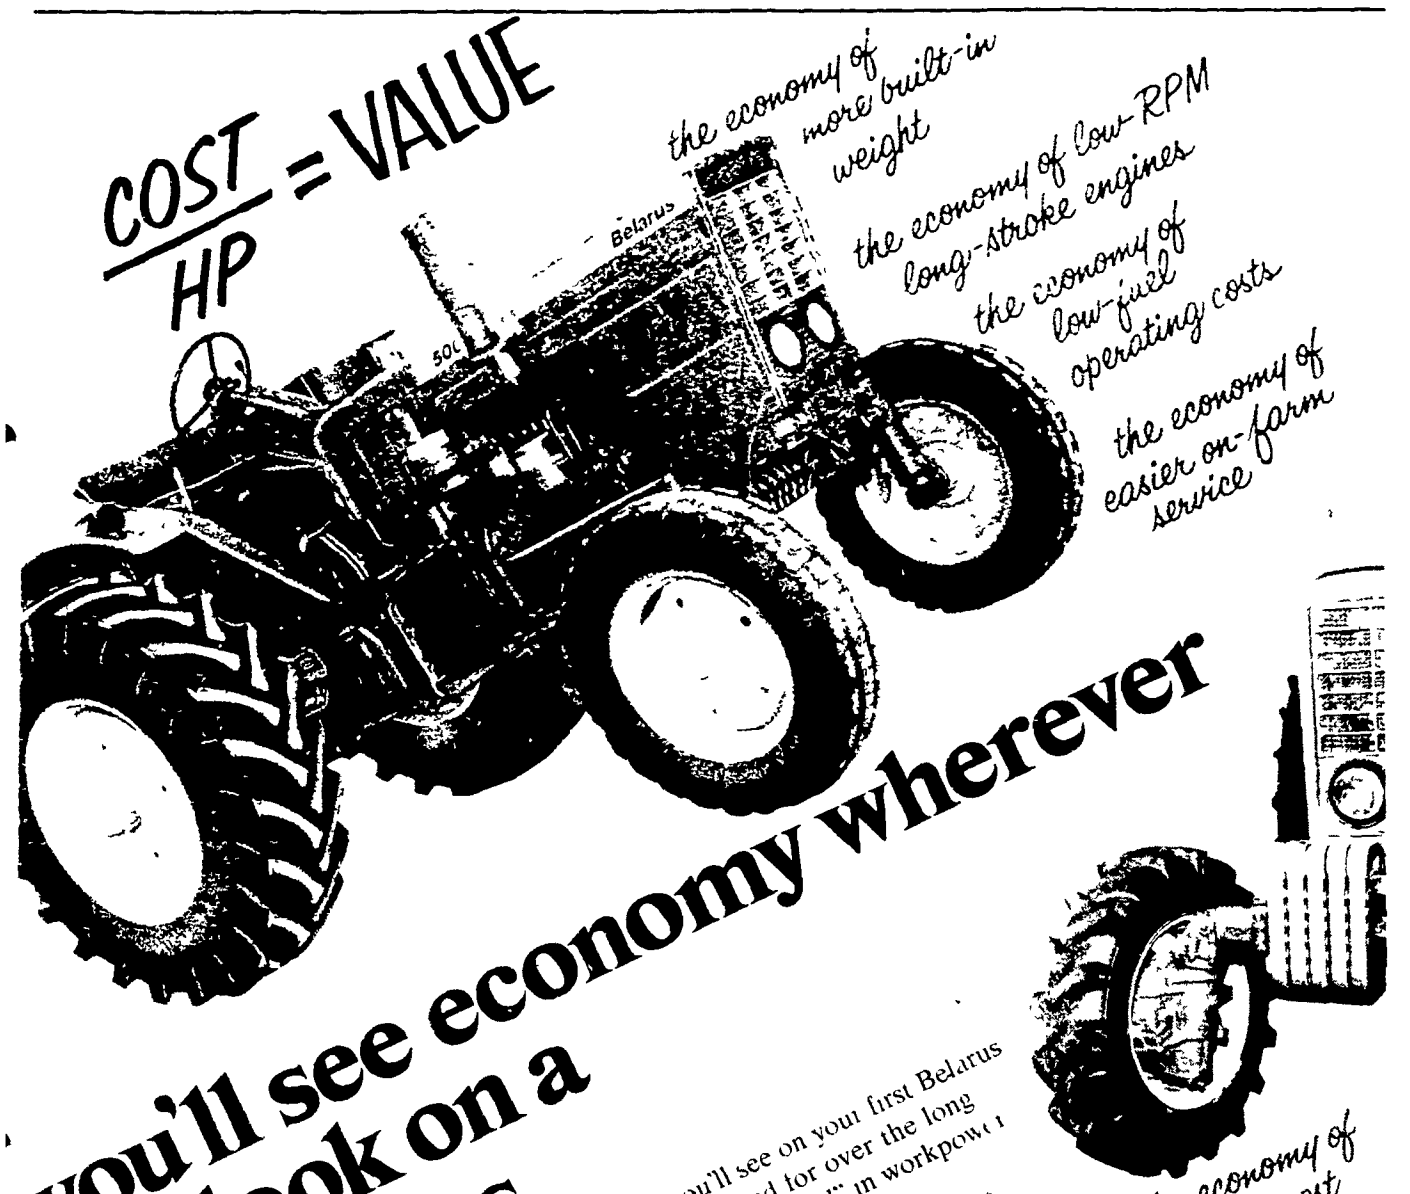
COST/HP = VALUE

the economy of more built-in weight

the economy of low-RPM long-stroke engines

the economy of low-fuel operating costs

the economy of easier on-farm service



you'll see economy wherever you look on a Belarus

the economy of low-cost 4-wheel drive

Looking won't cost you a dime. What you'll see on your first Belarus tractor is sizable savings, both in mitial cost and for over the long haul And Belarus' unique economy comes "wrapped" in workpower and dependability famous the world over.

Every Belarus tractor is a hard-lugging, long-life heavyweight diesel. Consider the rugged 70-hp Model 500, the 70-hp 520 with its unique 4-wheel drive, the 57-hp 400 and the 420 with 4-wheel drive, or the powerful utility 250. They're sold through a modern dealer network Backed by fully stocked regional parts and service centers. All horsepowers are manufacturer's engine ratings.

At your Belarus dealer, be sure to ask about the 4-wheel drive (exclusive) that automatically engages on-the-go at 6% slippage It provides almost unbelievable traction at a cost that could make a 4-wheel believer of anyone

If you want downright workpower at a down-to-earth price . . and the kind of economy you haven't seen for years, you should look at Belarus before you buy. For more information on Belarus tractors or a franchise, please write one of the addresses below.

Gardening renews heritage

For anyone who is a garden enthusiast, the bicentennial is an opportunity to renew, strengthen and enrich our gardening heritage. We have many fine gardens that have come down to us from the past These were in general the gardens of the well-to-do who had the means and the leisure time needed to develop and care for them

At no time in our history has the interest in gardening - and the means to indulge it - been available to so many people as it is today Gardens planted now in the spirit of the bicentennial can enrich out lives, the lives of our children and even our children's children.

A bicentennial garden may be anything that you want it to be. It may be a garden of the past, modified and changed to fit the needs of our time. It may be a garden of 1976 based around a patio, a balcony or a rock garden. You can also commemorate the bicentennial by planting a tree. This would be particularly appropriate since a tree lives for many years and throughout its lifespan will remind you of the occasion for which it was planted

If I were to select one feature or early colonial gardens which is particularly situated for today, I would choose the kitchen garden. This was a utilitarian garden then, providing food for the table and a supply of herbs for the numerous home remedies used for minor ailments.

The kitchen garden was usually laid out in a formal geometric pattern, with walks dividing the area into beds for easy maintenance and access It was located close to the house for convenience. It was enclosed by a fence to keep out meandering livestock and also to provide shelter for early and tender plants.

A well laid out kitchen garden is just as valuable today as it was in colonial times and it makes an attractive addition to the landscape. Choose an area which has full sun and good drainage. Enclose it with some kind of fence. This can be as simple or elaborate as you like, depending on the general style of the surrounding area.

Divide the garden into beds with walks. These may be some kind of brick or stone, but they don't have to be. The beds should be a minimum of three feet wide to a maximum of six feet. Length will depend on the size of the garden. The beds should be raised and surrounded by an edging of wood or brick. Mulching them will greatly reduce maintenance

Herbs, flowers and even dwarf fruit trees can be planted in the outside beds. The inside bed or beds are devoted to vegetables. Properly laid out, this kind of garden is an attractive addition to the landscape. It has a permanent framework that gives it year-round interest. It is truly a garden to be proud of, and one which can yield a great deal of pleasure over the years.

Plans for laying out a small kitchen garden, as well as a fact sheet on growing herbs, are available by writing the Delaware Cooperative Extension Service, Mail Room, Agricultural Hall, University of Delaware, Newark, DE 19711

Braising Poultry

To braise whole poultry preheat oven to 450 degrees F for young birds 325 degrees for more mature ones Season and brush ready to cook poultry with butter and other fat Place poultry on a rack in a roaster or heavy pan and cover tightly Poultry is done when leg joints move easily and flesh on legs is soft and pliable To brown uncover for the last thirty minutes of cooking

Inspect fields

Sustained crop yields are a primary goal of conservation planning states Karl Hellerick, Soil Conservation Service Fields that have erosion or have excessive water do not give top yields Last month, as well as last year, storms caused extensive erosion and water ponding problems for Lebanon County landusers

Hellerick recommends that landusers tour their properties to see the damages

Drainageways that have become gullies need to have sod reestablished. Sod waterways with subsurface drainage is one alternative for this excess water disposal problem.

Conservation planning considers the goals and the soil resources Hellerick states Each landuser needs to look around his property whether it be a lot, shopping center, or farm and see what his conservation needs are

Malnutrition

Severe malnutrition can lower the body's defense enough so that death can result from common illnesses Such malnutrition isn't common in the United States but in developing countries small children are badly damaged by kwashiorkor inadequate protein and marasmus an sufficient food of any kind

TOP BUTTERFAT HERD IN CHESTER COUNTY FEEDS BROWN'S . . .

CONGRATULATIONS . . .

JEFFERSON D. YODER, Elverson RD1, for winning the 1975 Chester Co.

DHIA High Herd Butterfat Award

54 COWS • 719 LBS. FAT • 18,286 LBS. MILK

ROCKY SIDE PERFORMER FLASHIE (VG-87)
3-0 2X 305 18,311 4.0% 731

HERD RECORD:

Mr. Yoder's herd average of 18,286 pounds of milk and 719 pounds of butterfat has set a new ROCKY-SIDE herd high for both milk and butterfat production. During the 1975 DHIA year, 22 ROCKY-SIDE cows completed lactations exceeding 20,000 pounds of milk with the high cow producing 29,009 pounds. Seven of these same cows produced over 1,000 pounds of butterfat with the high cow producing 1,293 pounds At the 1975 herd classification, 4 cows scored Excellent, 13 Very Good, 27 Good Plus and 10 Good.

FEEDING PROGRAM:

Mr. Yoder feeds his milking cows 35 pounds of corn silage, all the hay (mixed legume-grass) they can eat and BROWN'S 16 ROYAL on a 3 to 1 basis. Dry cows are fed mixed hay free choice plus 8 pounds of grain. No corn silage is fed to the dry cows.

We are proud of our customers' fine cows, skilled management and achievements. Records such as Mr. Yoder's are a source of pride to us. We are pleased with the part that BROWN'S FEEDS and SERVICES had in helping to attain these records. We shall continue to strive in 1976 to give farmers the best quality feed and nutritional service possible.

Charolais breed growing

HOUSTON, Tex - Registrations of Charolais cattle continued at a strong level through 1975, with breeders receiving new certificates on 78,150 animals, states Dr J. W Gossett, executive vice president of the breed registry, American - International Charolais Assn.

"This strong number of new certificates issued is particularly gratifying in view of past market conditions which held much pressure against the seedstock producer as well as the beef industry as a whole," he said.

Especially significant is the number of transfers issued, which totalled 45,180 animals, substantiating the breed's continued growth. Also, the association gained 735 new active breeder members during the year.

The junior arm of the association, American - International Junior Charolais Foundation, Inc., received 259 new members, all under the age of 21 years.

The association's Charolais Herd Improvement Program, a computerized records-keeping system, had 85,188 animals enrolled from 1,041 herds at the close of the year.

Texas continued to lead all states in the numbers of cattle registered or recorded with the association, with 199,785 head. Other leading states are: Missouri, 55,942; Florida, 43,894; Oklahoma, 37,466; Kansas, 34,411; Kentucky, 31,534; Louisiana, 30,536; Arkansas, 28,605; South Dakota, 28,233; and Nebraska, 25,011.

NORTHCO NOW OFFERS PROVEN MANAGEMENT ASSISTANCE

Dr. George Wetherill

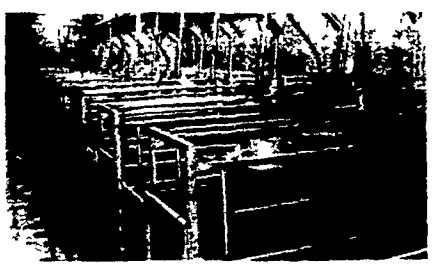
Dr. George Wetherill is a successful manager of a 300-sow Northco complex. His 1973 production records show these results from 644 litters.

- 19.99 pigs weaned per sow
- 9.31 pigs weaned per litter
- 2.15 litters per sow

Dr. Wetherill has joined the Northco team as a Swine Management Consultant. His management expertise, backed by his knowledge as a veterinarian are now available to help make your Northco operation more profitable than even before. Ask us how Dr. Wetherill can help you with swine management.

NORTHCO HOG SYSTEMS

Properly managed Northco systems produce top quality hogs profitably with a minimum of labor. All components of a Northco confinement system are designed to deliver maximum returns on the investment you put into swine production.



Farrowing

Northco Farrowing systems provide complete control over sow and litter. All crates are ruggedly constructed to deliver years of service. Special pig brooders target "zone heat" into the little pig area.

Finishing

Feed delivery is automatic yet the amount for each pen can be regulated separately Pen partitions are sturdy and designed to aid in cleanliness Northco's ventilation system draws fresh air from sidewall intakes, while exhausting warm humid air through roof exhaust ventilation units.

INDIVIDUAL COMPONENTS

Superior design and engineering quality can be found in each Northco equipment component Available separately

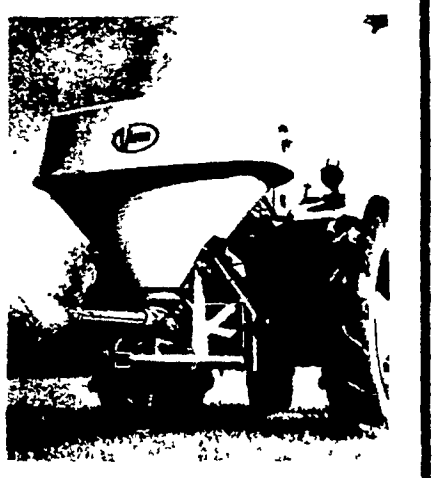
Vicon fertilizer spreader

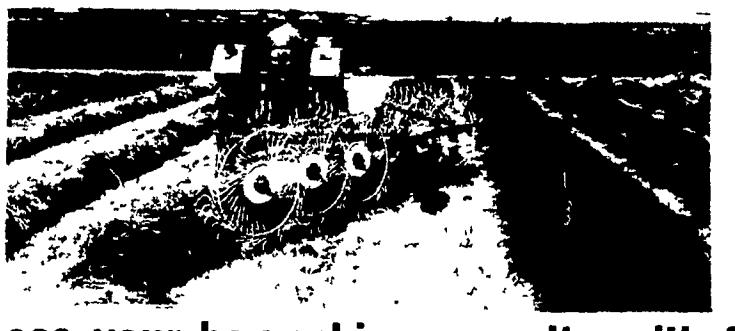
The most accurate fertilizer spreader you can buy



The Vicon Spreader uses an exclusive fast-action spout moving back and forth at 540 times per minute to give even, rectangular coverage instead of the usual circular pattern.
That means increased profit because you get uniform fertilizer coverage, resulting in better stands and higher yields

Give the Vicon fertilizer spreader a try. It costs no more than others. But it's better.

Vicon new sprintmaster



Increase your hay raking capacity with faster, more complete raking plus gentler hay handling.

The new Vicon Sprintmaster finger-wheel rake, in addition to superior hay handling capabilities, is exceptionally adaptable to rough terrain And, the New Sprintmaster is more useful in short crops and rakes wider swaths at higher speeds

Vicon the better idea from Holland

Lebanon Co. agent visiting South America

Editor's Note: The following report was prepared by Newton Bair, a former York County dairyman and now Lebanon County Extension Agent. It is one of a series of reports from Mr. Bair which LANCASTER FARMING will be publishing while he is getting a glimpse of agriculture in other parts of the world.

By NEWTON BAIR

While Henry Kissinger's visit to South America dominated the headlines the past three weeks, a group of Central Pennsylvanians were also filling the role of Good Will Ambassadors in five South American countries. I was lucky enough to be among the People - To - People agricultural delegation which visited Panama, Peru, Paraguay, Argentina and Brazil.

We met with U.S. Embassy personnel, Agricultural Ministers, and Cooperative and Farm Organization leaders and we were welcomed on the farms and in the homes of all types of farm people in each of the five countries we visited. Here are some of my personal impressions of the lands, the people, and the agriculture of South America.

Panama

Panama is the only place in the world where the sun rises over the Pacific Ocean and sets over the Atlantic. The Canal Zone, 10 miles wide and 50 miles long, runs from the Atlantic side eastward to the Gulf of Panama, which is on the Pacific coast. The United States has only 27 years left on a 99 year lease and already there is some resentment toward our presence, although the Panamanians realize that they need the economic stimulus of United States management of the Canal. They have very little commercial agriculture - all of the farms we visited are subsistence-type farms.

By our standard, farming in these small subsistence farms is very primitive but the people seem to be well fed and fairly content. Many adobe shacks in the country have a TV antenna on the roof and an old Ford parked in front.

Peru

We got our first view of the peaks of the Andes as we flew over the equator at sunrise, about 6:10 a.m. on February 7th. It's pretty hard to imagine that people live and even do some farming on the steep slopes of many of the andean peaks. The city of Cuzco, at 11,000 feet above sea level, is heavily populated by poor but picturesque Indians, descendents of the once proud Inca's who were humiliated and slaughtered By the Spanish conquistadors. For centuries they have worked as laborers on the fertile valley farms owned by wealthy people of European descent, and many are subsisting on unbelievably steep hillside gardens on the mountain peaks around Cuzco. Peru has started a land reform program by sub-dividing the large, productive farms and giving smaller parcels of land to the laborers, mostly Indians. The result has been catastrophic since the small landowners have no incentive to produce any more than they need themselves. Farm production has dropped while the population continues to rise at an astronomical rate even though infant mortality among the Indians is nearly 50 percent.

Lima, the capital city, has four million people, which is over one fourth of the population of Peru. It was for many years the gateway to South America for the Spanish explorers.

Peru's agricultural potential is limited except along the Pacific coastal plain. The central portion is slashed by the Andes Mountains and the eastern part is mostly tropical jungle. The United States Agency for International Development (AID) is setting up a program of technical aid to assist Peruvians to become self-sufficient in agriculture. James Stone, the United States AID coordinator in Peru was our dinner guest in Lima.

The coastal plain soils of Peru are rich in nutrients but production is limited by only four inches of rainfall per year. Under irrigation, fabulous corn crops are produced - using hybrids that require 180 days to mature.

We visited the Hacienda Ceres, a good Holstein herd owned by Jose Risso who is improving his herd with A.I. service imported from Atlantic Breeders Co-op in Lancaster. There are only a few herds of the caliber of this one in all of Peru - most of the cattle we saw are scrubby, underfed, and parasite infested.

Paraguay

Paraguay is a rather poor nation, landlocked in the center of the Continent. The only navigable outlet is by way of the Parana River, through Argentina. Large areas of the country are swampy and unproductive. Eastern Paraguay seems to be fairly productive, but needs a lot of technical help. Again, we are offering them assistance through the US AID program. An AID technician, Don Waugh from Madison, Wisconsin, went with us to visit a cooperating farmer near Asuncion.

Paraguay has an Extension Service and our People-To-People group received the red carpet treatment from the head of the Servicio De Extension' Agricola Granideria. As a representative of the Pennsylvania Agricultural Extension Service, I was honored by the presentation of a small flag symbolic of Paraguay's 4-C youth clubs, similar to our 4-H clubs.

Later we visited the farm of a prominent 4-C leader and met some youth club members, an Extension Home Economist, and the local County Agent. The farmer milked about 50 cows and peddled the milk daily, door-to-door in the nearby town. His principal crops were corn, manioc (a root crop), sugar cane, soybeans, some peanuts, and Pangola grass for forage. Alfalfa can be grown, but the soil is acid and needs lime. Fertilizer is used very sparingly and is quite expensive.

While in Asuncion, the capital of Paraguay, the People-To-People group visited the U.S. Embassy and were personally greeted by the United States Ambassador to Paraguay, George Landaw. He briefed us on the political and cultural background of the Paraguayan nation. Although they hold elections every five years, there is only one strong candidate, General Stroessuer, who has been in power since 1954.

Paraguay exports some tea, hides, and wood products but must import many necessities such as foodstuffs, machinery and fuel.

A colony of Mennonite and Amish farmers has been established in central Paraguay. We didn't have time to visit them but on the flight from La Paz, Bolivia, we met a group of Amish people from Lancaster and surrounding counties who were on a pilgrimage to visit their relatives in Paraguay. An unusual but very pleasant encounter in a small, small world.

Paraguay's National Institute of Agronomy receives technical and research assistance from the University of Kansas, financed by U.S. AID. They are working to develop better forage crops from alfalfa, buffalo grass, Paspalum and Pangola. The institute has many pieces of modern farm equipment but these are rarely seen on the farms. Most farmers still use a small horse as their principal source of power, and we saw many ox carts on the road and some oxen pulling plows and cultivators in the fields.

Like most of the smaller South American nations, Paraguay is a land of extreme contrasts, where squatter's shacks can be seen nestled between fine homes. Education is the stumbling block - an educated person can command an excellent income, while the illiterate nearly starve.

Soil management tips presented

By DIETER KRIEG

MORGANTOWN — To some, working with soil and plants isn't much different from working with cows or hogs. Many of the same principles apply. A healthy plant, for example, will resist disease — just as a healthy animal withstands ailments. Anyone who has ever milked a cow knows that the teats have to be squeezed right in order to obtain the milk. And so it is with the soil. It has to be managed right, so that plants can be fed right and provided with a good "home."

That, in a nut shell, is what Don Schriefer, spokesman for the Advanced Ag program, told a gathering of farmers here earlier this year who are either minimum tillage farmers or are giving that concept some consideration.

Schriefer pointed out that the plant is the only thing on Earth which produces food — everything else consumes — and he stressed the need for proper care. "Some of the things we're doing in agriculture are absolutely atrocious," the Illinois soil and plant specialist said. The "Dust Bowl," for example, came about as a result of unwise soil management. "If you want productive soil, then treat it right physically — have a proper system, choose the right chemicals and balance them to eliminate limiting factors," he advised. "If it's right physically and chemically, then it'll be right biologically," Schriefer observed.

Advanced Ag is a program which puts its emphasis on proper soil management, and as far as they're concerned, the plow has no place in it. In fact Schriefer went so far as to state: "The sooner the plow goes, the healthier agriculture is going to get. The plow is going fast, although there are still a lot of our people who are using it." The reason Advanced Ag and similar organizations oppose plowing is that the practice eliminates the benefits of decaying field trash, and cuts down on capillary water action.

In trying to make his point, the agronomist referred back to animal interpretations — noting how important it is for a baby calf to receive colostrum, and how some baby pigs turn into runts due to lack of proper nutrition. Schriefer drew similarities here and then went on to liken the soil to a cow's rumen. "Both depend heavily on bacteriology," he explained.

Worms, in Schriefer's lecture, were called "little torque amplifiers" which make a lot of things happen. "But just because you have a lot of worms in your fields doesn't mean you have it all," he cautioned jokingly. It takes more than that. Bacteria are essential to keep the soil loose and ventilated and also for decay of field trash.

The soil specialist, who has spent years advocating advanced soil technologies all over the country and claims to win significant numbers of converts every year, explained a number of recommended practices during a program held here at the Fire Hall which lasted more than three hours. The nicest thing he had to say about plowing is that "it is one of the most pleasant things about farming — farmers look forward to it and like it — the soil looks nice after plowing. Chisel plowing, on the other hand, does not look nice — but according to Advanced Ag, it's a good, solid soil management practice if it's done properly.

Depth and chisel spacings are two of the more important considerations. What's done with the soil after chiseling is also important — whether it's further work with the soil directly, or seeding it with a cover crop.

Defining minimum tillage, Schriefer coupled it with the phrase: "meeting proper soil management." It's good, in other words, as long as soil and plant requirements are satisfied properly. "But, if the idea is to do nothing, then the soil is abused," he added.

One Chester County small grains and corn farmer who is positively sold on the Advanced Ag concept is Wilfred Mast. Soon to be entering his third full year in the program, Mast first learned about Advanced Ag at the Agriculture Department in Harrisburg. He had been attracted to a meeting in March, 1974, by a post card mailed to him which claimed that a man named C. J. Fenzau was 25 years ahead in farming. Impressed by Fenzau's speech, Mast went home to study his notes and apply the "new technology." With two harvests of Advanced Ag managed crops behind him, Mast now says he's impressed with the results and A.A. has very definitely helped my farming program." He and his two sons farm 260 acres of prime Chester County farmland near Elverson. According to him, approximately a dozen farmers near here use the Advanced Ag program, which has now spread to 20 states and Canada. Mast describes it as being primarily an educational service, and points out that they're not in the business of competing with fertilizer companies. But they do offer and provide trace minerals if needed which would not be available elsewhere, he added.

Schriefer, a former ag teacher and graduate of Illinois University, is head of Advanced Ag Associates' eastern division and works out of DeMotte, Ind. His company analyzes soil samples and offers management tips. A full explanation of the program encompasses 10 major soil management areas. The cost of a composite soil sample is $40.00 which works out to about 60 cents to $1.25 per acre, depending on soil differences. In addition, the complete program involves an annual consultation and educational fee which varies from $1.00 to $1.50 per acre, depending on the size of the operation. Expensive?

Advanced Ag answers with an emphatic "No!" They claim it's the lowest priced service of its kind and add that the complete program costs less than "one trip custom application to apply fertilizer or chemicals." Mast agrees enthusiastically, saying that his experiences have proven to him that soil nutrients can be balanced properly — resulting in better crops, bigger yields, fewer diseases, and less insect problems. "The more the soil is out of balance, the more insect problems you'll have," he warned in an interview at his farm.

Changing to the AAA program has meant changing some management procedures as well as acquiring new equipment, Mast pointed out. Last year, for example, he used only one-third of the normally recommended amount of herbicides while cultivating to make up for it. He uses a Lilliston rolling cultivator, hitched up with nitrogen applicators to take care of that job at the same time.

As Mast and Advanced Ag technicians see it, the 11 primary reasons for tilling the soil are: 1. manage residue, 2. direct decay, 3. prepare seed bed, 4. improve weed control, 5. aeration, 6. hilling, 7. water management, 8. root extension, 9. biological support, 10. chemical support, and 11. material application. That's a long string of reasons to be tilling the soil which might lead one to think the more the better, but not so if Advanced Ag suggestions are followed. The key is not how much or how often, but simply "how." Whatever is done should be done scientifically and properly. Desirable physical properties (lack of lumps and clods) in conjunction with properly balanced soil components and nutrients is of utmost importance for achieving optimum plant growth which in turn leads to good animal production and better human health.

Schriefer challenges farmers to believe that high crop yields are as much influenced by tillage practices as chemical applications. He and his firm believe that "more yield is lost due to mis-management of tillage rather than mismanagement of chemistry. "A tillage system must be custom designed to fit the soil situation of a particular farm or area. Regardless of the soil situation, the principles remain constant and only the ways and means will vary." He states:

"We believe a proper tillage program must begin in the fall to lay the foundation for reaching the maximum productive capacity for a given operation. The fall tillage program must satisfy the following objective:

To position the soil in ridges with crop residues

South American agriculture

[Continued from Page 57]

Argentina

The vast Pampas region of Argentina has the potential to produce several times its present volume of farm produce. We spent several days around the city of Venadotuerto, right in the heart of the Pampas region. One of our visits was to the 3000 hectare (7400 acre) Estancia (ranch) called "Las Molles." Imagine a perfectly flat farm with topsoil three to four feet deep, that is three miles wide and 3½ miles long! The farm employs 23 workers, many of whom are the very colorful "Gauchos" with their broad sombreros, baggy pantaloons, high boots, and silver-spangled belt which holds a long knife and a bolero, which is a short rope with a ball on each end used to snare runaway calves. This ranch featured a beef breeding herd of about 2000 head of cows plus another 2000 feeder cattle of all ages. Argentine beef is not grass fed as we have supposed, but may be said to be range fed, which means they are grown and fattened on a variety of green crops including native grasses, alfalfa, sorghums, weeping lovegrass, and even corn which is pastured in the pre-dough stage. The beef we had in Argentina was some of the best I've ever eaten. They like to serve steak twice a day - in fact, steak is considered a "convenience" meal just like we might serve hamburger.

Cash crops grown in the Pampas region include corn, soybeans, sunflowers and grain sorghum. There was a widespread drought over the entire Pampas this summer, (October to April in the Southern Hemisphere) resulting in only 60 percent of a normal corn crop.

The cash grain farmers have no price incentive to encourage them to use fertilizer or lime. The average pH is 5 5, so they could benefit by using lime but they claim that there is no economic advantage to use lime, phosphorus or potash on field crops. The only element used in quantity is nitrogen.

There is a lot of grumbling and discontent among farmers and farm leaders concerning the Peronist government. Leadership is ineffective and extremely corrupt and agriculturists in Argentina claim openly that any kind of government would be better than the one they have - even a benevolent dictator if need be. Agriculture is Argentina's major industry but has not been recognized by the Peronist regime. My observation is that, given favorable incentives to make an honest Peso, Argentine agriculture could give United States farmers some competition worth worrying about.

We think we have inflation here in the USA. Well, Argentina has it to an extent we haven't dreamed of yet. During the few days we spent in Argentina, the value of the Peso varied from 240 to 270 for one United States dollar. We could buy many Argentine products such as leather goods (handbags, shoes) for one-third to one-fifth their cost here.

Argentinians were very friendly to us and were anxious to have us understand their predicament. Argentina is a potentially very rich nation but will never realize their economic goals until they achieve a strong, staple government.

The state of Santa Fe has its own A.I. Bull Stud at Venado tuerto. They own sons of some of the most popular Holstein Sires in Canada and the United States. They are also using Brahma and Zebu sires for their resistance to the heat and insects. They import semen only as needed to produce the special matings for their own breeding stock.

Telephone service in the Pampas region is very bad and radio is unreliable at certain times. So carrier pigeons are used to send a message to the Bull Center when a cow is to be bred. Each farmer uses a coded leg band for identification and pigeons return to the Bull Center within two hours after release. They claim that it is the most reliable method of communication they have found to get the job done. The keeper of the pigeons at the A I. Bull Center told us that the only problem they have is that occasionally a hawk will capture a pigeon and the message is lost

Brazil

Brazil is a continent in itself, stretching over 3000 miles from north to south, and nearly as far from east to west. The population is largely centered around the great cities along the coast. Porto Alegre in the south is a vast, sprawling coastal city in the heart of picturesque, rolling and unbelievably steep hillside farms. We visited the grape growing area north of the city and toured a winery at Caxias Do Sul. The area was colonized nearly 200 years ago by Italians and Germans, who brought their skills along from Europe. They maintain many of their old traditional ways of life and were very proud to share their folklore - and their wines - with the visiting North Americans.

Our host for one day was Hans Weissheimer, a dairy farmer of German descent, who lives about 60 km (37 miles) north of Porto Alegre. He is up-grading a herd of Holsteins with bull semen imported from the USA. We saw some beautiful daughters of Astronaut, Ivanhoe Star and Gay Ideal. Hans has visited the United States and purchased cattle from several central Pennsylvania Holstein Breeders. One unfortunate Pennsylvania heifer failed to breed, so it was slaughtered and barbecued for our dinner!

When we arrived in Rio de Janeiro our group was delighted to learn that Henry Kissinger had also just arrived and was staying at the Rio-Sheraton Hotel where we were also staying Most of us saw him enter or leave the hotel lobby and some even shook hands with him. He took note of our People-To-People badge - hope he realized that we were also on a good will mission to South America.

There is very little agriculture around Rio - just spectacular mountains of solid granite jutting out of the rain-forest jungle. The city itself is a modern, sparkling jewel mounted in a setting of silvery lagoons and coastal inlets gouged out of granite by the sea. The jewel, however, is flawed by numerous shantytowns on the hills above the city. Thousands of people keep moving into the city from the hinterlands with no job, no money and no talent so they squat on the hills and live in filthy tin huts. Every great city has problems and this is Rio's greatest.

Our last stop in South America was the great, new city of Brazilia. Only 15 years old it was completely planned and built as the Capital of Brazil. It is a completely utilitarian metropolis with wide boulevards, many parks and functional but beautiful buildings, many of which were designed by architect Oscar Neimeyer. To encourage agricultura

Soil management

(Continued from Page 58)

properly incorporated The purpose of ridging is to

Increase surface area and warming potential of the soil,

Improve water management by avoiding the excessive water-logging experienced on flat land,

Improve and maintain proper air exchange,

Increase and maintain optimal biological decay and nutrient release,

Reduce erosion,

Minimize the hazards of spring weather,

Assure a properly fitted biologically active seedbed.

The production year begins in the fall with proper tillage, cover crops and soil amendments."

In carrying out their program, Schriefer pointed out that his firm has worked closely with implement dealers and influenced the design of some equipment to maxamize their efficiency in the AAA-recommended practices. Aside from speaking favorably of chisel plows and ridging devices, the soil specialist also encourages the use of offset discs. Mast has found the "Roterra" and a Glenco soil saver useful in his operation. He likes the ridging effect of the latter machine and claims the "Roterra" is good for leveling ridges and firming the soil without actually packing it. He leaves ridges on his soil over the winter months and incorporates rye as a cover crop. In the Spring he goes in as early as possible — when the crop is four to six inches tall — to work the rye into the soil with the Glenco device. The fields are left in that condition until corn planting time when he moves in with the "Roterra." Corn is planted right after that. This year, in fact, he plans to pull his corn planter right behind the "Roterra," and get it all done in one trip.

Fertilizer applications at the Mast farm are "just what Advanced Ag recommends," the Chester County farmer explained "One of the most important things available is the 'in row support solution' which is put on at planting time directly to the seed," he added It provides all early nutrients to a young plant just as colostrum does to a young calf, AAA advocates claim.

Mast is convinced the new tillage program is paying off for him and praises the program. "The biggest mistake farmers have made is applying N, P, and K without concern for bacteria in the soil nor the necessary trace minerals," he observed. His view on plowing falls in line with Fenzau and Schriefer's assessment: "it deactivates the deacy system. Corn yield checks taken at his farm last year by the Twin Valley FFA chapter indicated yields up to 193 bushels of shelled corn per acre at 15 per cent moisture," he said.

Hort club

The York County 4-H Horticulture Club met recently at the 4-H Center near Bair for the monthly meeting.

Bonnie Wire, President presided, the American and 4-H pledges were led by Steve Trostle respectfully. Megan Shaub presented a slide program of her trip to the Junior Horticulture Convention.

Members will travel to Penn State University for the Pennsylvania Junior Horticulture Convention, the club will also take a trip to Longwood Gardens in June. Meetings are held the first Friday in the month at the 4-H Center all 4-H members in the county having a flower or vegetable project are urged to attend.

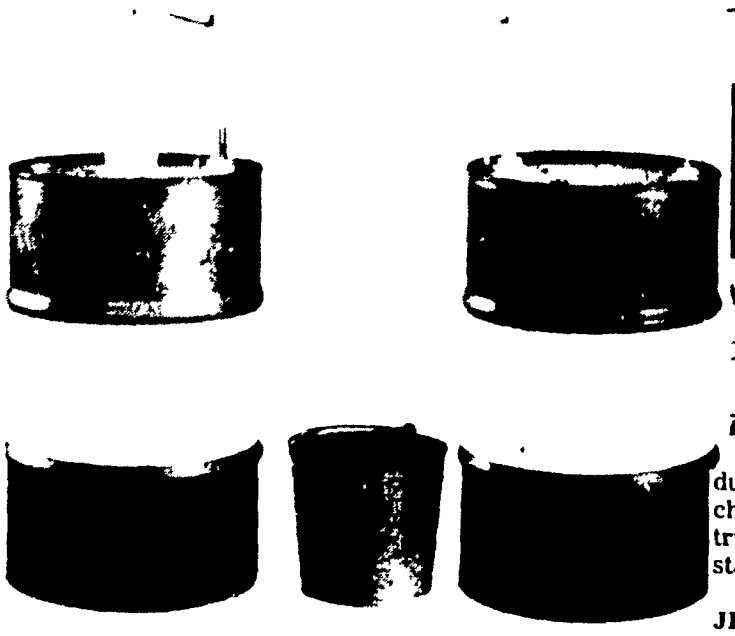
Stainless Steel Drum And Pail Pump

Corrosion-proof stainless steel offers a practical means of handling extremely hazardous liquids which ruin ordinary pumps.

The Potter Stainless Steel Drum Pump can handle nitric, phosphoric, sulfuric, and acetic acid, as well as most other commercial grade acids, alkalies, salts, organic substances, and all other liquids compatible with its 304 stainless steel construction. It provides an economical and practical alternative to the hazardous practice of handling corrosive liquids by gravity flow; in addition, valuable floor space is conserved. Fits all 55, 30, and 15 gallon drums; a polyethylene tube supplied with the pump reaches the drum bottom for complete draw-off. Optional adapters allow use with 5 gallon pails for the utmost inversatility.



More complete information on this product may be obtained from Potter Industries, 421 Dover Drive, Des Plaines, Illionis 60018

PICK-UP TRUCK HOIST ACCESSORY

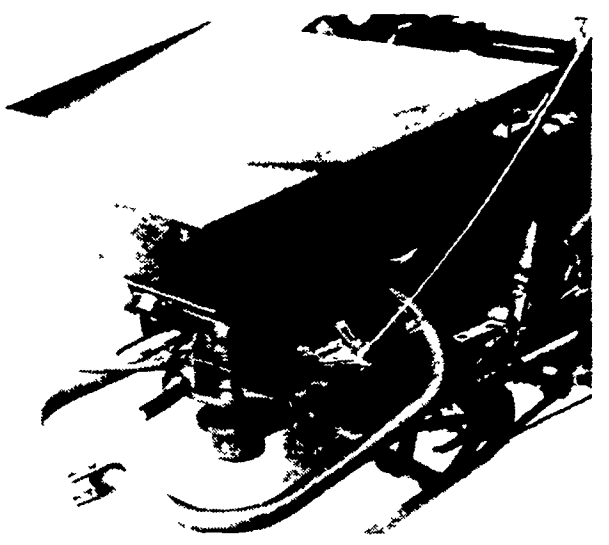
Truckers Supply, Inc. is now marketing nationally a new low-cost electric-hydraulic off-loading accessory for standard pickup trucks.

The patented JET HOIST attachment fits most one-half, three-quarters and one-ton pickups, giving them dump truck capability No change in body lines of the truck is required for installation

Available off-the-shelf, JET HOIST installation is accomplished readily by any competent welder. Detailed instructions are provided with each unit, or a JET HOIST distributor can provide installation for customers

Maintenance is simplified by grease fittings on all pivot points and the entire system is protected from overload damage by an automatic by-pass valve Vertical and horizontal stability is assured by a thoroughly tested, soundly engineered mounting assembly. A full factory warranty against defects in materials and workmanship is provided.

For further details on JET HOIST offloaders, contact Jimmy Adams, Marketing Director, Truckers Supply, Inc., 1000 N. First St., Garland, Texas 75040.



FERTILIZER BROADCASTER

Two cost-saving components have become standard on Lely (pronounced Lay'lee) Precision Broadcasters. One is a new spread pattern selector enabling you to perfectly center your spreading. The other is a new corrosion-resistant feedring for more accurate calibration. Both components are available for the thousands of Lely broadcasters currently in operation.

Lely broadcasters with the new feedring are virtually self-cleaning and maintenance-free. They will be capable of spreading to the side or rear and can be controlled remotely from the tractor seat.

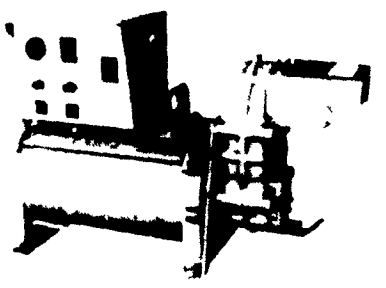
What's New



Generac's 20,000 Watt Electric Generating Unit Is Insurance Against Farm Losses.

When commercial electric power fails, simply attach your tractor to the 20 KW Generac PTO and start it. Instantly the threat of serious loss disappears as your bulk coolers, silo unloaders, feed lot waterers, incubators, water pumps, ventilators, freezers and other electrically operated machines are ready to perform their vital jobs.

The electric capacity of this rugged unit is 20,000 watts continuous duty with a surge capacity of 35,000 watts to handle brief motor-starting overloads. This unit provides enough single phase electric power, at 120-240 volts, to keep indespensable farm systems operating during a power failure, systems such as: automatic feeders, waterers, bulk and liquid manure handling equipment, ventilators, incubators, milking machines, bulk coolers, as well as lights, heating systems and freezers in the home.

Generac PTO alternators use the advanced "revolving field" principle for power generation. This principle was introduced to the portable electric power market by Generac. The high efficiencies obtained with this design in conjunction with close voltage regulation saves up to 25 percent on operating fuel when compared to competitive models under normal load conditions.

New, solid state voltage regulations, exclusive with Generac, controls the voltage to plus 2 percent at a constant frequency. This close regulation virtually eliminates the possibility of shortened light bulb life and overheated motor windings that could occur with units having poor voltage regulation. The close voltage regulation contributes greatly to reduce fuel consumption, making this unit one of the "fuel saver" line.

Generac alternators are simple and tough. The "advance design concept" has eliminated the need for high current AC slip rings, brushes and the DC commutator wear normally associated with generators.

A weather protecting canvas cover is shipped with each unit. Several other accessory items are available to increase the versatility of this unit. A two wheel trailer for full portability, transfer switching equipment which matches the PTO to the job, and a PTO shaft extension. This fully shielded shaft extension is adjustable from 43 to 66" for quick connect or disconnect to the tractor.

Further information is available by writing Generac Corporation, P.O. Box 8, Waukesha, Wisconsin 53186. Ask for Sales Bulletin 3-100.

xxx

Fight one more round. When your feet are so tired that you have to shuffle back to the center of the ring, fight one more round. When your arms are so tired that you can hardly lift your hands to come on guard, fight one more round. When your nose is bleeding and your eyes are black and you are so tired that you wish your opponent would crack you one on the jaw and put you to sleep, fight one more round - remembering that the man who always fights one more round is never whipped.

JAMES J. CORBETT

xxx

The man who gets ahead is the one who does more than is necessary - and keeps on doing it.

xxx

If you tell a man there are 300 billion stars in the universe, he'll believe you. But if you tell him a bench has just been painted, he has to touch it to be sure.

South American

(Continued from Page 58)

development in the vast Altiplano areas around Brazilia, the government offers generous plans to get the area settled and producing. The area from Central Brazil north probably will never offer serious competition with United States farm products. However, southcentral Brazil is well adopted to production of soybeans, which will give us some stiff competition in the world market.

South America - Overview

Cultural backwardness, illiteracy and political instability all help to cloud the horizon of the future for the smaller South American countries. An ever increasing birth rate is concentrating the population around the big cities. Agriculture is stymied by lack of incentive to produce at a profit. Land reform, as practiced in Peru for example, has placed farm production in the hands of primitive people whose culture insists only that they produce enough for their immediate need - no need to worry about tomorrow or about anyone else. The potential to produce agricultural products in South America is tremendous. To get it going they need first, more and better schools, some cultural reforms or better adaptation of present cultures, technical aid and, of course, stable governments that can provide economic incentives for farmers to produce.

Everywhere we went the people were friendly, seem to admire us but are a little envious of our position in the world. They ask only to be understood and loved as brothers in a small, small world.

LIFE on the farm

Editor's Note: The Life on the farm columns are written as entertainment for farmers and educational material for readers in town. More than half of the readers of this column are town and city residents.

By DIETER KRIEG

Bankers and other businessmen from town frequently marvel at the innovations and machinery they see at work on the farm While the degree of mechanization and automation varies from farm to farm, the age of whirring motors, electronics, photo-electric cells, and computers has caught up to quite a number of them

The latest in milking procedures, for example, involves a milking machine which can sense when a cow is milked out and the teat cups are automatically removed accordingly These same machines are also programmed to stimulate milk let-down at the beginning of the cycle and aid in the near complete removal of milk during the final stages The man running the equipment actually works more with switches, dials, and blinking lights than he does with the cow's udder

There are a number of ways by which cows are "cycled" through the milking process. Portable vacuum-operated milking machines are still popular but the more efficient and more dependable electrically controlled units are gaining ground rapidly. Glass or stainless steel pipelines are appearing on a lot of farms — thereby allowing the milk from the cow to pass directly to the cooler and eliminating the need of someone having to carry it to the milk house

Milking parlors have been around for about three decades, possibly longer These specially constructed and equipped facilities have cows "coming to the milker" rather than have the milker come to the cow It involves mechanically operated gates, spray nozzles for washing udders, ropes or dials to control feeding, and an automatic pipeline and milk machine cleaning system

The latest development in the "evolution" of milking systems is the "carousel " Cows step on to a slowly revolving platform to receive their feed and be milked Automatic washers clean and massage the udder, a system of remote-controlled gates assures orderly traffic patterns Surrounded by a maze of pipes carrying either milk, feed, water, or vacuum, each cow on the "carousel" completes one revolution before getting off again.

Who knows, with the advances that have taken place on the farm during the last 50 years (especially the last 20), maybe someday we'll have cows milked high atop a silo The rotating "carousel" milking parlor is, understand, architectually related to the fancy roof-top rotating restaurants which offer splendid panoramic views

I'm not predicting the development of such an extravagant milking facility My point is that farming today involves much more than a pitch fork and milking stool. Sophisticated equipment can be found on farms too, and staggering investments along with them

Angus photo contest starts

There's no better time than now for photographers to dust off their favorite cameras and start shooting for the top awards and cash prizes in the U S Bicentennial Angus Photo Contest. The contest is open to anyone that owns a camera, either professional or amateur, and a total of $2,500 will be awarded to the winning entries in the event

The general theme of the contest if the "Advantages of Angus Cattle" and the rules simply require that all entries have all or part of an Angus bulls, cow, steer or calf appearing in it. The imagination, creativity and originality is left to the individual. Categories will include both black and white and colored transparency divisions and the winning entries will be selected in both classes.

The entries will be judged separately in two classes and $400 will be awarded for first prize. There will be a $300 second, $200 third and $100 fourth. Additional entries that receive honorable mention by the panel of professional judges will receive $50. All winning entries and honorable mentions will become the property of the American Angus Association

Anyone wishing to enter may submit a previously taken or new black and white photograph or color transparency that has not been previously published in any magazine or newspaper. Do not send polaroid snapshots or colored prints. Entries open immediately and end September 1, 1976.

The entries in the black and white contest must be printed on 5x7 or larger paper, mounted and submitted with the negative. There is no limitation to the number of entries from any one individual but all winning entries and negatives will become the property of the American Angus Association. Color transparencies, not colored photographs, will be accepted in 35mm, 4x5, 5x7 or 8x10.

To enter, send your name and address to the Public Relations Department, American Angus Association, 3201 Frederick Blvd., St. Joseph, Missouri for complete rules and instructions. All entries require an official application blank from the American Angus Association.

To this date we have received only a few program booklets for the Farm Women Societies in Lancaster Farming's coverage area. We would certainly like to announce your meeting dates and activities but cannot do this without your help. Please be sending in either the booklets or program dates. Two months of 1976 will soon be gone and the activities are many for this year. We'll be looking forward to receiving your schedule of events! Send to: Women's Editor, Lancaster Farming, Box 266, Lititz, Pa. 17543.

Pollution tied to animal health

UNIVERSITY PARK - Veterinary scientists at Penn State University have developed a model system to study the effect of air pollutants on an animal's ability to produce antibodies needed to resist bacterial and viral infections.

Dr. Arlan Zarkower and associates have already found that substances such as ozone, sulfur dioxide, silica dust, and carbon dust can decrease the ability of animals to produce antibodies Harmful bacteria can be neutralized by such antibodies

Carrying out experiments with mice, the Penn State scientists have observed that even pure carbon - previously thought to be harmless - is capable of decreasing the animal's ability to produce antibodies

Silica dust, a known toxic component of a number of rock dusts and coal, had a much greater effect Silica was found capable of reducing antibody formation by 80 to 90 per cent. Mice in the experiments did not recover fully their ability to produce antibodies when tested 80 days after removal from a two week exposure to silica dust.

The College of Agriculture researchers are asking the question, "What effect do certain pollutants have on the ability of animals to resist infection?" The Penn Staters want to determine what concentrations and amounts of exposure time may affect the immune system

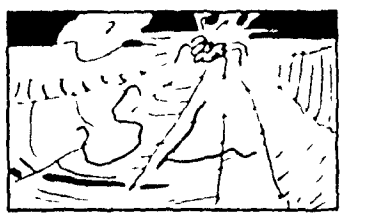
The effects of chemicals on livestock could become more serious due to increased numbers and concentrations of livestock on individual farms or feedlots, Dr. Zarkower observed He described the situation in a recent issue of "Science in Agriculture," the quarterly magazine of the Agricultural Experiment Station at Penn State.

In the early stages, the experiments found changes in the activity of cells which help to develop immune responses. The research has identified some of the cells and functions that may be damaged by the presence of toxic substances in the air. Such pollutants, Dr. Zarkower said, can damage cells which normally produce antibodies and create inumunity to disease.

Research elsewhere has shown that smoke, automobile exhausts, heavy metals, and a number of gases can affect the health and growth of animals. Some pollutants are products of industry. Other pollutants, such as ammonia, can be by-products of the animal's own wastes.

Dr. Zarkower said an increasing amount of attention is being given nationally to creation of "models" to determine the possible consequences of short and long-term inhalation of potentially toxic substances.

Effects of a variety of compounds are being studied as to their ability to damage tissues, induce cancer, destroy vegetation, and produce a variety of other changes affecting health and comfort.



Some people believe that if you find your initials in a spider's web you will be lucky forever!

Maryland fairs drawing crowds

ANNAPOLIS — Going to and taking an active part in agricultural fairs is a source of joy to a great many Marylanders, in fact over one million went to a county fair or the State Fair in 1975.

Figures on 1975 fair attendance and participation recently reported to State Agriculture Secretary Young D. Hance by R. Nelson Phelps, Executive Secretary of the Maryland State Fair Board, show that total attendance at 15 county fairs and the Maryland State Fair (Timonium) again were in excess of one million — 1,021,149 to be exact.

This was a slight decrease from attendance at fairs in 1974, which totaled 1,121,946, due mainly to heavy rains during the Labor Day weekend which washed out prime days for the Timonium event.

However, in reviewing the figures, Secretary Hance noted, "What impresses me most, is the number of people who actively participate in county fairs by entering exhibits or taking livestock to be judged. In 1975, some 40,263 Marylanders entered a total of 110,935 exhibits. This is real participation and shows that thousands of our citizens get a healthy degree of satisfaction out of entering their cow, chicken, horse or prize home canning product at a fair.

"Obviously our urban population enjoys going to fairs and entering them too, because the Montgomery County Fair staged at Gaithersburg is now the state's second largest fair in terms of attendance, second in the number of individuals entering, and first in the number of exhibits entered.

"The State Fair is first in attendance with 361,151, Montgomery is second with 225,000 and Frederick third with 91,000. Inividuals entering exhibits indicate Frederick first with 6,295, Montgomery second with 5,618 and Timonium third with 5,570. The rankings for the number of exhibits entered have Montgomery first with 16,722, Timonium second with 14,624, and Frederick third with 13,807.

"Actually fair attendance showed gains in 1975 whenever the weather permitted," Secretary Hance noted. "Six fairs (Calvert (8,500), Cecil (20,000), Charles (25,000), Garrett (52,000), Somerset (7,200) and Montgomery) showed gains last year, while four held their own (Hagerstown (55,000), Queen Annes (30,000), Howard (60,000) and Prince Georges (20,000). The six fairs showing declines, due mainly to rainy weather were Timonium, Anne Arundel (30,090), Frederick (91,000), Cumberland (21,548), St. Marys (23,160) and Wicomico's (9,500) Farm and Home Show.

"I would urge everyone, during these cold and housebound days of winter, to start thinking about fairs for 1976 and if they did not participate in 1975, to think seriously about having a wonderful experience by doing so in 1976" Mr. Hance concluded.

Insurance discussed

Ninety people attended the insurance committee seminar held recently by the Lebanon County Farmer's Association. Reporting to the board of directors at their monthly meeting, Swen Bomberger, Chairman of the organization, congratulated the insurance committee for the fine program which included talks on estate planning by local attorneys and bank consultants.

In other action, the directors decided to send a committee of local members to Washington to meet with Pa. representatives in Congress.

Bomberger explained that Chester Heim, legislative analyst for the Pa. Farmer's Association will be the speaker for the local spring meeting on March 19th. Tickets are available from the directors or by calling 1-865-5693.

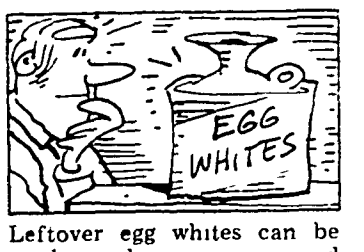
An electronic livestock scale manufactured by Senstek Limited of Saskatoon, Sask , Canada, is being marketed in Lancaster County by Frey Bros of Quarryville R2

The new device features

- Instant Digital Read-out
- Instant lbs -Kg Conversion
- 2000 or 3000 Pound Capacity (C2000 or C3000)
- Accurate to within ½ percent of Reading
- Lightweight, Portable Frame
- Shipping Weight Approximately 300 lbs.
- Powered by 4 Dry Cells - Portable Operation
- No Moving Parts (Solid State)
- No Pit or Concrete Base Required
- Feedlot or Pasture Weighing
- Adaptable to Fit any Chute

The Berks-Lehigh Pork Producers recently held their annual spring sale in Kutztown. The sale netted close to $11,000 with Ralph Zettlemoyer as auctioneer. Shown above are three of the producers who took part in the sale. They are (from left) Edward Oswald, Ed Rabenold and Terry Bennecoff.



Leftover egg whites can be used in cakes, meringues and souffles

'Sesame Street' goes rural

One of the first things city folks think of when they hear the word "Farm," is milking cows. For them, this activity typifies farm life. So, when some of the hosts of "Sesame Street" visit a ranch, one of them, Gordon (Roscoe Orman), gets a chance to milk a cow. He hesitates at first because, as he says: "I never saw a cow until we got a TV."

The popular series for preschoolers - the most widely viewed children's program on the air - is broadcast on the 256 stations of the Public Broadcasting Service and on commercial channels in areas not covered by PBS.

Gordon's efforts as well as those of the other hosts who take a week-long visit to a New Mexico ranch, are part of the programs for the seventh season of the educational TV program. The trip marks the first time Sesame Street has created segments outside the New York studio.

The human hosts along with Big Bird and Oscar the Grouch help Luis' (Emilio Delgado) family build a new house on their ranch near Taos. For a week, three generations of the real-life Romo family become Luis' "family," and in the process teach the others something about life on a ranch.

If the pipes in your house clank, you can install flexible rubber couplings on the radiator return pipes This dampens the vibrations before they enter a room, and may muffle them completely

INCREASE YIELDS $15.00 AN ACRE FOR 25¢

ORTHO ISOTOX® Seed Treater [F] is backed by the best kind of proof a corn seed-treater could have: over one hundred million successful corn acres All kinds of climate. All types of soil. All sorts of men doing the planting Yield increases run up to fifteen dollars an acre — from a product that costs about 25 cents to treat a 20,000 plant population-acre.

Certificates of Merit presented

MT ZION – Dairymen from Lebanon, southern Dauphin, and western Berks Counties were honored here recently at the annual District 3 meeting for Atlantic Breeders Cooperative for having high producing herds

All herds were at least 15 per cent above the state average for butterfat last year, while at least two-thirds of the cows in these herds are progeny of Atlantic sires The awards were presented by Edwin Sauder, Atlantic's Field Supervisor for this area

Receiving Certificates of Merit for having top Dairy Herd Improvement Association averages were: Lancaster Mennonite Hospital, Lebanon R5, Willow Maple Farm, Newmanstown R1; Mervin Horst, Newmanstown, Enos Leinbach, Myerstown R2, Marvin Meyer, Annville R2; Edwin Funck, Jonestown R1, David Brandt, Annville R1, Wernersville State Hospital, Wernersville, Muddy Creek Farm, Myerstown R1, Franklin Graybill, Hershey

Reports by District 3 Director Tom Williams of Middletown, Pa, and management representative Willis Ritchey, Service Manager, informed members that 1975 was a very successful business year for Atlantic The service program was up-dated with the entire area divided into 66 units and all farmer-members can now use WATS numbers to call toll-free for AI service Atlantic sires maintained their rating among the nation's best for transmitting profitable traits, Ritchey said

Members present voted for District representatives for the coming year Election results will be announced in the next issue of the Cooperative's monthly newsletter, since more than one meeting is held in most of Atlantic's 16 Districts.

ABC recently honored, left to right, David Brandt, Marvin Meyer, Edwin Funk, Franklin Graybill and Wernersville State Hospital.

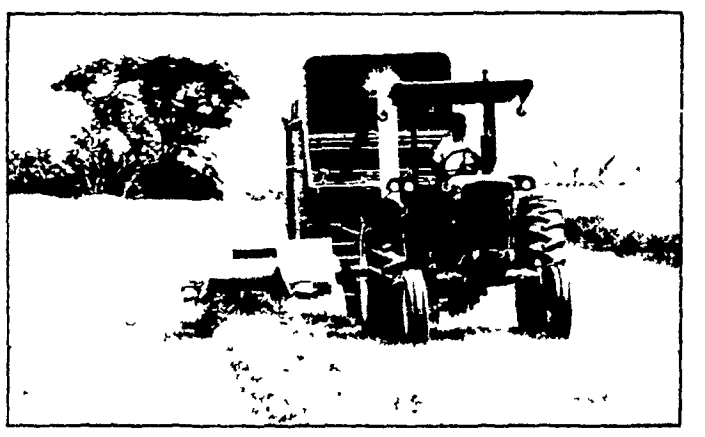
Buy Less Feed.

Use Beacon Silage Pre-Serv*

and get up to 30% more feeding value from your grass silage or haylage.



Now you can lock in the fresh cut feeding value and palatability of your succulent forage crops—even with moisture levels up to 65%

Beacon Silage Pre-Serv prevents heat build-up, controls oxidation and fermentation, and greatly reduces spoilage and shrinkage. Treated silage has less seepage, and saves handling time because there is less lumping and bridging in the silo. Get up to 30% more feeding value from every ton.

Discover the benefits also of Beacon Hay Pre-Serv* It permits you to harvest hay up to 26 hours earlier, allows cutting and storing hay with as much as 25% moisture; provides more feeding value than with untreated hay

Awards presented to Dutchmen FFA members

The Little Dutchmen FFA Chapter held their sixteenth Parent - Member on February 26th with 235 members, parents and guests in attendance. Jay Bomgardner, chapter president, served as toastmaster, and Mr. Lowell Morton, chapter adviser, presented several of the following awards.

PROFICIENCY AWARDS

Chapter Star Farmer - Jay Kreider; Star Greenhand - Beverly Cooke; Crop Production - Ellis Meyer; Livestock Production - Joseph Ellenberger; Poultry Production - Bryan Burkholder, Doreen Cooke; Placement in Ag. Production - Rick Kleinfelter; Agriculture Processing - Alan Hostetter; Sheep Production - James Dietrich; Agriculture Electrification - Reid Hoover; Home Improvement - Tom Landis; Wildlife Management - Douglas Buffenmeyer; Swine Production - Jay Bomgardner; Forestry - Debra Longenecker; Agriculture Mechanics - Samuel Heagy; Dairy Production - Jay Kreider; Soil and Water Management - Jay Kreider, Frank Early, Roy Kleinfelter.

COUNTY PROJECT BOOK CONTEST

Blue Ribbon winners: Donald Brandt; Jay Bomgardner; Roy Kleinfelter; James Dietrich; Chris McFeaters; Jeff Hostetter; Rick Kleinfelter; Steve Wamplwe.

Red ribbon winners: Bryan Burkholder; Reid Hoover; Sam Heagy; Frank Early; Jeff Hostetter; Ellis Meyer; Doug Buffenmeyer; Jim Wampler.

White ribbon winners: Jay Kreider; Alan Hostetter; Joe Ellenberger; Luke Heagy; Bruce Buffenmeyer; Doreen Cooke, Steve Wampler.

STATE PROJECT BOOK CONTEST GOLD MEDAL WINNERS

Jay Bomgardner; - Four enterprise farming program; Ellis Meyer - Field corn; Joe Ellenberger - Swine Fattening.

SILVER MEDAL WINNERS

Chris McFeaters - Dairy Beef; Bryan Burkholder - Farming program 2 enterprise; Steve Wampler - work experience.

BRONZE MEDAL WINNERS

Jeff Hostetter - Work experience; Donald Brandt - Farming program 2 enterprise; Reid Hoover - Farming program 2 enterprise.

CHAPTER LEADERSHIP & SCHOLARSHIP AWARD

Jay Bomgardner.

DEKALB AWARD

Jay Kreider.

AGRIBUSINESS AWARD

Rick Kleinfelter.

ANNVILLE-CLEONA KIWANIS CHAIN CALF

Ellis Meyer.

CHAPTER GILT

Bruce Brightbill

KEYSTONE FARMER PINS

Amy Jo Peters; Kenneth Pierce.

PARLIAMENTARY PROCEDURE AWARD (team)

Luke Heagy; Tom Fair; Kenneth Pierce; Jay Bomgardner; Sam Heagy; Reid Hoover; Jim Wampler; Bryan Burkholder; Alan Hostetter; Tom Landis.

The assistant officers presented the Honorary Chapter Degree to Mr. Victor Peters, Mr. William Pierce, and Mr. David Kruger.

Milk production problems studied

By DIETER KRIEG

CONWAY, Ark. — In 1968 a major U.S. feed company set up a 1900-cow dairy farm near here for the purpose of researching dairy management and feed programs under practical, commercial conditions which could be applicable to most any herd size in the country. They had a lot to learn and readily admit this fact.

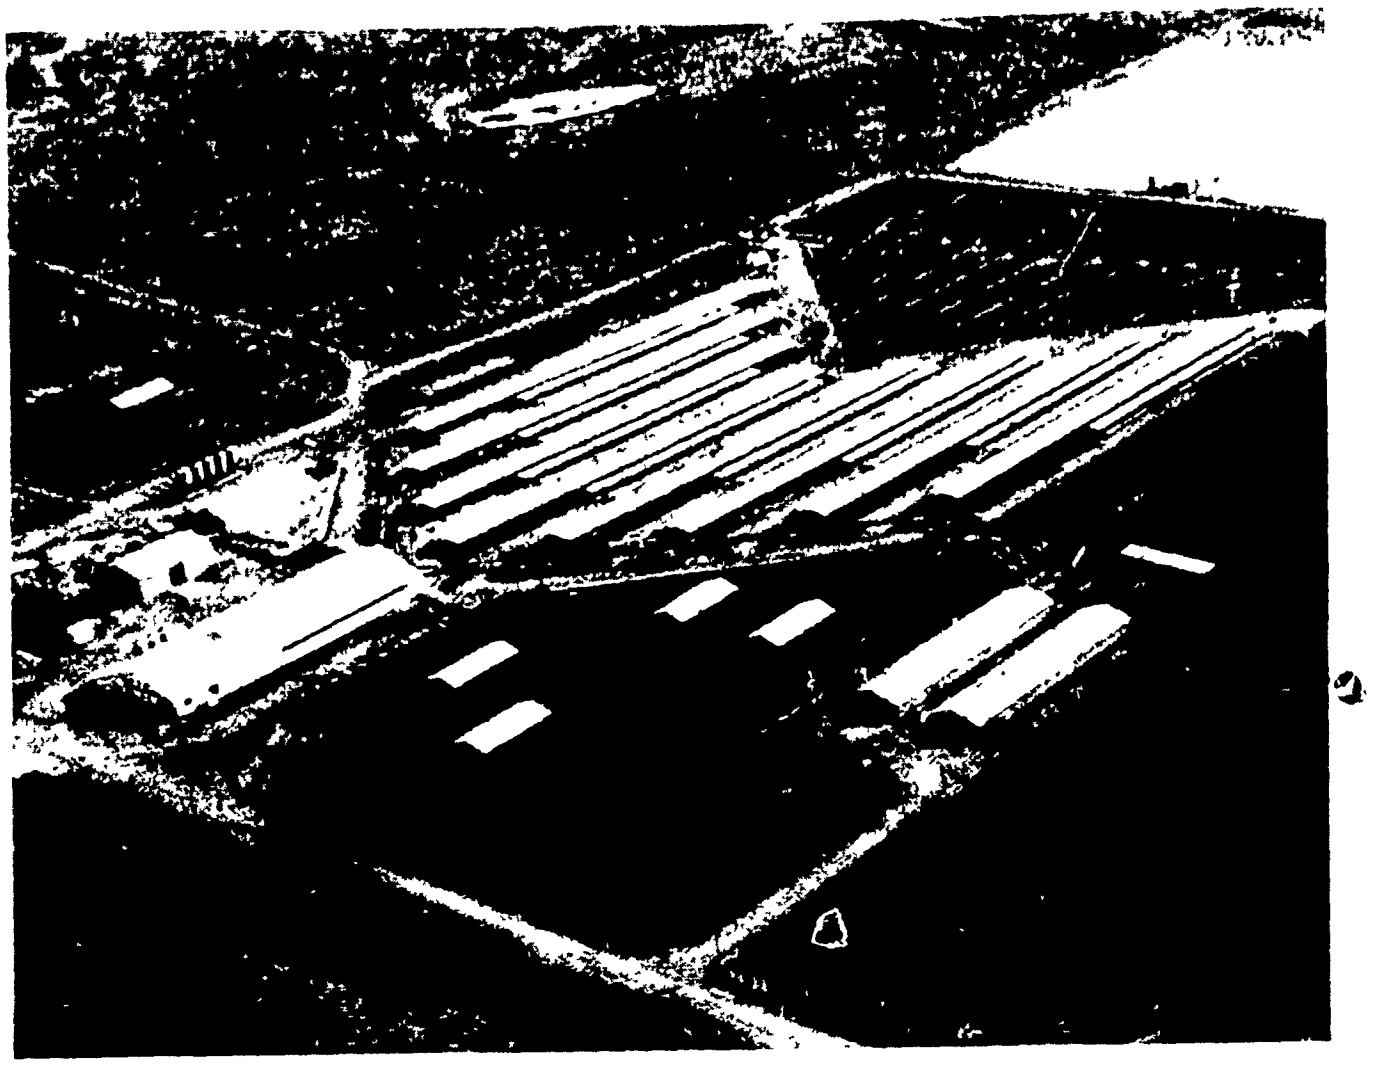
Encountering one problem after another — both natural and those due to miscalculated planning — the 802-acre research farm wasn't spared any of the difficulties normally associated with the dairy business.

Among other problems, "Arkavalley Farm," owned by the Ralston-Purina Company, encountered levels of breeding problems, retained placentas, and herd deaths which are considered to be abnormally high. According to Purina dairy research scientist, Dr. J. P. Everett, the farm was encountering not just individual health problems, but herd health problems — much of it due to a certain amount of inexperience for this type of an endeavor. He and his associates willingly confess that if they had to do things over again, they'd change no less than seven major criteria. Currently the research farm has six major plans aimed at trying to make dairying everywhere more efficient and profitable.

Located in a rather unproductive part of Arkansas about 45 miles north of Little Rock, it must be pointed out that the Purina dairy research farm has far lessgood land to work with than dairymen back home in Pennsylvania. The site was chosen at the time because of a marketing agreement which had been signed with a nearby food distributor. Furthermore, the area was short on milk and the paying price for milk was attractive.

In spite of a seemingly negative footing, "Arkavalley" is being managed to produce at a profit. In fact, Purina spokesmen insist that the farm must be commercially viable, otherwise their experiences and research findings would not be truly applicable to other dairy farms. With progress being made in all directions, and mistakes leading to improved management, the research farm attempts to

[Continued on Page 71]



"Arkavalley Farm," located in central Arkansas, is a dairy research farm with emphasis on management. Although operated on a large commercial scale, most findings from the dairy are generally believed to be applicable to most herd sizes. Shown in this panoramic view is the milking barn, left; with feed storage facilities and hospital barns off to the side. Eight open free-stall "barns" fan out from the rear of the milking and holding area. The smaller roof areas between those eight barns are over feed bunks. The entire area is flushed with 160,000 gallons of water per day. The long buildings in the right foreground are used for calf raising. A national dairy conference sponsored by Ralston-Purina was held here this week with approximately 1,000 visitors from all over the East and Midwest in attendance.

at large commercial dairy farm

(Continued from Page 70)

create something positive out of various negatives.

"The Arkavalley Dairy Farm was built and is operated as a management research dairy farm to enable the company and their employees to learn management inputs necessary to successfully operate a large dairy."

Cows at "Arkavalley Farm" wait in the holding area prior to walking into the automatic washing area and finally the parlor at the far end.

Approximately 1,900 head of grade Holsteins are kept at the 802-acre research farm.

Only about a third of the milking parlor is shown in this view. It has an 18-cow capacity and can handle 150 cows per hour. Milking the 1500 lactating cows takes 20 hours per day and is done in shifts. Men and women do the milking.

visitors are informed. A dairy conference was held here earlier this week which drew close to 1,000 dairymen from all over the eastern United States — including several dozen from Lancaster Farming's prime coverage area.

The major purpose of the research farm was to find answers to common dairy farm problems such as. 1. breeding, 2. retained placentas, 3 adequate roughage, 4 cow groupings, 5 low fat tests, 6 calf raising, and 7. personnel. Workable solutions are made available to dairymen, as are any other results of management and building experiments which have been tried. Aside from some product research, such as testing new feeds prior to marketing, the main areas of study concern:

1. Buildings and equipment and their most practical type and arrangement for these facilities.

2. Breeding, cow health and mastitis problems commonly associated with large dairies and some practical measures that can be taken to reduce them.

3. Practical feeding programs and equipment needed to feed large herds.

4. Adequate pollution control measures.

Asked at one point why such a large dairy operation was chosen as the basis for experiments and research, several spokesmen answered: "Large, medium and small dairy farms have many things in common, but large dairies have some unique problems, particularly large dairies where cows are held in close confinement. Findings from a large dairy would be more widely applicable than those from a small farm."

Stressing a need for practical research and service to commercial agriculture, the giant feeds

(Continued on Page 76)

Survey Results

A recent Food and Drug Administration survey found that shoppers were most concerned about making sure families got the nourishment they needed Ranked almost as high was the concern for saving money on food prices Those shoppers who know more about nutrition realized it was possible to follow a budget and still eat nutritionally Of the shoppers polled, eight per cent said they would prefer having nutrition labeling, rather than recipes on product packages

Berks Co. farmers complete leadership training classes

By JUDY MITCHELL
Berks Correspondent

LEESPORT - Members of the Berks County Farmers Association completed the second of two, full-day leadership training sessions held over a one-week period at the Berks County Agricultural Center. The four-phase training program, presented by Mr Eugene G McDowell, Regional Organizational Director for the Pennsylvania Farmers' Association, with the assistance of Sandra Strohmier, Agricultural Employers Specialist, was offered to some 24 County Association directors, committee chairmen and their wives. Leadership instruction was provided through slides, group discussions, case history studies, and a film, "The Strangest Secret," written and recorded by Earl Nightengale, renowned expert in the field of people-motivation.

Unit I of the program presented an independent look at the Farm Bureau, the parent organization of all State and County Farmers Associations. It also provided background information on the Pennsylvania Association which began 25 years ago. The basic concepts of the Bureau and how the Farmers Association differs from other farm organizations were emphasized. The Farmers Association, it was pointed out, is first of all a family organization. It is a voluntary, dues supported, non - governmental organization which provides economic services for its members. The Bureau is a decentralized structure by state and county associations operated solely by their volunteer members, involved, not in protest, but in fostering programs which will benefit the farmer. The Association includes all crop growers and is working with all levels of government in many areas of farming. The challenges of the future for the Farmers Association as presented are, to involve youth in Association efforts, to keep adequately financed, to keep members politically active, to establish better public relations, to base market values on supply and demand, and to take its rightful place in world trade

The second unit of the program was "The Farm Bureau Basic Unit - The County." This phase covered the organization hierarchy from the national to the county level. At the national level the AFBF boasts 2½ million families and the total in the State of Pennsylvania this year is expected to reach the twenty-thousand mark with 935 in Berks County alone. Statistics indicate that 4 out of every 5 farmers who belong to any farm organization belong to the Farmers Association, and the County organization is determined to be the basic unit of the Association because that is where the people live and work and that is where their major problems arise

The training session was concluded with the third and fourth phases of the overall program. The third units, entitled "Boards and Committees delt with the responsibilities, limits, functions and procedures for Association leaders. Nightengale's film, although not specifically designed for agriculture, presented a study in motivation and self improvement which made up the fourth unit of study, "The Effective Leader."

According to the Regional Organizational Director of the Pennsylvania Farmers Association, "getting people to do the job voluntarily is really the definition of leadership." Programs similar to the one just held in Berks County have been taking place throughout the State this winter to improve leadership ability within the Farmers Association so that the Association might better serve its members. McDowell stated that the purpose of the Farmers Association is to help farmers analyze and solve their problems.

Home Safety

In spite of all the hoopla over the movie 'Jaws' only 50 people are killed by sharks annually in United States waters According to the National Safety Council, average annual deaths caused by accidents around the home total 25,000 More people are killed every day in home accidents—70—than in an entire year by sharks

Pyramids

Quetzalcoatl is the world's largest pyramid Located some 60 miles southeast of Mexico City, it's the largest monument ever constructed It is 177 feet tall with a base area of nearly 45 acres Its total volume has been estimated at 4 3 million cubic yards Most of the world's pyramids were built between the 6th and 12th centuries

Cornwall Furnace tract may see expansion

HARRISBURG — Sen Clarence F Manbeck, R-48, sponsored a bill deeding a tract of land adjoining the historic Cornwall Furnace from Bethlehem Mines Corporation to the Pennsylvania Historical and Museum Commission

The tract, almost three acres, includes three buildings that date back to the mid 1800s

"Not only will the land be a useful addition to the Cornwall Furnace Historical site, but the buildings have historical and architectural significance to certain aspects of life on the ironmaster's estate of which Cornwall Furnace was a part," Manbeck said

"They can be used for meeting facilities and storage, both of which are needed at the site," Manbeck said

Cornwall Furnace is the oldest fully preserved example of the early iron furnaces in Pennsylvania and prior to the development of the ore banks of the Lake Superior deposits, its ore banks were the most productive in the nation. It was an important source of cannon and shot for the Continental Army during the Revolutionary War

The furnace was started in 1742 and continued in operation until 1883, and the State Historical and Museum Commission calls the mine from which ore was taken for the furnace "the oldest operated continuously in the New World It has been mined for more than two centuries and is still the greatest iron ore deposit east of Lake Superior"

"I think Bethlehem Mines Corporation should be commended for deeding this property to the Historical and Museum Commission," Manbeck said. "It assures further preservation of this most important historical site and will enable development necessary to make the site available to the greatest number of visitors"

The furnace has been preserved much as it looked when it ceased operations in 1883

Horsemanship clinic slated

4-H horse project members and other 4-H members are invited to attend a horsemanship clinic to be held Saturday, March 13 According to Dr C M Reitnour, extension equine specialist at the University of Delaware, the clinic will be held at Stamper's Arabian Farm, Cool Spring, Delaware Cool Spring is located near Lewes on Route 18, approximately six miles east of Georgetown, says Reitnour

The clinic begins at 9 00 a.m., says Reitnour and will be held rain or shine because an indoor arena will be used. The Friday evening before the clinic will feature a lecture at 8·00. Lecturer and instructor for the clinic will be Ward Studebaker, instructor of undergraduate horse science courses and horse herdsman at Penn State. Studebaker has won numerous horsemanship honors nationally, according to Reitnour.

Each 4-H participant is asked to bring his horse or pony as though he were exhibiting in a horsemanship class. Instruction on leads, change of speeds, changing gaits, contact with a bit, overall general horsemanship and judging will be offered

Non-4-H members are invited to observe, says Reitnour. There will be a $2.00 registration fee for participants, and $1.00 fee for spectators There will be refreshments available

For more information, contact Dr. C. M Reitnour at 738-2523 or call your county 4-H agent in Newark, Dover, or Georgetown

Freeway Wreck

One guy claims he's in a wreck on the freeway every morning on the way to work Remember a witless driver is one who has blown his mind Since there's so many pumpkin-heads driving these days, it's like Halloween year-round on the nation's highways

Getting Caught

Most ironic crimes these days are getting caught at what everybody else is getting away with It's like keeping a bank balance—or, walking a tightrope Cigarette smoking isn't only dangerous to your health—it also destroys your pocketbook

ATTENTION DAIRYMEN

You can improve PALATABILITY, increase PRODUCTION and PROFIT by adding ALFA—ZYME to your dairy feed It takes only 100 pounds of ALFA—ZYME added to a ton of feed to obtain these results Since ALFA—ZYME costs about the same as 100 pounds of feed, it does not cost any more to feed ALFA—ZYME than if you do not feed it

Lately, have you been reading or hearing about the importance of enzymes, lactic acids, yeast, in feeding rations? ALFA—ZYME is the result of growing these beneficial organisms How? Through a natural fermentation process, these organisms, grow and multiply millions of times They are added to the feed in a **live and active state.** No period of activation is required before they go to work, as in dry preparations. These very beneficial organisms keep the digestive system working at top efficiency at all times

Manheim Young Farmers hold annual banquet

Among award winners at the Manheim Young Farmers Banquet held earlier this month were, left to right: Jim Kettering, Dale Nolt, Darryl Bollinger, Earl Landis, and Ray Shenk.

The outstanding young farm couple for 1976 of the Manheim Young Farmers, Mr. and Mrs. Ben Nolt of Manheim R1, pose with three young men who won First Year Farmer Awards. They are, left to right, rear: Martin Moyer, Darryl Bollinger, and Jim Musser.

MOUNT JOY — At the recent annual banquet of the Manheim Young Farmers, Ben Nolt, Manheim R1, was named as the club's outstanding young farmer for 1976 and six were recognized for outstanding individual achievement.

The organization's double-winner, Darryl Bollinger, Manheim R7, was the year's corn grain champion and one of three to receive the First Year Farmer Award. The other two were Marlin Moyer, Manheim R2, and James Musser, Mount Joy. The corn silage award went to Dale Nolt, Manheim R1, while James Kettering, Manheim R1 had his hay judged as tops. Earl Landis, Manheim R7, was the DHIA winner for the year.

Ray Shenk of Shenk's Farm Service, Lititz, was named the Honorary Manheim Young Farmer for 1975. Others cited for their support to the organization were: Agway Petroleum Co., Atlantic Breeders Cooperative, Roy Brubaker Farm Equipment, Chemgro Fertilizer Co., Fulton National Bank, Heisey's Farm Service, N. G. Hershey and Son, Hoffman's Seeds, Lancaster Level-Flo Inc., Manheim National Bank, Bob Miller P.A.G. Seeds, Organic Plant Food Co., Pennfield Feed Corporation, Penn-Jersey Harvestore, Inc., Pioneer Seed Co., P. L. Rohrer, Royster Fertilizer Co., Shotzberger's Equipment, and Trojan Seed Co.

Held at Hostetter's Dining Hall, here, the banquet drew more than 100 members and guests. Officers for the MYF are: Russell Adamire, Jr., president; Jim Kettering, vice president; Dale Nolt, secretary; Jay Boll, treasurer; and Marlin Boyer, public relations. The advisor is Glenn Spangler of the Manheim vo-ag dept.

NEW IDEA'S FERTILIZER SPREADERS

For Orchards or Vineyards

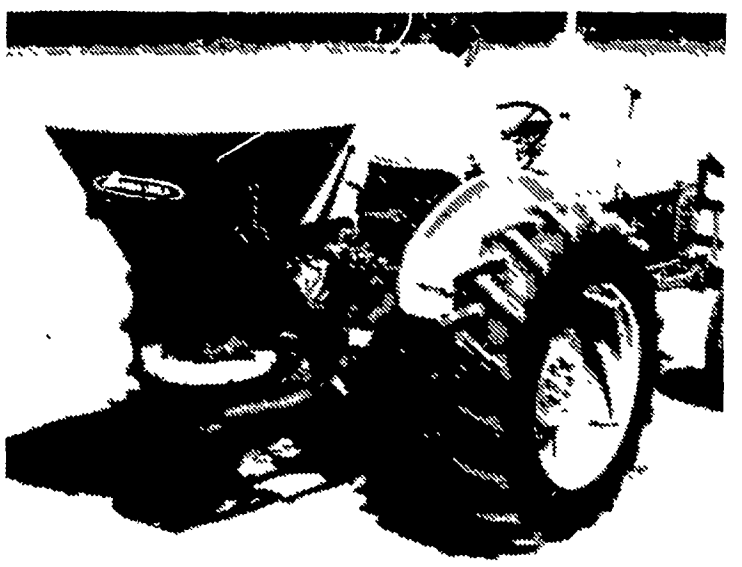
Optional attachments to New Idea's twin-spinner spreader makes it ideal for use in orchards or in vineyards. A side spread attachment eliminates the center portion of the spread pattern for use in orchards. The curtain attachment, adjustable from five to six feet, limits the spread width in vineyards. Without attachments you can spread up to 30-feet wide, or spread just to one side or the other by shutting off one spinner. It's quick and easy for one man to attach or remove from most Category I and II 3-point hitch tractors.

Band Spread or Broadcast

The optional band spreading attachment fits quickly and easily over New Idea's twin-spinner units, and adjusts from 28-inches to 68-inches for side dressing a wide variety of row spacings. Without the attachment, you can broadcast up to 30-feet wide, or just to one side or the other. With other attachments you can spread to both sides with none in the middle (for orchards), or limit the spread to five or six feet (for vineyards). Easy to attach or remove from most Category I and II 3-point hitch tractors, New Idea's Twin-Spinner Spreader is ideal for pelleted, granular and semi-granular fertilizer and most seeds. Built-in tow plate pulls a harrow while spreading or trails a wagon of fertilizer to the field.

AVCO NEW IDEA FARM EQUIPMENT

We make your job a little easier



ECONOMICAL SPREADING... up to 36 ft. wide!

New Idea's economical single spinner spreader-seeder does a fine job, fast and accurately. Its six adjustable steel blades on a single spinner give an effective spread width up to 36 feet. It has a 690 lbs. (8.5 bu.) hopper capacity, and is easy to mount on 3-point tractors. Can be cleaned easily, too. Come in and see it.

Dairy research

(Continued from Page 71)

manufacturer claims that its commitment is to assist the producer in increasing his profitability and return on investment. "Purina has no interest in becoming a milk producer," visitors were told

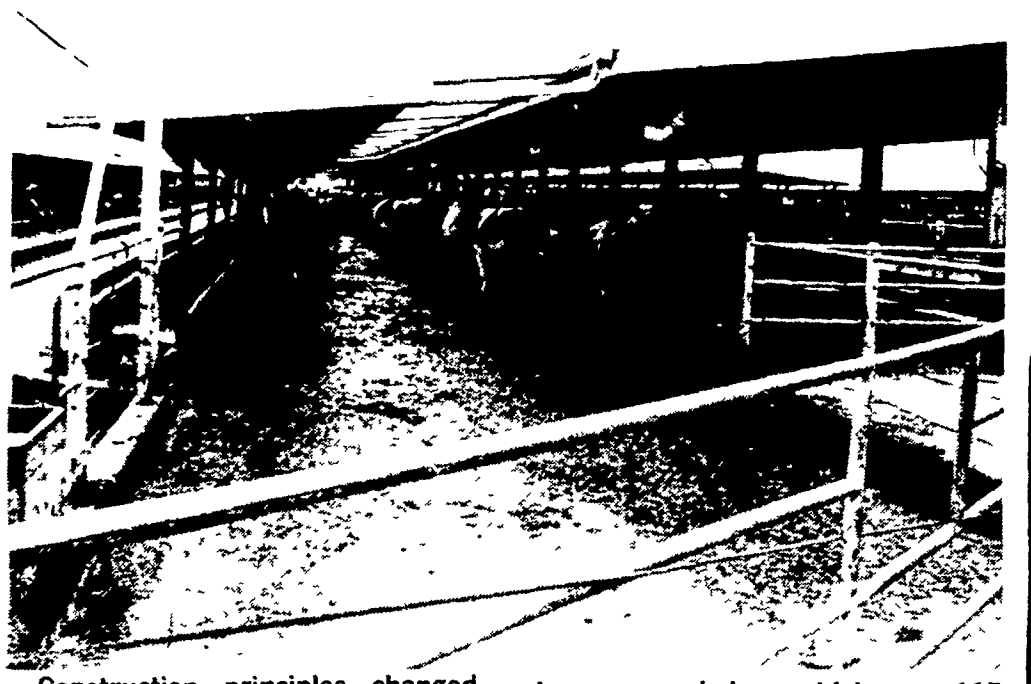
So, with management research as a motive, and self-sufficiency of the farm as a requirement, the "Arkavalley Dairy Farm" was born. Since a majority of problems and managerial ideas at this Arkansas farm are similar or even identical to those encountered in Pa., or anywhere else, the management here believes that their work is of potential benefit to dairymen everywhere.

Nearly 1900 grade Holsteins, of which 1500 are milking, are kept at the farm which sprawls out across 802 acres of rolling, rough-looking land. As seen during this time of year, the virgin land in this part of Arkansas appears to support little more than trees (mostly conifers) and a variety of bushes, brush, and grasses. Corn cannot be grown in the area due to rapid drainage of the shallow clay and shale soil. Farming, in general, is all but void and what was seen here in this part of the country in no way measures up to what farmers in Pennsylvania and neighboring areas are accustomed to. In short, "Arkavalley" is something of a man-made oasis within a section of comparatively unproductive land. The only crop which is being grown here by "Arkavalley" with reasonable success is sorghum. All of it goes for silage.

The milking strings kept at the research farm are kept in eight lots which fan out from the center of the operation. It features a three-pit milking parlor with an 18-cow capacity and 150-cows-per-hour efficiency. Dry cows roam on hilly range land across the road and receive their feed along

(Continued on Page 77)

Manure from these litter alleys is flushed into a lagoon from where it is pumped out onto the farm's 400 acres of crop land. A unique research discovery is that solids within the manure can be separated, dried, and then used over again as bedding in the free stalls. Farm managers report the practice is successful.



Construction principles changed dramatically after researchers learned that the older style barns did not allow adequate cooling and ventilation. Note the fans mounted underneath the roof covering the free stalls. Summer temperatures have been recorded as high as 115 degrees and managers at the farm consider it to be their number one problem. Construction which favors free movement of air is heavily favored.

Dairy research

[Continued from Page 76]

a concreted 700-foot long fence-line feed strip The feed distribution method for all cows is by way of trucks equipped with self-unloading mixing boxes.

Except for the milking area and a hospital barn, housing facilities are of the pole and roof variety, with no walls on any side. Manure is flushed from concreted surfaces at least once a day with a phenomenal 150,000 gallons of water.

Calves are raised in an environmentally controlled barn featuring individual stalls on a heavy steel mesh. A series of fans and ventilation tubes circulate fresh air and maintain even temperatures. Once these young replacements have been given their start in life, they are sold to other farmers under contract that "Arkavalley" will buy them back at pre-determined prices.

At a question and answer session following a tour of the research farm, the management and researchers were asked to cite their main dairy production problems at "Arkavalley."

Without hesitation, the five panelists agreed that the intense summer heat was their number one concern. It reportedly cuts the cows' feed intake and hurts the reproductive cycle The latter, in itself, was the second most serious problem. A calving interval which stood at 13 3 months as of last Jan is significantly below some previous figures but further improvement is being sought The fact that neither hay nor corn can be raised on this soil was not cited as a "problem" but definitely as a disadvantage. It is likely that the management would not pick the same location again if they had to make that decision a second time.

There are other problems. That, from an editorial point of view, is good. Most, if not all farmers have problems and if this particular feed manufacturer is trying to find answers to them, then they must first have the problems to work with. Perhaps that is why managers here presented their conference in such a candid fashion. This part of Arkansas, for example, is not what dairymen from the Northeast or Midwest would call "pretty." It is not impressive in that sense, although the farm itself commands a definite amount of prestige. The farm is not a "show place" as such and some of the experiences here have been anything but enviable. Nevertheless, the operation is pretty much of an "open book" to visitors. At one time, for instance, a third of the cows here retained their placentas. Although nothing to be proud of, this statistic and several others which are equally poor, are pointed out to audiences. Some changes in construction and feeding have reduced that figure to 8.3 per cent. So it's not all bad; in fact much is exemplary.

Ten to 12-thousand tons of sorghum silage can be stored in this bunker silo which measures 300 feet long and 60 feet wide. It is one of three such structures (the other two are smaller) in use at "Arkavalley Farm," Ralston-Purina's dairy research center. The silage is loaded either with a front-end loader or automatic machines designed specifically for bunker silo unloading. The material in the foreground is brewers' grain, which is mixed with the silage in self-unloading truck boxes.

Visitors to "Arkavalley" study a pumping pit near the 4½-acre lagoon, (background) from which solids are removed for eventual use as bedding in free stalls. A pile of material is shown at left. It takes a month or more to cure it and still needs perfection, farm researchers reported.

Some problems normally associated with dairy herds, such as poor feet, misplaced abomasums, and ketosis are almost non-existent, although serious foot problems were "overwhelming" just a few years ago. Feeding programs and equipment have been altered to better fit the program. All in all, graphs and statistics point out significant improvements between 1969 when the first cows were milked here, and 1975.

Hot summer temperatures, as stated earlier, are the number one dairy production problem in this part of central Arkansas. "Arkavalley" has tried several methods to reduce the ill effects of heat, including airplane propellers, and a fine spray of water aimed at the cows while they stand by the feed bunks. When profit margins permit it, managers redesign the roofs and supporting structures. To further facilitate air movement and cooling, 160 fans have been installed under the roofs of the free stall areas where temperatures up to 115 degrees F. have been recorded. The weather continues to be a problem, although its effects are no longer as intense. Research into the matter continues.

Production per cow also increased over the years and the farm now reports a rolling herd average in excess of 14,000 pounds of milk per head. Higher goals are being aimed for but the

Feeding time at "Arkavalley Farm" is a matter of driving down the feed alleys or along fence lines with self-unloading forage boxes which mix a complete ration. Feed bunks and fence-line feed strips are featured at the research facility which is located on 802 acres of comparatively unproductive land in central Arkansas.

Once they've been loaded with sorghum silage and brewers grains, trucks move to the grain bins where the proper ration is added and automatically incorporated into the feed. Electronic scales on the box let the operator know when filling is complete.

Dairy research

(Continued from Page 77)

practicality of the operation is being kept in mind.

Sorghum silage, which was described as "poor forage" by two of the managers, is stored in three bunker silos, the largest of which is 60 feet wide, 300 feet long, and has a capacity of 10 to 12-thousand tons. Most of the crop is grown outside of the farm's own tillable 400 acres. Contract growers, managers found out, could provide the necessary feed so that attention at "Arkavalley" could be focused on dairy management entirely, rather than inclusive with field work. Those contract growers manage a total of approximately 1900 acres of sorghum fields — or roughly one acre per cow.

Sorghum silage is the bulk of the ration, and is, in fact, the only forage being offered at the present time. The top producing cows receive a ration containing about 61.7 per cent sorghum silage, 11.1 per cent brewers grains, and 27.2 per cent of Purina's Golden Milk Chow Special (18 per cent protein). During early years the herd was fed different amounts, and low fat tests were often encountered during the summer. A change in rations, and the addition of "buffer" compounds has allowed "Arkavalley" to maintain fat tests of 3.5 per cent or better even when heat and humidity reach summertime highs.

Loaded into self-unloading mix wagons equipped with scales, all but small amounts of a dairy feed are fed by way of these vehicles. They unload into either fence-line or conventional bunk feeders. One man feeds all of the milking cows — starting at 6 a.m. and finishing at 3 p.m. Top milking strings are fed six times per day, others four times. A small amount of a pelleted feed is used in the parlor to give cows an extra incentive to come in. Molasses blocks had been tried prior to that with little success, the management reported.

In order to give its employees incentive, "Arkavalley Farm" has five bonus schedules based on production, extra cows milked, mastitis reductions, longevity of cows, and length of service of the employee. The average salary with bonuses is somewhere between $850 and $900 per month, a farm manager said. Time off is rotational with the average work week adding up to 5½ days even though no one ever really works a half day.

The heifer replacement program is a key part in the research farm's goal for developing its own source of good milk cows. The average "milking" life of a dairy cow here is only three years, so the program calls for improvement starting right at the time calves are born. A calf mortality rate of 10 per cent in a herd of this size is considered to be "workable" according to specialists at the farm. That rate has been achieved.

The calf barn is normally filled with around 300 calves. The feeding of colostrum,

... seven years of ...on, Dr. Everett says: ...ve no major herd ...s at present due to ... of a well-defined ...alth program. In... of mastitis, milk ketosis, displaced ...sums and enteritis ...y low." Built for $2... "Arkavalley Farm" ...rding a return on investment of 10 to 15 per cent, the visitors were told.

Before the field day adjourned, Dr. Everett noted some of the more significant problems encountered in earlier years and summarized their solutions. The low fat tests, for example, were overcome by adding sodium bicarbonate and magnesium oxide to the feed ration. Fiber intake levels were corrected by altering roughage intake, mixing brewers grains into the sorghum silage and changing some other feeds.

The serious foot problems encountered in previous years were corrected by redesigning free stalls, better maintenance of stalls, and fewer concreted surfaces. The high temperatures during the summer had also added to foot problems, researchers determined.

Careful feeding and cleanliness in and around corrals have brought down the number of retained placenta cases. Reproductive efficiency has been improved through cooler temperatures. Record systems and heat detection methods, as well as the routine herd health programs have been upgraded.

And that's the way it was, and is, at "Arkavalley."

Calves are kept in individual stalls such as these which are built over heavy steel mesh. The buildings for calves are environmentally controlled and feature both tube and conventional fan ventilation.

Another view of the interior of the calf barn, shows individual feeding facilities. Up to 300 calves can be raised here at one time.

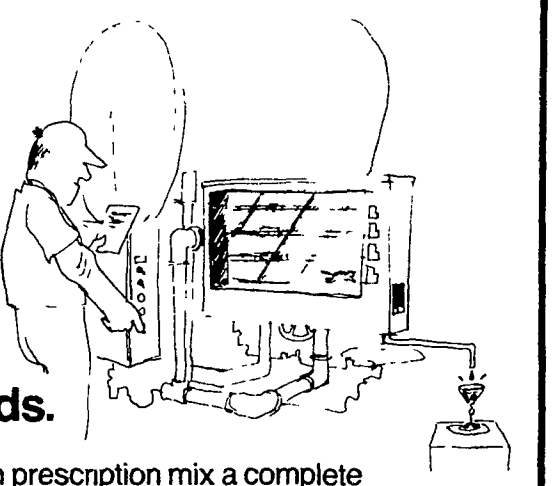
SLF®



It's the way we give each field the exact liquid fertilizer it needs.

With the SLF system, we can prescription mix a complete liquid fertilizer that matches the needs of each individual field and crop.

It means you don't have to settle for what's available. Or what's possible. Because with SLF and Arcadian® liquid, the possibilities are endless.

Allied Chemical designed SLF to deliver the same analysis in every drop. In liquid application equipment that fertilizes accurately and uniformly from start to finish over every acre.

It's made with POLY-N®, the phosphate source that increases the availability of nutrients to the crop. This helps explain why SLF mixed liquid fertilizers have proven more profitable than dry bulk blends in recent field trial comparisons.

Let us prescription mix a complete liquid fertilizer based on a complete soil analysis, and show you how profitable fertilizing the SLF way can be.

AGWAY

STRETCH YOUR FERTILIZER DOLLAR,

LIME BEFORE PLANTING CORN

If the pH level of your corn ground is below 6.0, lime now to a pH of 7.0.

Liming now can provide you with a two-fold return: some of the lime you plow down or disc in will partially benefit this year's corn crop; and by next year, its full effect will be available to help your fertilizer dollar go even further.

If you aren't sure of the pH level of your corn ground, bring a representative sample of soil (one-pint size) to one of the Agway locations listed below. Your Agway man will be able to provide you with a quick analysis of the pH and recommend the amount of lime you'll need.

Then, talk to him about spreading a fertilizer extender-lime-on corn ground this spring.

Lime in the fall . . .
but if the pH is low

Mont. Co. sheep club installs new officers

LANSDALE — During a recent meeting of the Green Pastures 4-H Sheep Club of Montgomery County, held near here at the 4-H Center, an election of officers was held with the following results:

President: Bob Greenwood; vice president: Tim Nice; recording secretary: Terry Pappy; corresponding secretary: Julie Miller; and treasurer: Kit Jones. The new officers in turn lit a candle and repeated the responsibilities of the office entrusted to them for the year.

New business was a discussion by members for some ideas for planned programs for the coming year. A meeting of the new officers and three other club members met at the home of Warren Landis, Souderton, club leader, February 11th, to take these suggestions and plan the programs.

Nancy Haentze showed the group tee shirts that are for sale by the Pennsylvania Junior Hampshire Sheep Association. The profits from the sales go to the association. Varied sizes are available and orders can be taken.

Members were urged to try to get others interested in raising sheep and then join the 4-H sheep club.

Building awards given

Agway, Inc., of Syracuse, New York, and Thomsen Construction and Supply Company of Lawrence, Michigan, were awarded Building of the Year honors by the National Frame Builders Association at the Farm Builder Show in New Orleans.

Agway won in the commercial building category with the construction of Hafner's Red Barn Country Store in Liverpool, New York.

In the agricultural building category, Thomsen Construction and Supply Company built a 40'-9" x 108' x 8' swine nursery building for Jim Gilmore Enterprises Farm in Richmond, Michigan.

U. of Delaware asks for new agriculture building

Two years ago, University of Delaware agricultural sciences administrators were asking themselves whether there would be a college of agriculture in a few years. Today, says Dr. William E. McDaniel, Dean of the College of Agricultural Sciences, there has been a 500 percent growth increase in agricultural students, and the 1962 building is bursting at the seams.

McDaniel says the University is currently requesting $6 million from the state legislature for a new building to house the College of Agricultural Sciences, the Delaware Cooperative Extension Service, and the Delaware Agricultural Experiment Station, now all crowded into one-half of the area they need. Plans are to construct a new building adjacent to the existing one with an additional 44,000 square feet of usable office, classroom, and laboratory space.

Golden Fleece 4-H meets

The club recently held it's monthly meeting at the home of Mrs. Menhennett with Mr. Tom Mitchell as the guest.

Mr. Mitchell is from the Chester County Agricultural Extension office. He is new at the job and will be working with 4-H clubs.

At the meeting, Macy Myers gave a mini-report on "The Wool." Macy also brought in different objects having to do with wool, the manufacturing, and the products made from wool. Fred Keys also gave a mini-report on "The Cleanliness of the Pen."

A tail docking demonstration was given by David Lytle. Billy MacCauley also gave a docking demonstration using a different method.

Sixteen members were present at this meeting.

So What

Happiness is that peculiar sensation you get when you're too busy to be miserable. Politicians wonder how the Lord can run the world without appointing commitees A race horse is the only animal that can take several thousand people for a ride at one time

Among the dairymen receiving certificates of merit at Atlantic Breeders' recent annual District 4 meeting were, left to right: Henry Kettering, Clyde Martin, Donald Eby, Donna Akers, Earl Landis, Arthur Wenger, and Nathan Stoltzfus.

18 dairymen recognized

Eighteen Northern Lancaster County dairymen were honored for having high producing herds this past year at the twelfth annual District 4 meeting for Atlantic Breeders Cooperative members held February 24 at the Blue Ball Fire Hall.

Receiving Certificates of Merit for having top Dairy Herd Improvement Association were: Henry Kettering, Lititz R3; Earl N. Landis, Manheim R7; Donald Eby, Gordonville R1; Clyde Martin, East Earl R1; Christian Zook, Gap R2; David L. Landis, Colebrook Rd., Lancaster; Titus Stoner, Bowman Rd., Landisville; Arthur Wenger, Manheim R6; Harry Aungst, Marietta R1; Nathan E. Stoltzfus, Gap R2; Albert Fry, Manheim R7; Hiram Aungst, Elizabethtown R1; Ivan S. Stoltzfus, Honey Brook R1; Harold Shelly, Manheim R2; Harvey Heller, Willow Rd., Lancaster; Masonic Homes Farms, Elizabethtown; J. Wilmer Conrad, Newport Rd., Lititz; Alvin K. Bollinger, Lititz R4.

All herds were at least 15 per cent above the state average for butterfat last year, while at least two-thirds of the cows in these herds are progeny of Atlantic sires. The awards were presented by C. P. Brantley, Atlantic's Field Supervisor for this area.

Reports by District 4 Director Clyde Martin of East Earl, Pa., and management representative Willis Ritchey, Service Manager, informed members that 1975 was a very successful business year for Atlantic. The service program was up-dated with the entire area divided into 66 units and all farmer - members can now use WATS numbers to call toll-free for AI service. Atlantic sires maintained their rating among the nation's best for transmitting profitable traits, Ritchey said.

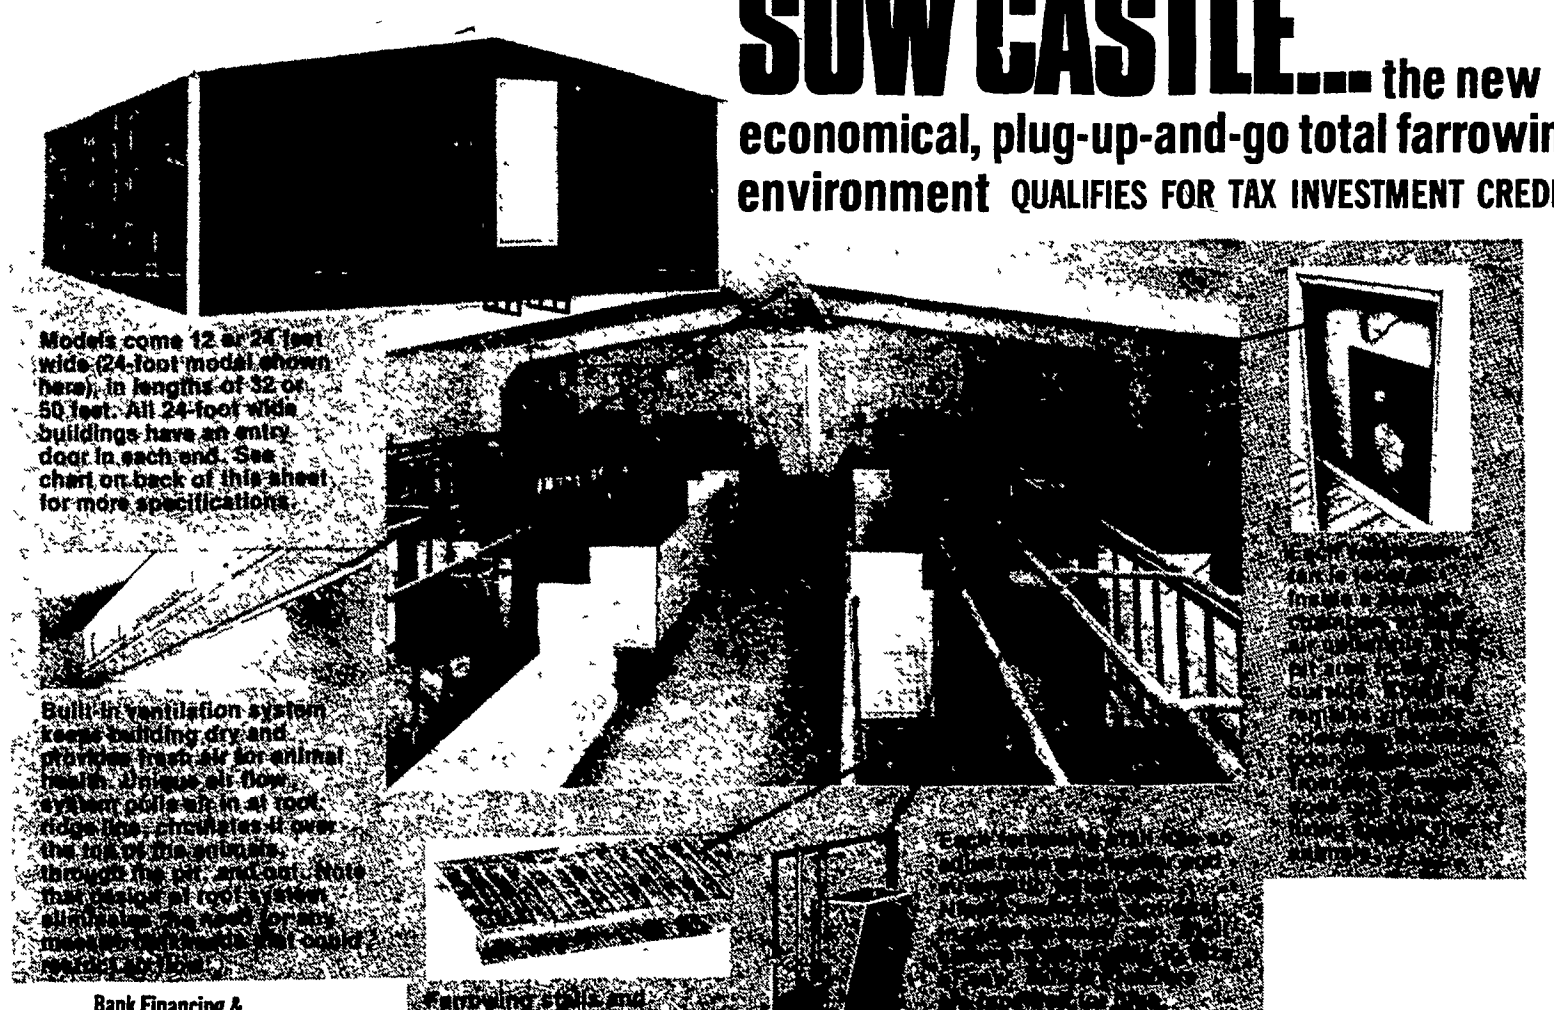
SOW CASTLE... the new economical, plug-up-and-go total farrowing environment QUALIFIES FOR TAX INVESTMENT CREDIT



Models come 12 or 24 feet wide (24-foot model shown here), in lengths of 32 or 50 feet. All 24-foot wide buildings have an entry door in each end. See chart on back of this sheet for more specifications.

Built-in ventilation system keeps building dry and provides fresh air for animal health. Unique air flow system pulls air in at roof ridge line, circulates it over the top of the animals, through the pit, and out. Note that design of roof system eliminates the need for any mechanical ventilation that could restrict air flow.

Bank Financing & Leasing Available

Tractor officers elected

The first meeting of the York County Central Tractor Club was held at the 4-H Center near Bair. The following officers were elected: President: Jack Parr, Vice-President: Tommy Welsh, Sec.: Kevin Laughman, Treas.: Paul Myers III, News Reporter: Jonathan Myers.

Leaders are Ronald Horn, Phil King, Rodney and Tim Eisenhart with meeting held every Thursday night.

TRY A CLASSIFIED AD!

Pa. hunters successful in deer-bear season

HUNTERS TOOK 71,986 BUCKS

Pennsylvania's deer hunters recorded their second largest buck harvest in history during the 1975-76 whitetail seasons, according to reports filed with the Game Commission.

Cards mailed in by successful hunters indicate 71,986 antlered deer were taken, while another 66,209 hunters in the state reported tagging antlerless deer. The total reported whitetail harvest was 138,915.

The 1974-75 figures were 70,689 antlered deer and 54,963 antlerless whitetails, for a total harvest of 125,652.

The 1975-76 antlerless harvest was the sixth largest on record, and the total harvest was the fifth highest since record-keeping began in 1915.

The most recent buck harvest was exceeded only in 1967, when the record 78,268 were reported tagged.

Of the thirteen largest buck harvests in the state's history, twelve have occurred in the last twelve years, and of the four antlered deer harvests which have exceeded 70,000, three have been recorded in the last three years.

Prior to the season, the Game Commission said that it hoped that hunters would harvest at least 65,000 bucks and a minimum of another 65,000 antlerless whitetails.

The one-day extension of the antlerless deer season on Saturday, December 20, was completely justified, reports show. Cards returned by successful hunters indicate 14,251 whitetails were taken on that day. Had there been no extension of the season, the antlerless harvest would have been only about 52,000, far short of the desired 65,000 minimum.

Potter County, traditionally one of the best deer hunting areas in the state, led all counties in buck, antlerless and total harvests during the 1975-76 seasons. Hunters reported taking 4,085 antlered deer in Potter and 4,300 antlerless whitetails, for a total of 8,385 deer from "God's Country."

Following Potter in antlered deer harvest were Tioga, 2,605; Bradford, 2,498; Lycoming, 2,485; and Clearfield, 2,439.

Other leading antlerless harvest counties were Tioga, 2,674; Bradford, 2,632; Huntingdon, 2,365; and McKean, 2,361.

Counties other than Potter leading in total harvest for 1975-76 were Tioga, 5,279; Bradford, 5,130; Lycoming, 4,661; McKean, 4,565; and Huntingdon, 4,564.

The buck total included 52,579 with three or more points and 19,407 spikes, while the antlerless figure included 54,833 females and 11,376 males.

The Game Commission emphasizes that all figures are actual counts of report cards filed by hunters.

388 BLACK BEARS TAKEN BY HUNTERS

Bear hunters harvested 388 bruins during Pennsylvania's one-day season on November 24, according to the Game Commission.

The 1975 harvest was well above the 223 bears taken in the 1974 season. However, much more favorable weather conditions prevailed during the 1975 season.

During the 1975 season the top bear-producing counties were Pike, 55; Clinton, 40; Lycoming, 34; Monroe, 27; Elk, 25; Centre, 24; Cameron, 22; and Tioga, 21.

Resident hunters took 368 of the bears, while the other twenty were bagged by non-residents. Game protectors reported that 175 of the bruins, or slightly less than one half of the total harvest, were males.

INVITATION TO COUNT DEER HARVEST CARDS

Every year deer harvest figures compiled by the Game Commission are questioned, but so far no one who has looked at the report cards mailed in by hunters has challenged the accuracy of the count.

Again this year, the Game Commission extends an open invitation to any interested individual, group or groups to come to commission headquarters in Harrisburg to examine and-or count the report cards filed by hunters.

Broiler production up 20 pct.

HARRISBURG - Poultry production continues to increase over last year, according to the Pennsylvania Crop Reporting Service.

Placements of broiler chicks in the commonwealth for the week ending February 28, were 1,376,000. This represents a six percent increase over the corresponding week a year ago, but a slight dip of five percent from the previous week.

Average placements during the past ten weeks were 10 percent above a year earlier.

In the 21 key poultry producing states, placements were 62,792,000. This is four percent above the previous week and nine percent above the same week last year.

Average placements during the past ten weeks were nine percent above a year ago.

Farmer cooperatives meet

Representatives from local farmer cooperatives attended South Central Regional Meeting in Carlisle on Feburary 20 at the Embers Restaurant. Attending from the local Adams-Franklin-York Council were: Bob Whitman from Agway Feed Mill; Bob Stover Production Credit Association of York; Roy Weaner, Interstate Milk Producers; Jay Waybright of Maryland Milk Producers; John Peters of Knouse Foods; and George Glenn, Leo Weaver, Ruth Ann Orndorff and Dawn Bodenberg of Adams Electric Cooperative. Gil Evans also of Adams Electric Cooperative served as Planning Committee Chairman of the meeting.

The theme of the meeting was to explore the big issues facing farmer cooperatives and the role of consumers and organized labor in the cooperatives' present and future Thomas A Brewer, Penn State University, pointed out issues co-ops face as Public Image, Member Education, Legislation, Growth and Finances. Wayne Bouchard, Technical Sales Representative for Automatic Switch Company, presented the consumer's interest in cooperatives and sited that rising costs falling upon consumers make the farmer and consumers natural allies in fighting these rising costs and business profits

State Pennsylvania Association of Farmer Cooperative programs were reviewed and upcoming events announced by Hal Doran, Penn State Cooperative Specialist, coordinates the PAFC program throughout Pennsylvania

THE GOOD WORD from the Bible

You have heard it was said, You shall love your neighbor and hate your enemy. But I say to you, Love your enemies and pray for those who persecute you, so that you may be sons of your father who is in heaven; for he makes his sun rise on the evil and on the good, and sends rain on the just and the unjust.

Claude Hetherington wins state tomato grower award

Claude Hetherington, of Zion Grove, who produced 785 tons of usable tomatoes on 30 acres, has been named a State Champion Tomato Grower for 1975 in the hand harvest 25 to 50 acre class, according to David L. Kantner, Schuylkill County Agricultural Agent

Hetherington received an engraved plaque for his tomato production and recordkeeping practices at ceremonies during the annual Vegetable Growers Conference on the Penn State University Campus

The State Champion Tomato Growers Club is sponsored by the Penn State Cooperative Extension Service and Pennsylvania tomato processors

Hetherington, a tomato grower for 30 years, qualified for the award by producing an average of 26.17 tons per acre. Tomatoes, cabbage, and potatoes are his most important sources of farm income.

The tomato crop was planted between May 15 and June 15. Spacing was 36 inches between rows and approximately 20 inches between plants. With a 95 percent stand, this was equivalent to about 8,300 plants per acre.

According to Robert F. Fletcher, Penn State Extension vegetable crops specialist, who made the award presentation, a starter solution was applied at planting time. A 6-12-6-2 fertilizer was plowed down on 15 acres with 300 pounds also applied in bands on each side of the row. On the other 15 acres, 1,000 pounds of 6-12-6-2 was all banded with the transplanter.

Treflan was incorporated into the soil before planting and the crop was cultivated four times. Two daughters, Myrtle and Dawn, and Mrs. Hetherington do all the cultivating.

Four acres of Red Rock and 26 acres of 1370 varieties were planted. Local labor was used to harvest the crop. A field supervisor handled the picking operations and there were no serious labor problems at harvest time.

Harvest labor and field management costs amounted to about 30 cents per basket, Professor Fletcher points out. The tomatoes were emptied into boxes and hauled to a loading area where a fork-lift was used to dump the boxes into trailers used for delivery to the processor.

A good pesticide control program was followed, using five insecticide and eight fungicide applications. Two insecticide sprays were put on early with a weed sprayer and the remainder of the sprays were applied by helicopter.

Hetherington attributes his high yield to good local help, I would never use migrant labor again," Hetherington said

In 1976, he plans to expand his acreage to about 55 if processors' contracts are available

Claude Hetherington, left, received the Champion Tomato Grower Award plaque from Robert F. Fletcher, extension vegetable crops professor at Penn State.

$30.2 billion loaned

WASHINGTON, D.C. — Loans made to farmers and farmer cooperatives through the Farm Credit System during 1975 increased 10 percent from the year earlier to a record total of $30.2 billion, according to a report issued today by the Farm Credit Administration.

Loans outstanding at December 31, 1975, stood at $31.7 billion, another record and an increase of 15.8 percent from the $27.4 billion for the System a year earlier. Net worth of the System — represented primarily by members' capital stock and accumulated savings — totaled $4.1 billion at year end, up 13.9 percent from the $3.6 billion a year earlier.

The 10 percent gain in loans made represents a slackening in the pace of farm borrowings from recent years. Figures from a year ago showed loans made increasing by 16.5 percent, while 1973 borrowings through the System jumped 40 percent from 1972 figures.

"Let us never forget that the cultivation of the earth is the most important labor of man.

Nutrena Controlled Release CLS — so different, it's patented

Your cattle will like Nutrena Controlled Release CLS and you'll like the benefits behind this new development in liquid supplements. The patented process controls the release of protein-building ammonia nitrogen in the rumen compared with a conventional urea-based liquid supplement. This improves the feeding efficiency of the urea. And, the slow-down means an extra margin of safety from urea toxicity—that's important when self-feeding liquid supplement.

Nutrena Controlled Release CLS liquid supplement—a product of Cargill research. It's great for dairy herds as well as beef cattle on range, pasture, stalks, stubble or in the feedlot.

Grassland FFA'ers tell 'Food for America' story

Children at the Union Grove elementary school (s) are learning about agriculture this week from Garden Spot High School vocational agriculture students who know from firsthand experience and study what agriculture is all about. The instructors for the elementary students are all members of the Grassland FFA chapter, who are conducting the class in agriculture for elementary school children as part of the FFA's new "Food For America" program

"Food For America" is an effort by FFA chapters across the nation to tell the story of modern agriculture to elementary school children Chapter members are being aided in their effort by a set of instructional resource materials that includes a Farm Art Book and a film provided through the National FFA Organization. The Farm Art Book contains interesting illustrations of agricultural facts that students can color or illustrate themselves while the film - Food From Farm To You - explains in elementary terms how food is produced and ends up on supermarket shelves.

The entire "Food For America" project is co-sponsored through the National FFA Foundation, Inc., by four agricultural businesses: American Breeders Service, Division of W. R. Grace & Company; J I Case, A Tenneco Company; Chemagro Agricultural Division of Mobay Chemical Corporation, and Dekalb AgResearch, Inc.

Funds from the sponsoring companies and from the FFA Foundation General Fund have been used to develop and distribute resource materials and to offset the costs of distributing the film.

"We are concerned that so few young people understand where their food comes from," says Grassland Chapter President LaVern Martin. "Our members are well qualified to help elementary school children learn about agriculture because of the knowledge and experience we've gained in the vocational agriculture courses and by actual experience on the farm and in local agricultural business.

Following the classroom instruction and film on agriculture, chapter members have arranged a tour for the elementary school children to the Bob Book farm. On the tour the children will see and touch live animals and farm crops. For many it will be the first experience on a farm and a highlight of the entire "Food For America" program.

Grassland FFA members participating in the one acre corn contest were (front) Tim Weaver and Tom Wentzel. (Back from left) Linford Weaver, Bill Hughes, Dan Witwer and Rick Groff. The member's yields ranged from 100-175 bushels per acre.

Silver Spurs 4-H meets

The Silver Spurs 4-H club met recently at the home of Carol Kinzer. Jim Glick, president, conducted the business meeting. Two visitors, Patti and Denise Sangrey, were introduced.

Demonstrations were given by Carol Kinzer, Leslie Winpenny and Richard Hecker.

The next meeting will be held at the home of Brian and Mike McCall on April 2. Members enjoyed a taffy pull following the meeting.

What's New

INSURANCE

Trainers, breeders, and boarding farm owners now have a method of protecting themselves against liability when they have animals that do not belong to them and in their custody. "The method," according to Peter Rhulen, vice-president of the Rhulen Agency, Inc., Box 4, Monticello, N.Y., the nation's leading animal insurance specialist, "is called 'Care, Custody and Control coverage'." "All public liability policies," explains Rhulen, "have a very important provision which excludes any animal not belonging to you from your liability coverage. The fact that you are not covered does not absolve you from legal responsibility for an animal's injury or death due to your negligence "

Officers elected for meat federation board

WASHINGTON, D C - The U S Meat Export Federation (MEF) today elected permanent officers and signed a cooperator agreement with the Foreign Agricultural Service of the U S Department of Agriculture

With these steps, the MEF moved closer toward the implementation of a program aimed at development of expanded foreign markets for U S-produced meat and meat products

The MEF is made up of associations and firms from the producer, processor and distributor segments of the red meat industry It and the FAS will jointly carry out market development programs For every dollar of funding provided by MEF, the FAS will provide $2.

At the first MEF board meeting today, Peter Marble, Deeth, Nev , chairman of the foreign trade committee of the American National Cattlemen's Association, was elected Chairman for the coming year Also elected by the MEF board were Vice Chairman, Richard Lyng, president of the American Meat Institute, Washington, D C , Secretary, John Mohay, executive vice president of the National Independent Meat Packers Association, Washington, D C , and Treasurer, Baxter Freese, Wellman, Iowa, of the Iowa Beef Industry Council

In addition to electing officers, the MEF signed a formal cooperator agreement with the FAS It now will be possible for FAS to begin providing funds and to work with the MEF in improving access to foreign markets and in expanding those markets in the years ahead. The new program will be similar to that carried out by the U S. Feed Grains Council

The MEF also named a selection committee, which will screen candidates and appoint a chief staff officer This staff officer, who will have the title of president, will establish a headquarters office in Washington, D C , and will initiate and administer the new program

Marble said the selection-screening committee will welcome applications from qualified persons with administrative ability and a background in foreign trade and the meat industry

The MEF was started several months ago through the united efforts of the American Meat Institute, ANCA, National Independent Meat Packers Association, and National Pork Producers Council

The organization now has a total of 20 member groups In addition to the four charter members, these organizations are the National Live Stock and Meat Board, Iowa Beef Industry Council, Texas & Southwestern Cattle Raisers Association, Nebraska Beef Industry Foundation, Oklahoma Cattlemen's Association, Texas Cattle Feeders Association, California Beef Council, California Cattle Feeders Association, Arizona Cattle Feeders Association, Idaho Beef Council, Wyoming Beef Council, Kansas Livestock Association, John Morrell & Co , Armour & Co , Otto & Sons, and the Iowa Development Commission

Additional organizations and companies are expected to join in the near future More information of MEF and the top staff position may be obtained by writing to MEF at P O Box 3556, Washington, D C 20007

New Literature: Poultry Feed Ingredient Analysis Table

The 1976 Poultry Feed Ingredient Analysis Table is now available from the Nutrition & Animal Health Division of Diamond Shamrock.

Designed as a convenient wall chart, the table shows available amino acid percentages as well as other nutrients present in 74 ingredients necessary for the calculation of feed formulas.

Copies of the table may be obtained by contacting Diamond Shamrock, Nutrition & Animal Health Division, 1100 Superior Ave., Cleveland, Ohio 44114.

Freezer Cleaning

About twice a year, clean the interior of your freezer Don't use strong detergents Remove stubborn stains with a sponge and mild soap and water Rinse with clear water and wipe dry If the freezer has coils on the back, clean about twice a year with a vacuum cleaner or brush Clean the outside of your freezer with a damp cloth or sponge at least a couple times a week

Vegetable Filler

Brussels sprouts get their name from Brussels Belgium, the area where they originated For a zippy taste, try adding a dash of curry powder in the sauces for creamed vegetables And Pennsylvania produces 60 per cent of the nation s 300 million pounds of mushrooms annually

WEX

UNIQUE SURFACTANT
assures superior results
with ag-chemicals

WEX
- Makes water wetter
- Reduces foaming of ag-chemicals
- Helps suspend wettable powders
- Causes greater saturation
- Improves coverage and penetration
- Aids compatibility of specific ag-chemical combinations

Proven on millions of acres during five growing seasons

NUTRIENT RELEASE AGENT
helps you feed your crops

Wex helps your crop achieve its genetic potential by
- Releasing more soil nutrients
- Increasing trace nutrient uptake
- Enhancing fertilizer activity
- Distributing nutrients throughout the root zone

Thereby increasing your real yield at harvest

Like all living things
your crops should be fed properly

Hydra-Hitch

BJ Manufacturing Co., Inc., of Dodge City, Kansas is proud to announce the addition of the Hydra-Hitch to the growing line of BJM products. Designed to pull multiple drill and tillage equipment this unit eliminates the need to buy arger implements to accomodate larger horsepower tractors. Now you can hook smaller implements together and still fold them easily for transport. Available in three different models, the BJM Hydra-Hitch allows you to change from field to road position (and back to field position) right from your tractor seat in a matter of seconds - at a touch of your hydraulic lever.

For further information contact B-J Manufacturing Co., Inc., Box 370, Dodge City, Kansas 67801. Telephone 316-227-8173.

NEW HOLSTEIN BULL BOOK AVAILABLE

A 60-page booklet titled "Holstein Reference Sires" has been published by Carnation Genetics, Hughson, Calif., the international artificial breeding company.

In making the announcements, Robert Strickler, head of the dairy department, said that the directory includes 83 black and white Holstein Friesian bulls and 5 red and white Holstein Friesian bulls.

A total of 46 of the sires are USDA proven, while the balance are part of the battery in the company's young sire program.

Strickler pointed out that information on all the proven sires includes two generation pedigrees, USDA sire summary report, the Genetics Breeding Guide, aAa Codes, and personal recommendations by a member of the Carnation Genetics breeding consulting staff.

Included among the bulls are Betterway Rear Admiral, with a P.D. of +1019; Lazy L Skyliner Wallie, with a P.D. of +947 and "plus" in siring of all physical traits, and Oak-Hill Ranch Boots, with a P.D. of +918.

To make it easier to get answers to further questions on the bulls, the names and addresses of all local key distributors and company sales representatives are included.

Strickler said that the Holstein Reference Sires Directory is available free by writing to Carnation Genetics, P.O. Box 938, Hughson, Ca. 95326, or P.O. Box 437, Watertown, Wisc. 53094.

GRAIN WAGONS

Parker Industries, Inc., Silver Lake, Indiana has announced that new literature has been published describing each model in Parker's complete line of mobile grain handling equipment Separate catalog sheets describing each model are available free from the manufacturer

The new literature encompasses a separate full-color catalog sheet for every model now under manufacture at Parker Industries This includes information on Models 2200, 2500, 3000, 4000 and the Model 1400 Auger, plus, Parker's new auger-unloading Grain Buggy, fifth-wheel rear discharge Grasshopper and its complete line of wagon gear.

Each catalog sheet fully describes and lists specifications for each model. Standard features and optional equipment are also described and illustrated with color photos

To obtain a set of free literature on all Parker mobile grain handling equipment, or any specific model, write Parker Industries, Inc., Silver Lake, Indiana 46982

Sewage for fertilizer experiment reveals some long-term dangers

UNIVERSITY PARK — Municipal sewage sludge from industrial areas contains too much of the element cadmium for safe use as fertilizer on farmlands, soil chemists at The Pennsylvania State University have determined.

Reporting three years of experiments testing sewage sludge on corn and soybeans, Dale E Baker said cadmium could be harmful to the food chain where contaminated sludge is used to fertilize plants producing food for human beings. In some areas of Pennsylvania, Baker and associates have found that sewage sludges with more than 300 parts per million of cadmium have been applied to cropland

"The effects of such additions on crops and ultimately on man are irreversible," Baker affirmed "Two pounds of cadmium per acre, for example, could maintain cadmium in crops at 5 to 10 times the normal levels for up to 100 years."

Results of the Food and Drug Administration's fiscal year 1973 total diet survey found that dietary intake of cadmium in the U. S reached about 80 per cent of the acceptable daily intake for this heavy metal as established by the World Health Organization

Baker reported that soil testing methods have been developed to determine when maximum safe levels of zinc, cadmium, copper, and other trace elements have been reached. Maximum safe levels can be calibrated, he said, for farmers' fields. Such calibration uses results from soil tests, sewage sludge composition, and plant composition.

Cadmium accumulated in the human body, the Penn State scientist pointed out. He added that in certain industrial acres the total intake of cadmium is high enough to associate this element with respiratory disorders such as emphysema, gastric and intestinal dysfunctions, anemia, osteomalacia or softening of the bones in adults, and hypertensive heart disease

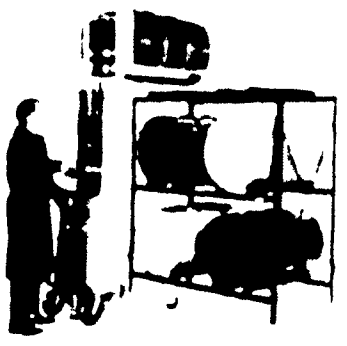
What's New



Safe Drum Lifting By One Man

Weil Drum Lifters are an economical, safe way to handle drums in any plant with moderate to large drum handling requirements. Their rugged construction assures long, trouble-free service, even in prolonged day-to-day use moving and stacking drums. Weil Drum Lifters can be used for an endless variety of other materials handling jobs by simply slipping a low cost accessory platform plate over the lift arms.

Drum Lifters are offered with a wide variety of drive systems, and in heights suitable for 2-high and 3-high drum racks. Specially designed lift arms cradle both 30 and 55 gallon drums securely. All models are painted safety orange, and have bases 43 inches long and 27-½ inches wide. Units have five inch load wheels in front and extra-large eight inch swivel casters in back.

Weil Service Products Corporation, 2434 West Fletcher Street, Chicago, Illinois 60618.

PLOWS DESCRIBED

MILWAUKEE, Wis — A new 12 page brochure from the Agricultural Equipment Divisions of the Allis-Chalmers Corp., describes the characteristics and features of the full line of monoframe plows offered by the company. Covered are the new Model 2500 pull-type, 2000 series semi-mounted and 70 and 80 series mounted plows.

Details are given on new, high-strength designs, stronger hitches and added trash clearance built into the monoframes to meet today's high horsepower, high speed farming techniques. Also described are the automatic reset feature available on several models, which promotes non-stop plowing; spring loaded rubber mounted coulters for extra shock absorption; bolt-on extensions; the exclusive TRACTION BOOSTER system for automatic depth control; and in-furrow or on-land plowing capability of the Model 2500 pull-type.

A copy of the brochure, AED 405-75-07, may be obtained by contacting: Agricultural Equipment Divisions, Allis-Chalmers Corp., Box 512, Milwaukee, Wis., 53201

Food Waste

It is estimated that the average two person household in the United States wastes $80 to $100 worth of food each year. That doesn't include food poured down the drain, ground up in garbage disposals or fed to pets. Waste in the form of food improperly stored, prepared or served, sometimes runs as high as 25 per cent of the food purchased.

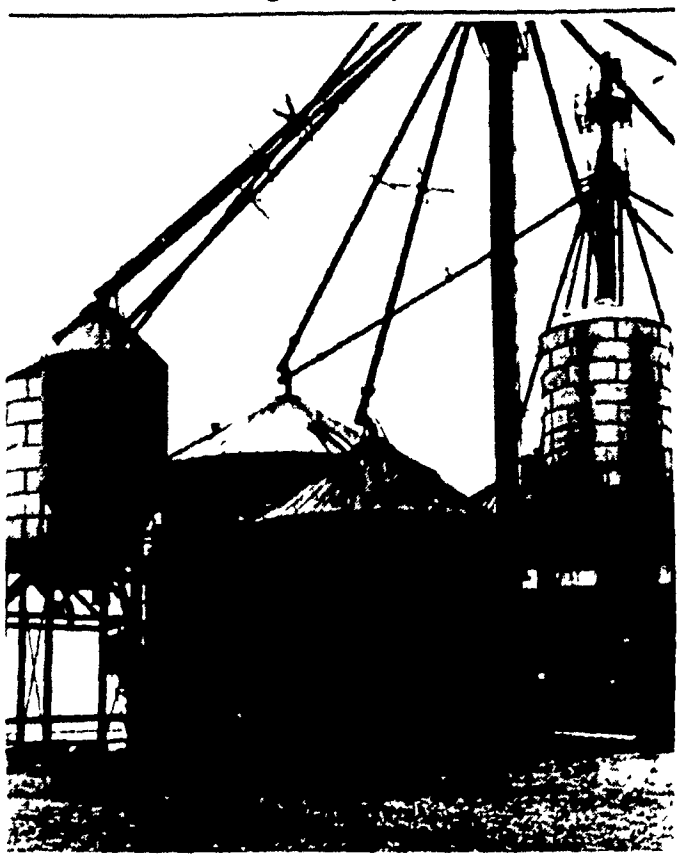
What's New

GALVANIZED STEEL

An improved galvanized steel offering significant improvement in atmospheric corrosion resistance is announced by Armco Steel Corporation, Middletown, Ohio Based on actual ten-year atmosphere exposure tests, the new product offers an average 13 percent improvement in corrosion resistance and will offer important advantages for agricultural applications

Armco officials say the product will carry no price extra It will be priced the same as regular ZINCGRIP STEEL, the company's galvanized steel line.



The difference of the improved galvanized product is the addition of a small amount of magnesium in the zinc spelter for the galvanized coating Armco holds a patent on the new product.

The most significant improvement in corrosion resistance comes in the first year of service. The magnesium addition in the zinc significantly retards coating weight loss in the atmosphere during that first year of exposure. Actual corrosion yard tests show the rate of corrosion of the magnesium-bearing zinc coating is 30 percent less than with regular galvanized during the initial year in both industrial and marine atmospheres. After that, the rates of corrosion are considered equivalent.

New Saddle Tank System Announced By Best-Way

A unique new saddle tank system from Best-Way, Inc. is designed to be mounted on the front of most 4-wheel drive tractors.

Designated the "Fore-Runner", this system features centrifically-spun fiberglass tanks with 400 or 500 gallon capacities, heavy-duty saddles and support brackets, 90 GPM centrifical pump, hose harnesses and the complete control unit.

The "Fore-Runner" is designed for easy use. Front steps allow for easy filling and then fold up for additional ground clearance. The low profile of this system gives excellent field visibility.

Best-Way is a nationally known manufacturer of spraying equipment headquartered in Clear Lake, Iowa. For more information on the "Fore-Runner", contact Best-Way, Inc. Box 22, Clear Lake, Iowa 50428.

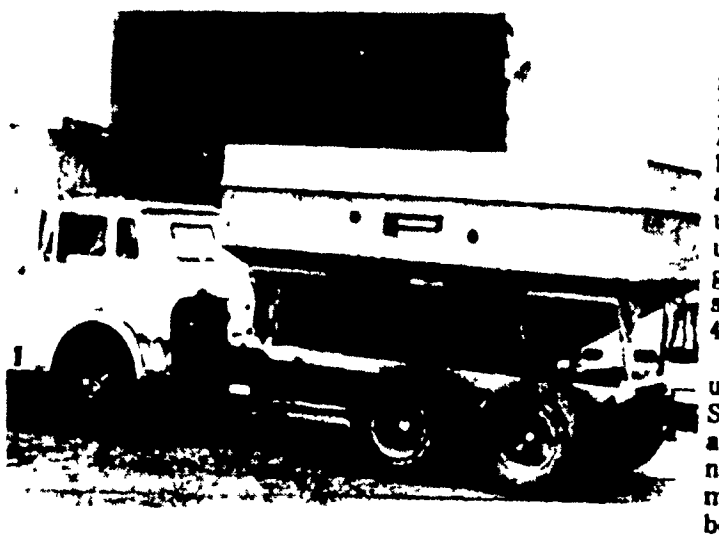
What's New . . .



Super Ox Cart had Fast-Action Discharge;

The Super Ox Cart, manufactured by Parker Industries, Inc. Silver Lake, Indiana, features a 310 bushel bed capacity plus the advantage of center unloading for fast, complete unloading of high moisture grain. With optional sideboards it carries up to 425 bushels.

The convenient center-unloading bed design of the Super Ox Cart helps achieve a more balanced load. The natural force of gravity pulls material to the center of the bed. Big double doors and steep sloped sides speed up discharge of grain at the wet holding bin or elevator. The four big doors can be locked open for desired material flow, then easily released for instant flow stoppage. Versatile design allows material to be unloaded from either side.

Engs, sides and bottom of the Super Ox Cart are formed of heavy 14 gauge prime steel with heavy-duty superstructure members of formed steel plate. All seams are welded and lapped for a smoother inside surface and to provide extra strength. Rear corners are triple reinforced to prevent twisting and splitting.

The Super Ox Cart handles all types of grain, shelled corn, ear corn, dry feeds and bulk fertilizers. For maximum versatility, it can be mounted on wagon gear, truck chassis, or on a fifth-wheel flatbed trailer.

Additional information may be obtained by writing the manufacturer.

New Bulletin Describes Woodsman Land Clearing Machines

KINGSTON, Pa. - The Woodsman, a rugged machine that clears land by cutting a 5'-wide swath through dense brush and trees, is described in Bulletin 6000, recently published by Robert Foundry & Machine Co. According to the bulletin, the Woodsman can clear up to 3 acres of land in a day and easily handle 6" diameter trees.

Many applications for the Woodsman are illustrated in the literature. These include clearing land for construction, utility transmission lines, campsites and parks. In addition, the literature covers other Woodsman applications: Cutting trails, temporary roads, firebreaks, bridle paths and snowmobile trails . . . shredding leaves to enhance composting . . reducing bulkage in landfills.

Also, included in the new bulletin are detailed equipment specs on the self-powered and PTO models available.

Copies of Bulletin 6000 are available by contacting Royer Foundry & Machine Co., Kingston, Pa. 18704.

ABSOLUTE AUCTION

76 ACRE BEEF FARM

MODERN FARM MACHINERY & TRACTORS

3 PICK-UP TRUCKS

What's New

MASSEY-FERGUSON INTRODUCES NEW CHISEL PLOWS

Massey-Ferguson will introduce four new models of chisel plows this Spring The MF 129 chisel plow family consists of a two-rank mounted, three-rank mounted, three-rank rigid pull and a four-rank, three-wheel, two-section flex model

Frames for all four models are constructed of high strength 4 x 4 x ¼ in tubing for long life and rugged use Ranks are spaced 16 in apart to permit high capacity trash flow

Four shank options offer maximum performance under difficult conditions They include high lift trip, spring cushion, and two sizes of semi-rigid shanks, spaced on 12 in centers Gauge wheels are also optional on the mounted models. A Category II or Category III hitch for direct or rapid coupler is standard equipment on the mounted models

A BIT OF ABE LINCOLN'S PHILOSOPHY

You cannot bring about prosperity by discouraging thrift

You cannot help small men by tearing down big men.

You cannot strengthen the weak by weakening the strong.

You cannot lift the wage earner by pulling down the wage payer.

You cannot help the poor man by destroying the rich.

You cannot keep out of trouble by spending more than your income

You cannot further the brotherhood of man by inciting class hatred.

You cannot establish security on borrowed money

You cannot build character and courage by taking away man's initiative and independence.

You cannot help men permanently by doing for them what they could and should do for themselves.

York Co. gal describes life as professional farm wife

Editors Note: Mrs. Gail McPherson presented the following talk during the recent national peach convention.

Has anyone outlined for you the benefits of becoming a "Professional Farm Wife" or a farm woman as the case may be? Or don't you think of farming as being a profession worthy of professional considerations?

After less than four years of marriage to a farmer, I have arrived at the conclusion that I am indeed a "professional farm wife" and that this position is one of necessity rather than extravagance; one of understatement rather than exaggeration.

What is a professional anyway? According to Carl Stevens who teaches a course entitled "Blueprint for professional selling", A profession is any learned pursuit performed for the public good. You will probably agree that farming is something learned from hard work, sweat, tears, success, failure, and experience as well as from books. And if providing food for your countrymen and world isn't for the public good, then nothing is.

Of course, A professional is one who pursues A profession or an occupation for gain. Gain is the key word here. Now usually you might consider lawyers, doctors, musicians as the primary professionals. You have been led to believe that professionals are those who have completed some required liberal, scientific or artistic education and sometimes needed to pass a mandatory examination for certification; those who use mental skills rather than manual skills to make their livings; those who are in some elite category of occupation.

Well, you are already in an elite category. Contrary to media figures which report there are 3½ million farms in this country, about 2½ million of those farms gross less than $2500 a year. Those farmers are not making a living at farming. Those farmers are not pursuing their occupation for gain, are not very professional.

Then about half of the 1 million farms left have less than $10,000 in gross sales - gross, not net.

There are maybe, 235,000 farmers in this country of 235 million people who sell over the $40,000 mark which still includes some off the farm income. But nonetheless, they are the serious farmers, the professionals. They are in the elite .1 per cent of the population. And they feed the 235 million others in America and export to another 150 million people abroad.

And you are their wives!

There are advantages to being a professional farm wife:

1. You will be gaining a working knowledge learning the skill of selling what you produce.

2. You will be directing your inate abilities whatever they may be toward an attainable goal - profit.

3. You will be making a profit while contributing to the common good - feeding the world.

4. And you will be getting out of debt, acquiring security and some luxuries for your family and home as well as for the farm.

It's no secret that farmers are not earning professional wages, although they work longer hours than most of this country's labor force. And it's no secret to you what investment is required before you can even begin to make a living farming. By 1973, farmers had invested a total of 178 billion dollars in american farms.

And if you've ever tried to figure out your return on your investment as well as your yearly net, you know it's remarkable low. According to 1973 USDA statistics, the latest available to me, return on investment for agriculture before deducting the farmer's minimum $2 per hour wage was about 1.1 per cent. After paying himself the minimum $2 hourly wage, the roi was onle ¾ of a per cent.

Part of the problem is that farmers everywhere are not receiving a fair share of the food industry profits. Although the American farmer has met almost every challenge to increase production in the last several decades, weathered the variables of bugs, disease, hail, drought and labor problems; government regulations and market fluxuations have denied him any chance at guaranteed profit.

He doesn't work on cost plus contracts like power companies. He doesn't strike for better wages like teachers and labor union employees. He often must buy retail and sell wholesale like no other businessman does. And because he has been so busy producing and improving his operations, he has neglected all along the necessary promotion of himself and his products in the field of public relations

MR. & MRS. BRUCE R. WISE

Harry H. Bachman - Auctioneer
Lunch by Fontana Union Sunday School

York Co. gal

(Continued from Page 94)

That's what seasons in the sun is all about. As information director for York county farmers' association, county branch of American farm bureau federation, I was able to find an outlet for my interests in journalism and drama learned as a high school teacher. At the second meeting of the board of directors, I suggested the slide presentation you will be seeing this morning as an alternative to a speaker at the annual meeting in 1974. I really didn't believe they would take me seriously and I never dreamed I would be putting it together. Within a week my four month old gretchen was riding the back pack scouring the county with me and two young photographers for pictures and information about the highly diversified farming operations in our area.

Now, what does all this mean for you? Most of you won't be going home to make a three-screen slide show. I'm not advocating that at all. But any effort you put forth, any contribution you make toward promoting agriculture in general and peaches in particular, in a professional manner, will ultimately reap financial benefits for your industry and for your farm.

After all we farmers are in a minority, no matter how elite our profession may be. And it's easy for those bigger than farmers to bully us, especially since we aren't very organized in the sense of unions.

So we are beset by bureaucrats; bombarded by inspectors who must shuffle through their fine print books to find something wrong with our setups; banned from using chemicals that never killed our great grandfathers; accused of killing off the few people who will work for us for their livings; insulted with accusations that we intend to ruin the land from which we derive our sole livlihood; and deprived of a decent and favorable atmosphere in which to conduct the business of producing food.

The ultimate irony is that in this day and age where food shortages are a real concern and often an imminent threat, the man who produces food must defend this right to do so. And in that defense he is taken away from the business of prodution.

If our men are to be allowed to accomplish the work they have chosen to do, they must not be forced into corners of compliance with bureaucratic authority.

They cannot work in a courtroom, at a regulatory hearing defending themselves or behind bars for refusing to do the unreasonable. They cannot work confined in astronautical garb or protected to death by roll bars that ruin their crops. They cannot improve their product without funds for research.

They must be permitted to use the materials that assure them the best product possible to meet existing quality standards at a cost that won't force them out of farming. And they must be allowed to make a profit, which is a six-letter word not a four-lettter word.

That's where you can held. If you want to preserve your life on the land; if you want to insure enough food for now and future; if you believe in your husband, his profession; then you must become a professional partner to speak out when he's working at home, to cultivate relationships with the media, to meet with and convince legislators the country needs farmers, to promote peaches all year round and advertise when the crop is ready to move, to inform the non-farm population about your needs and problems and services as well as keep the books, work in the market or packing shed, drive the tractor, mow the orchard, drop everything to run for parts, feed the family at the packing house, share your ambitions and goals with your children and clean the house if there's time.

In any event, if you hope to make a living in farming, you must become a professional and work for the common good of food production, and distribution, and sales and your own personal gain.

Don't vent your anger over the back fence complaining about your state in the economic affairs of this nation. Don't cop out by selling out and living less than the life you want. Exonerate your exasperation with some constructive imput into the industry. Become a **professional!**

Remember, all professional farmers make up that .1 per cent of the American population. Peach producers are a real minority in that .1 per cent. If we farmers don't try to understand the problems of all farmers, if we don't help each other, we'll be picked off separately by the bureaucrats and consumers who think they know more about our profession than we do.

Tractor Club meets

A tractor safety course will be conducted for 14-16 year old youth who are interested in becoming certified for farm employment. To perform certain hazardous farm jobs, youth between the ages of 14 and 16 years of age must be certified. This law does not pertain to children who are working on their parents' farm.

The course emphazised safety and it familiarizes youth with tractors and farm machinery. It combines classroom insturction with actual driving experience. Starting on March 16, classes will be conducted on Tuesday and Thursday evenings for four consecutive weeks; the youth will be tested and certified on a Saturday around mid April. Classes will be conducted in the Oxford and West Grove area. Evening sessions will begin at 6 and 7:00 p.m. For more information, call 696-3500.

Some people believe that if the first robin you see in the spring flies up, you will have good luck for the rest of the year But if it flies down, you won't!

AUCTIONEERS:

Doty Remsburg and Norman Hill

Manure equipment shown

An invitation is extended to all farmers to attend an educational program on Manure Storage Systems and see various types of Manure Handling Equipment in action on Friday, March 19, 1976 at the John D. Cassel Farm, R2, Hummelstown, according to John P. Harris, county agent - agriculture.

Gerald Bodman, Penn State agricultural engineer, will present a program at 10:00 a.m. on various types of storage systems and economics of each storage system. His discussion will also include DER regulations and requirements.

Over the lunch hour, various agitator pumps will begin agitation of the manure in the Cassel's earth bound storage unit. At 1:00 to 3:00 p.m., or later, manure will be pumped from the storage unit by different pumps and spread onto fields by various types of spreaders.

Types of equipment to be demonstrated will be a Liquivator, Vertical Pit Pump, Self Loading Spreader, Lagoon Pump, Spreader - Injection unit and a Vacuum Tank.

In addition to this, other equipment will be on display from 10:00 a.m. throughout the entire day for observation.

Lunch will be sold by a local church. This meeting is open to the public. The John Cassel Farm is located on North Hoernerstown Road, North of Hummelstown. Phone is 566-8022.

The meeting is open to the public.

Night Lights

On a clear night there are between 2,000 and 2,500 stars visible to the naked eye. Many more objects can be seen with the help of binoculars or hand-held telescopes. Star clusters can be seen and divided into separate identifiable bodies. Because of the rotation of the earth and her movements with those of other planets relative to the sun, the star canopy is continually changing.

Resolutions considered at Pomona Grange meeting

By JUDY MITCHELL
Berks Correspondent

LEESPORT - A total of 185 persons attended the all-day meeting of the Pomona Grange No 43 at the Berks Agricultural Building on March 6. Saturday was designated as Youth Day for the Berks County Grange and of those members present, 33 were Junior members ranging from ages five to 14, and approximately one-quarter of the total attendance was comprised of Youth Group members who range in age from 14 to 35 years Representatives of the Youth Group conducted the meeting with the regular County officers standing by their side. The highlights of the meeting were the passage of two major resolutions by the membership, the presentation of subordinate Grange awards and a Literary Program presentation

Regarding State Bill 1266 which would amend Section 1501 of the School Code to allow that the fulfillment of the 180-day requirement for pupil instruction in Pennsylvania public schools be waived in the event of a work stoppage or strike, and that the school year would be the actual number of days taught for the affected district, the Pomona Grange No 43 passed a resolution to urge the passage of the bill with the amendment that "the state reimbursement to the school district be prorated on the actual days of instruction if it is less than the 180-day school year," providing an incentive for the school board to have 180-days of instruction.

Another resolution considered by the group was in regard to Lady Bird Johnson's Highway Beautification Act passed in 1965. The Grange members voted to support an amendement to the Act which would allow small business establishements such as restaurants, motels, hotels, and service stations to erect billboards, provided they are properly maintained, no closer to the highways than the 660-foot distance now required by the Act for any sign not in commercial or industrial zones or on premise properties The Grange members agreed that the Act as it stands is a detriment to tourists who depend on billboards for locating food, fuel and lodging along their travel routes, and that it discriminates against the small businessman because of the prohibitive cost for them of erecting a sign large enough to be seen at a distance of 660 feet.

Following the awarding of Honorary Grange Memberships to Robert Kelly, Arline Herring and Paul Miller, the Youth Group presented the Literary Program entitled "Tour the U.S.A." In addition to several group efforts, the program included a piano solo by Barry Driesbach, the "Gettysburg Address" by David Brown, and a duet, "Gold Bless America," performed by Jane Hill and Jeffrey Wetzel.

FEEDER PIG SALE

SATURDAY, APRIL 3, 1976

2½ miles South of Bethel from US 22 and 6 miles North of Myerstown, Pa along US 501

Alfalfa management tips given

By DIETER KRIEG

LANCASTER — "Last year was a disastrous year for hay making in much of Pennsylvania," John Baylor told visitors to the Crops and Fields Day held here recently.

Considering that the state's hay crop is valued at $200 million annually (a crops value figure only exceeded by corn), the Penn State agronomy specialist believes it's pretty important for farmers to manage their hay fields for optimum production.

"There are many breakthroughs coming," Baylor noted at the conclusion of his speech, "which will make hay making less of a risk and more profitable." One of the newer techniques which is already in use is chemical preservation of hay. If these chemicals — usually propionic or acidic acid — are used properly, Baylor believes the preservation technique stands a "fairly good chance of success."

The crops specialist was very encouraged and enthused with a forage analysis service the University expects to have available before too long. The program will reportedly give buyers and sellers of hay more to go on that just the "eyeball test." Also on the drawing board is the infrared crop analyzer which will warn agriculturalists of problems before it's too late. But since some of this is still in the future, Baylor advises that haymakers use the best management techniques which are available today.

One of the first things he pointed out was what he considers to be the best way of avoiding hay crop losses turn it into silage instead.

In explaining chemical preservatives, he noted that several important factors must be kept in mind if satisfactory results are to be obtained. They are: 1. uniform coverage of the hay, 2. moisture of hay being baled should not be much over 30 per cent, 3. use the preservative at a rate of about 20 pounds per ton, and 4. apply where it is the most practical (usually at the throat of the baler).

In stressing the importance of Pennsylvania's and the U.S.'s hay crop, Baylor noted that the average dairy cow receives 23 per cent of her nutrient requirements from hay, dry cows 29 per cent, and beef cattle 16 per cent. Last year the hay produced in the U.S. had a value of $5 billion.

The Penn State agronomist cited the following steps for high yielding hay fields:

1. Fit the crop to the soil; 2. use high quality seeds and varieties, 3. use compatable mixtures (he announced that a grass-alfalfa mixture is definitely to the farmer's advantage under most conditions and recommends the practice); 4. get good stands — never place seeds deeper than a measurement equal to five times its diameter; 5. band seed; 6. eliminate competition from weeds; 7. lime and fertilize for yield persistence; 8. test your soil; and 9. manage for persistent stands He particularly stressed the necessity of having a good fertility program and fertilization rates which are conducive to high yields for long periods of time

"Potash is the key to good alfalfa stands," Baylor said For Lancaster County he recommends approximately 240 pounds per acre — but this varies and to really find out the farmer should test his soil and evaluate his management program. Alfalfa stands should be managed for persistent stands and to enable them to get through stress periods, he noted.

The proper time to cut hay was outlined by Baylor. Experiments at Penn State indicate that the most dry matter is obtained if a cutting interval of 40 days is followed. But as everyone knows, that doesn't make for the best quality hay. The top protein level is reached at about 30 days when it's around 25 per cent. Ten days later it's down to around 19 per cent, Baylor's figures showed.

In figuring when to cut hay, Baylor advised that the farmer consider TDN, protein, and the animal's performance. According to Penn State's findings, the first cutting should occur around the time the plants have reached the full bud to early bloom stage. The second cutting should follow 35 days later, followed by the third cutting 37 days later and a fourth cutting after 40 days. Baylor cautioned that late August and early September is a critical time for alfalfa management. As shown by the above schedule, Penn State recommends that the cutting intervals increase as the season progresses

Sinking Land

According to reports by the United States Geological Survey, land subsistence, or sinking of the land surface, is taking place in many parts of the nation and could become more prevalent in the future One report notes that at least 4,300 square miles of California's San Joaquin Valley has subsided more than a foot since the 1920's Similar subsistence problems in varying degrees have also been observed in parts of Louisiana, Arizona and Nevada

In the Swing

Being in the swing used to mean relaxing on your front porch Home-made jam is what you get when you start that breakfast argument with your wife That's the time your cereal will turn crisp, crackle and soggy So, don't jump out of bed so fast in the mornings, you're likely to sprain your ankle

FOOD AT SALE

SPECIAL SPRING COW SALE

MELVIN KOLB, INC.
THURSDAY, MARCH 18, 1976
AT 12:00 NOON

At my Maryland Farm Sale Barn, located ½ mile Northwest of Woodsboro, on Route 550, Frederick County.

150 HEAD

Sale consisting of 50 head of top quality Purebred cows shipped from Canada, New York State, Pennsylvania and Maryland. Some are classified and have D.H.I. records and are from some of the most popular sires of the Holstein Breed.

50 head of the best grade cows you ever saw in one barn, milking from 50 to 100 lbs. a day. Many of them milking in the 80 lbs.

50 head of nice first calf heifers all just fresh or close. Some Purebred and others are grades. Some milking 60 lbs. per day. Also summer cows. A few good heifer calves.

A few highlights of this Sale: A 2 yr. NO-NA-ME FOND MATT daughter from a dam 283d 14119 490f, bred to a son of ARLINDA CHIEF, his dam as 5 yr. 348d 28059 3.6 1022f. Three (3) 2 yr. old HILLTOP APOLLO IVANHOE daughters, 2 fresh with heifer calves by their side from a son of APOLLO. Good big heifers. A 4 yr. old PACLAMAR ASTRONAUT daughter fresh, as a 3 yr. old 317d 12898 4.1 529, dam as 3 yr. old 16049 55 f. 9 first calf Purebred heifers all son of SEILING ROCKMAN from one herd in Canada. 4 SEILING ROCKMANS, CARNATION FIRST MILLION, DUKE KENNDALE CENTURION, SIREDALE BUCKY T, NUNEDALE ORGINATOR, GLENAFTON RAG APPLE HAGEN, WAYBROOK SIR WINSTON, HILLTOPPER REFLECTION CHARLES, COLLINS CREST BUDDY BURKE, RUQUA IVANHOE FOBES.

If you need cows please come to the Sale and you will get better cows for less money. All cattle hand picked by us.

Any farmer that is moving or starting to farm - we can take good care of what you buy until you move. All cattle T.B. tested and Brucellosis tested within the past 30 days.

Sincerely,
MEL KOLB Sale Manager

PURINA

COW CHOW

38%B

NON-UREA CONCENTRATE

to give your cows the energy and protein they need for top production at low cost!

6 WAYS BETTER

1 - Strict Quality Standards.

All ingredients, including soybean oil meal, that go into Purina Dairy Concentrates are carefully inspected to make sure each comes up to Purina's strict quality standards.

2 - Uniformly High Palatability.

Because of the uniformity of Purina Dairy Concentrates, palatability is high and remains constant.

3 - Accurate Mixing.

The highly specialized equipment and micro-mixing processes employed at Purina Chow plants help assure that Purina Concentrates are accurately and completely mixed so that every bite contains balanced nutrition.

4 - Balanced Nutrition.

All Purina Concentrates contain the proper balance of nutrition because they are formulated and carefully tested by Purina's top team of Dairy scientists.

5 - Uniform Protein Content.

Purina Dairy Concentrates are not subject to wide variations in protein content due to heating, processing and variations in hull content.

6 - Service From Your Purina Dealer.

When you buy Purina Dairy Chows from your Purina dealer you are doing business with a man who cares about your success with the Purina Chows he offers his customers. He firmly believes service is an important factor in the success of both his customers and his feed business.
